

“The Saint-Petersburg state university”  
the faculty “Applied mathematics – control processes”

The additional  
information materials  
for the defence of the dissertation

*“The cognitive modeling technology  
for the system analysis of the information-educational environments”*  
on the competition of scientific degree of the doctor of technical sciences  
on the spec. 05.13.01 – “The system analysis, control and information processing”

The scientific supervisor:

the professor of the chair “Information systems” (“IS”)  
of the faculty “Applied mathematics – control processes” (“AM – CP”) of “SPbSU”,  
the member of “The American mathematical society” (“AMS”),  
doctor of physical-mathematical sciences, professor *Kvitko Alexander Nikolaevich*.

The applicant:

“the author of the unique technology” of cognitive modeling  
for the system, financial and complex analysis  
at the micro-level” (“AUT CMT SFA”) *Vetrov Anatoly Nikolaevich*.

RF, Saint-Petersburg city, 2023 y.

## **The existing contradictions and the priority aspects of informatization**

- the technologies, being the basis of the existing means of training and training-methodical complexes practically do not take into account the features of information processing by the trainee as the subject of training;
- the improvement of organization and technology of the process of the automated training causes the need of the analysis of efficiency of functioning of the information-educational environment with taking into account of the individual features of the subjects of training (physiological, psychological, linguistic and etc.);
- the requirements to the modern information-educational environments initiate monitoring, the realization of accumulation and expeditious data processing, characterizing the individual dynamics of change of the indicators of quality of the formation of knowledge of the trainees.

## **The relevance of the theme of the dissertation research**

is explaining by the evolution of priorities from outside of the state and international bodies regulating the policy of development of the system of education and the informatization of educational sphere, the extension of requirements to the synthesis of the information environments of educational establishments, the imperfection of scientific-methodical and technological device for the support of the analysis and assessment of efficiency of information exchange between the subjects and means of training, the need of creation of the universal scientific approach (method and technology) to the assessment of quality of training, and also the continuous development and innovations in the field of the information technologies.

**The purpose of research is**

the increase in the efficiency of functioning of the information-educational environment of the automated (remote) training system due to the realization of the individually-oriented formation of knowledge of the trainee with the use of the adaptive generation of educational influences based on the parametrical cognitive models block.

**The object of research**

the information-educational environment of the automated (remote) training system of educational establishment.

**The subject of research**

the automated (remote) training system with the properties of adaptation based on the parametrical cognitive models block.

**The methods of research**

- theoretical – the theory of systems, the system analysis and modeling, the theory of control, structuring and representation of knowledge, engineering psychology and pedagogics;
- experimental – the applied methods of theory of information, the physiology of sensory systems (analyzers), cognitive psychology and applied linguistics.

The achievement of the purpose of research realizes **the complex of research tasks**

- the analysis of the theoretical bases of construction of the automated IEE of the adaptive training with the model of the subject of training at the base of the theory of automatic control, the organizational models and technologies of interaction of the subjects with the means of training;
- the development of the structure of IEE of the automated (remote) training system with the properties of adaptation based on the parametrical cognitive models block;
- the creation of the cognitive modeling technology for the system analysis and the increase of efficiency of functioning of the automated IEE;
- the synthesis of the parametrical cognitive models block as the inf. basis of the system analysis: the formation of CM of the subject of training and CM of the means of training in the basis of IEE of ART;
- the realization of the complex of programs for the automation of research tasks, including: the adaptive electronic textbook, the basic and applied diagnostic modules.

**The main scientific results**, submitted on defence:

- the structure of the information-educational environment and the principles (algorithms) of functioning of the components of the automated (remote) training system with the properties of adaptation based on the parametrical CM block [**slides 1.1–1.8.3**];
- the cognitive modeling technology, including the technique of its use, the recommended innovative bases (models) and the algorithm of formation of the structure of the cognitive model, the techniques of research of the parameters of the cognitive models and the algorithm of processing of a posteriori data of testing [**slides 2.1.1–2.7.2**];
- the structures of the cognitive models of the subject of training and the means of training [**slides 3.1–3.8**];
- the complex of programs, including the adaptive electronic textbook (the individually-oriented generation of educational influences by means of the adaptive representation of information fragments processor), the basic diagnostic module (the estimation of the level of residual knowledge of a trainee) and the applied diagnostic module (the diagnostics of parameters of the cognitive model of the subject of training) [**slides 4.1.1–4.20.1**];
- the statistical justification of practical use of the received results (by means of preliminary processing of a posteriori data, the secondary processing of selections of a posteriori data: some results of the regression analysis, the discriminant analysis, multidimensional scaling and the factor analysis) (\*) [**slides 5.1–5.6.2**].

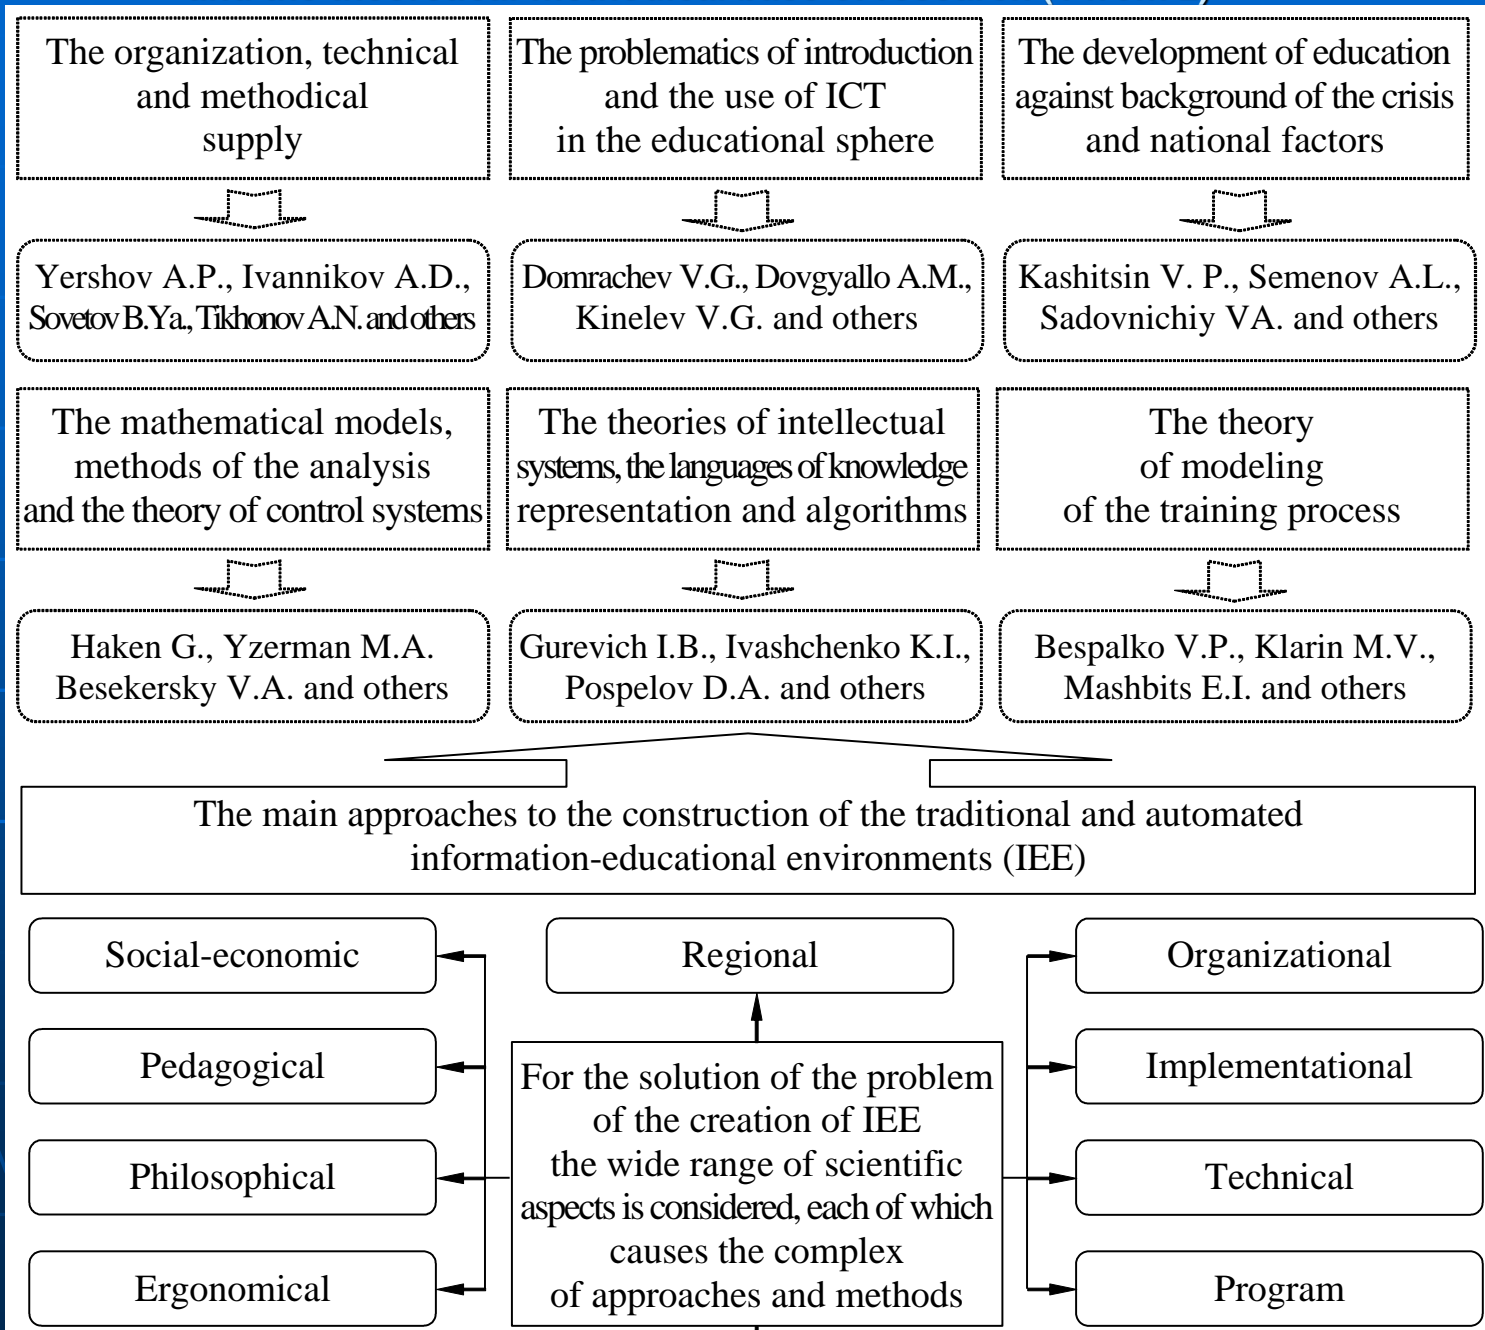

**The reliability of the scientific results of dissertation research is confirmed by:**

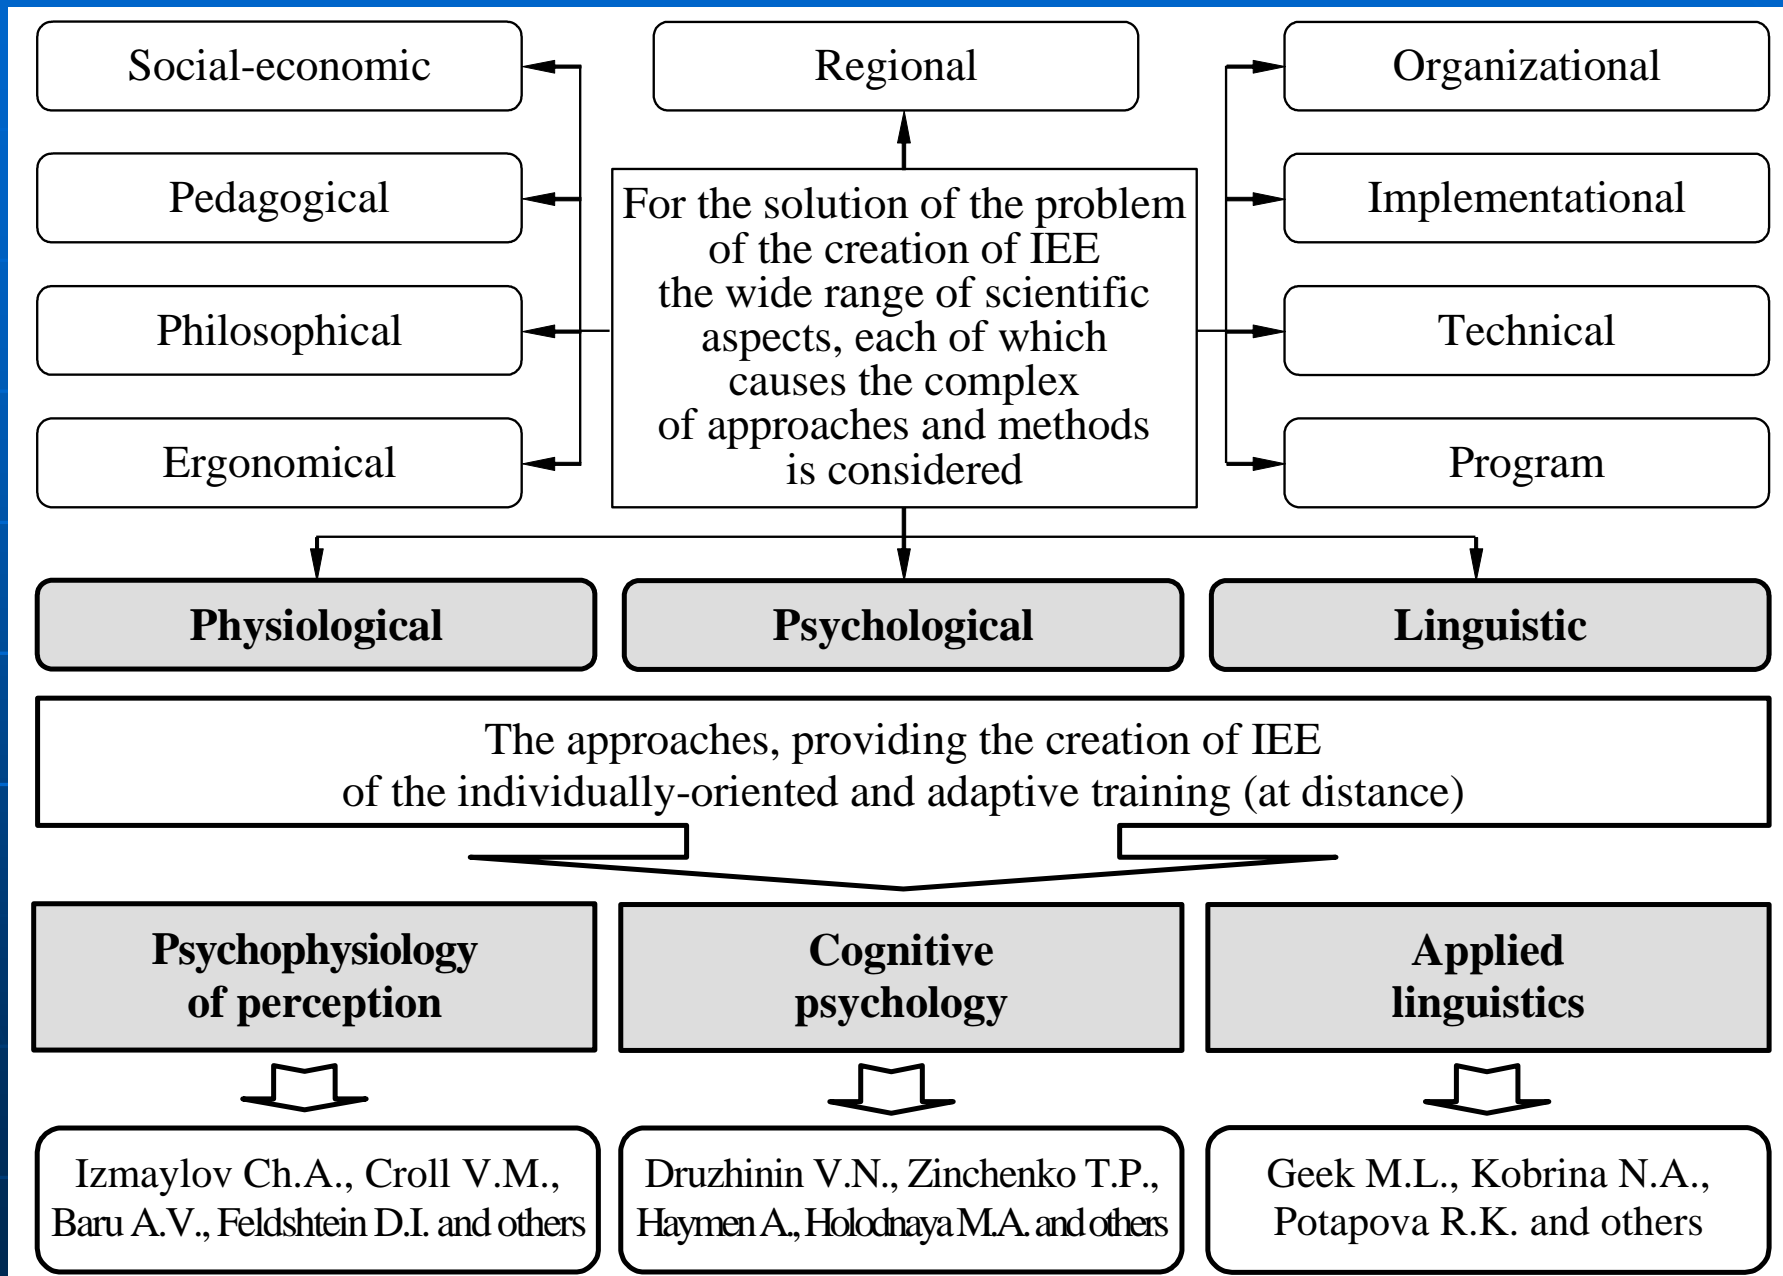

- the system approach to the description of the selected difficult object of research;
- the correct use of fundamental provisions of the theory of information, physiology of sensory systems, cognitive psychology, applied linguistics and ergonomics;
- the approbation of elements of the dissertation on the seminars and conferences of “IHEAS” and “RAS”;
- the introduction of results in the learning process of “SPbSETU “LETI”” and “IBI”, the reasonable application of experimental methods and the strict logic of carrying out of the experiment;
- the results of statistical processing of a posteriori data, training of 10 diploma students.

**The basic results of diss. were publ. in 52 on 2007 y. (106 on 2012 y.) [265 on 2018 y.] scientific works:**

- 01 textbook and 03 methodical instructions to the lab. works on the discipline “Computer science”;
- 01 textbook (10 volumes) on the discipline “Finance, monetary circulation and credit”;
- 02 units in 01 coll. scientific monography of “IHEAS” (with formal coauthors-teachers);
- 04 (10) learning manuals and scientific monographies (with coauthors-diploma-students);
- 12 (29) [49] learning manuals and scientific monographies (without coauthors);
- 01 (02) report(s) on the individual initiative SRW (2003-2005 y. and 2006-2008 y.);
- 01 appendix to the report on the individual initiative SRW (2003-2005 y.);
- 05 (09) [14] scientific articles in the scientific journals, recommended by “HAC of RF”, from them 00 (05) scientific articles were deposited in “VINITI” of “RAS”;
- 22 (48) [182] scientific reports in the materials of 11 (24) [39] int. scientific conferences;
- 04 copyright certificates about deposition and registration of the works – the objects of intellectual property in “RAS” (RF, Moscow city).  
In 2005-2007 y. (2012 y.) [2018 y.] the norm for the candidate (doctor) of techn. sciences is executed (it was required 02 (10) scientific articles in scientific journals from the list of “HAC of RF”).

# The scientific aspects of informatization of the information-educational environment and the theoretical-methodical base of research (1 from 2)

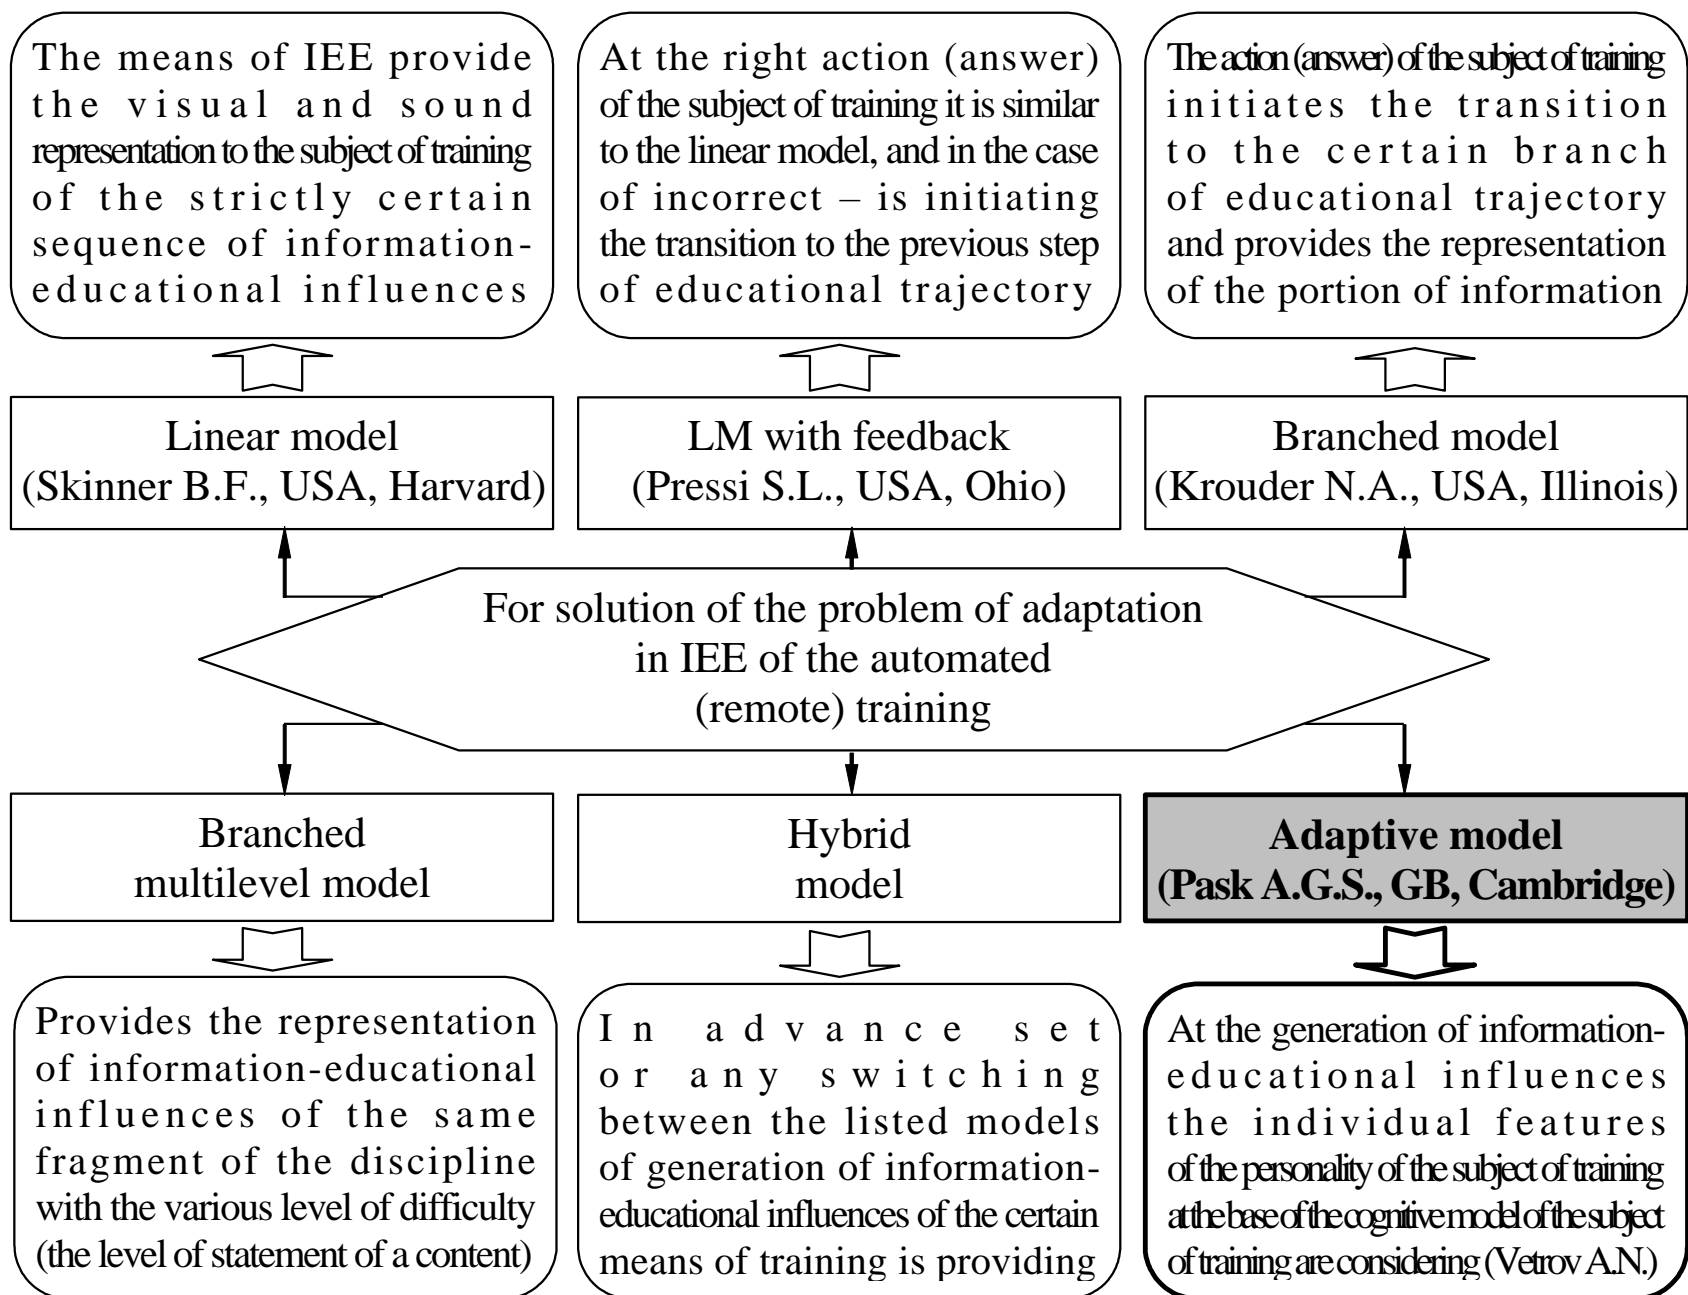

# The models of organization of interaction of the subjects and means of training for a solution of the problem of adaptation in the information-educational environment

1.4.1

The classical technologies of the organization of ART are not oriented on the individualization of training and do not meet the modern requirements to IEE of a new generation

The class-lesson technology

The design-group technology

The technology of the correspondence training

The individual orientation of information interaction between the subjects and the means of training in IEE is reaching due to the use of a set of technologies

The technology of the individual training

The technology of the individualized training

**The technology of the adaptive training**

Realizes the topological scheme of information interaction “the subject – the means of training – (the teacher)” at the studying of educational trajectory in IEE

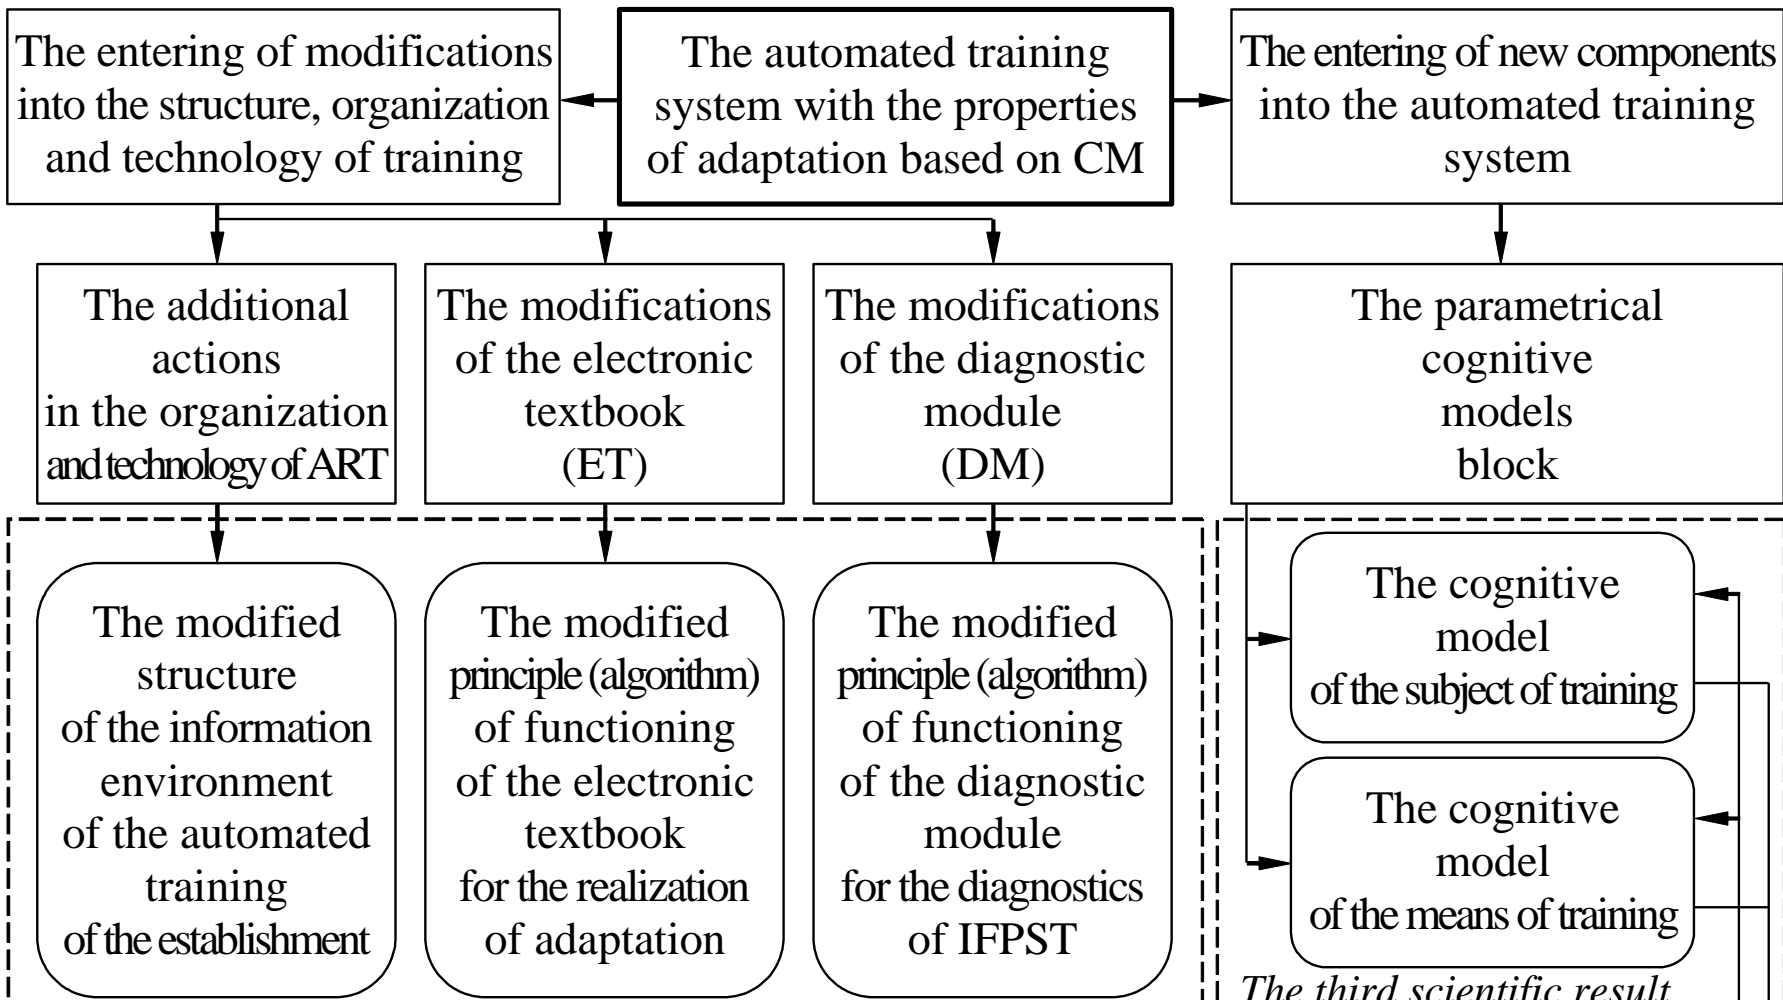

Allows to take into account the individual features of the personality of the subjects of training during the educational process, realized in the traditional or IEE of ART

Allows to realize the contour of adaptation in IEE of ART based on the parametrical cognitive models block of the subject and the means of training, offered in this work

# The complex approach to the synthesis of the information-educational environment of the automated training

with the properties of adaptation based on the parametrical cognitive models block (1 from 2)

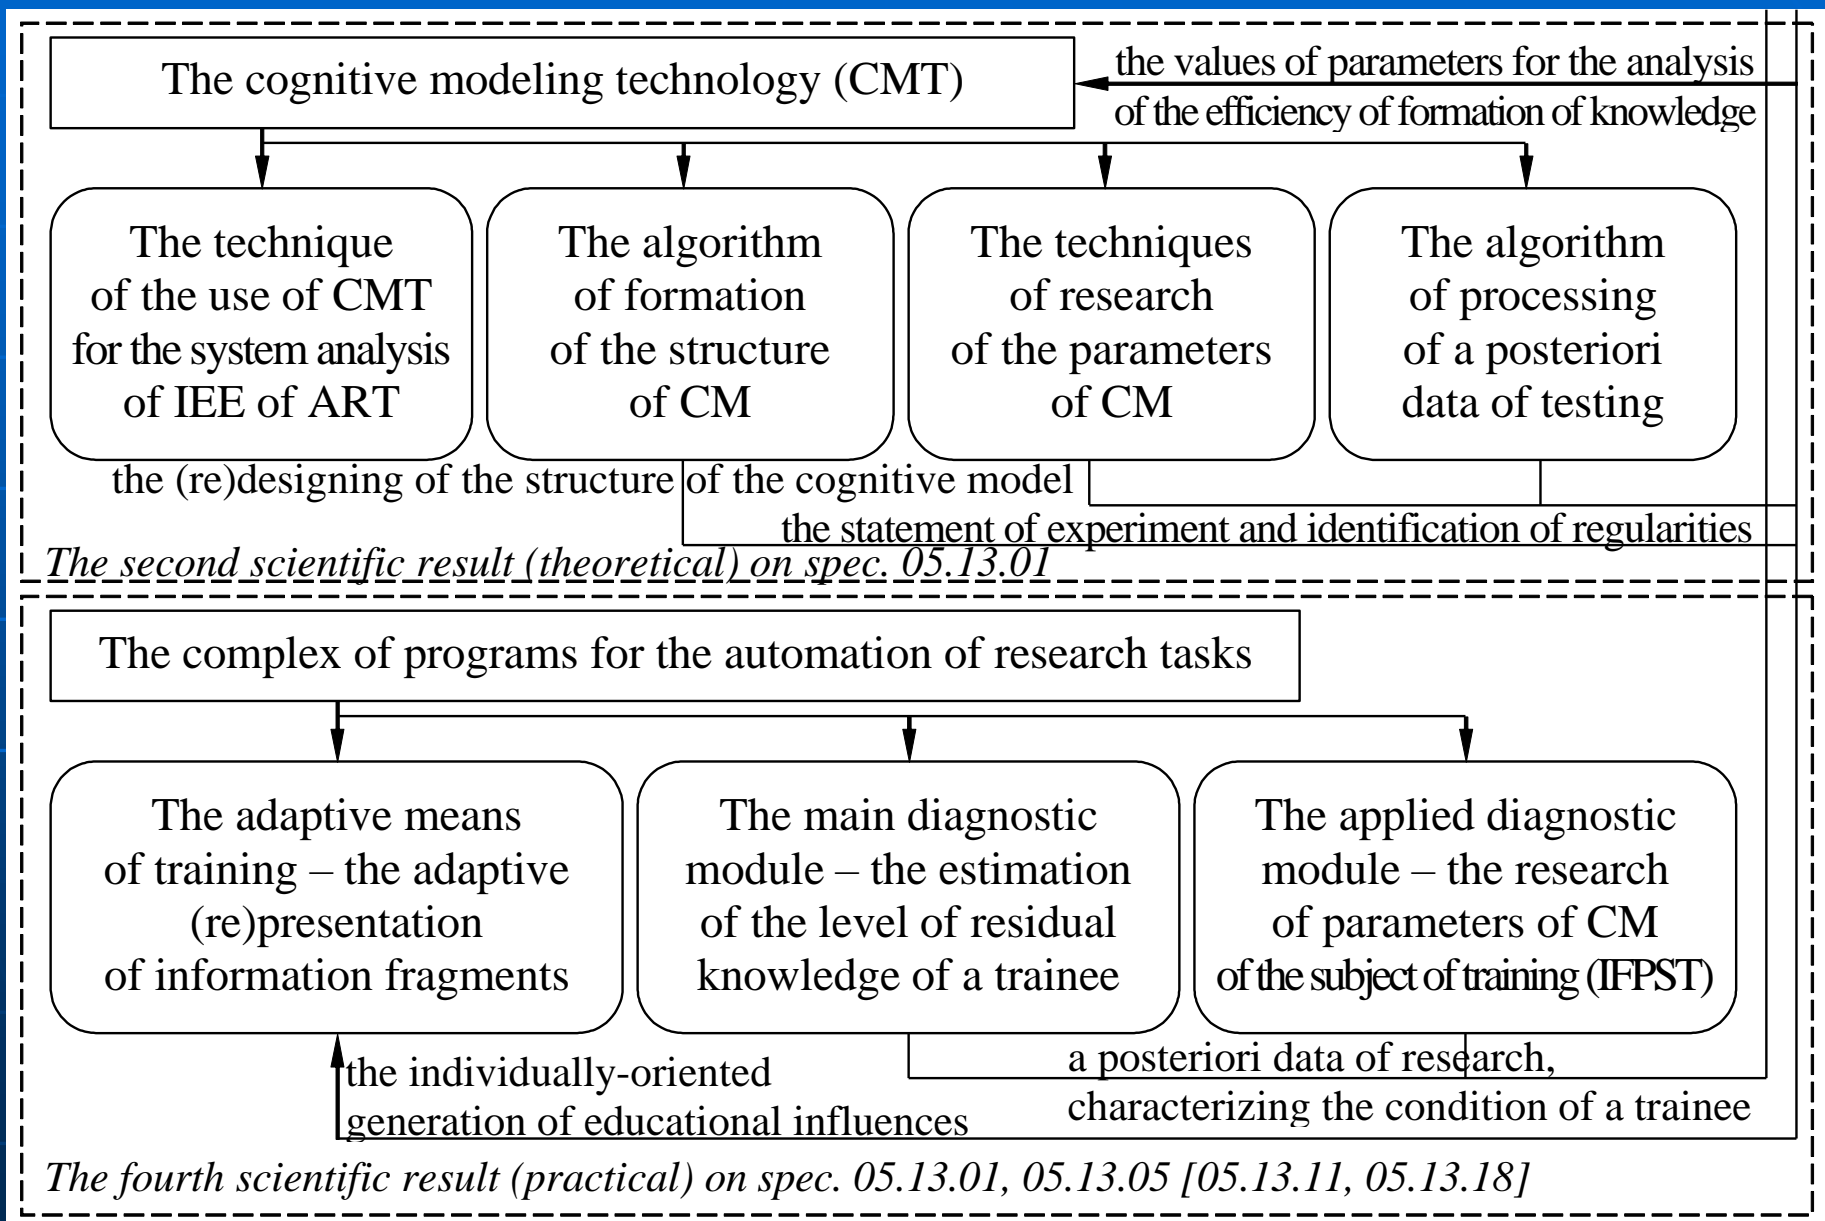

The solution of a complex task of the synthesis of the information-educational environment (IEE) of the automated training with the properties of adaptation based on the cognitive models block

*The first scientific result (theoretical) on spec. 05.13.01*

*The third scientific result (theor.) on spec. 05,13.01 and 19.00.02*

The complex approach to the synthesis of the information-educational environment  
of the automated training  
with the properties of adaptation based on the parametrical cognitive models block (2 from 2)

The synthesis of the automated training system with the properties of adaptation based on the parametrical cognitive models block demands the elaboration of complex approach

The modification of the structure and principles (algorithms) of functioning of the components of the automated training system for the realization of adaptation based on the cognitive models block

The cognitive modeling technology (CMT)

The technique of the use of CMT and the algorithm of formation of the structure of CM

The cognitive models of the subject of training and the means of training

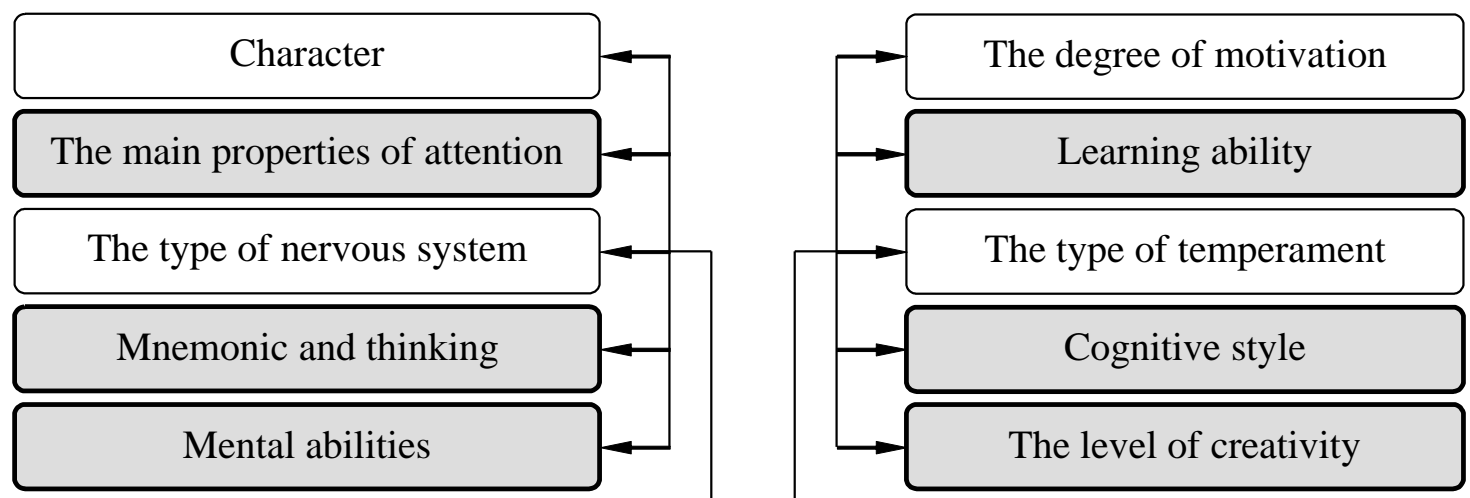

Is universal in relation to the object of research, represents the iterative cycle, including a set of stages and allowing not only to receive the primary representations, but also to carry out the structural analysis

Are developed for the formalization of the sequence of the use of the cognitive modeling technology with the purpose of construction the structure of the cognitive model for the tasks of the system analysis of the information-educational environment

Concentrate in the own basis a set of the parameters, characterizing IFPST (CM of the subject of training) and the technical capabilities of the means of training, on the basis of which the generation of information-educational influences (CM of the means of training) is realized

The main requirements, presented to the structure of the cognitive models of the subject of training and the means of training

The realization of technology of the adaptive training initiates the accounting of specific features

At developing of the structure of the cognitive model it is necessary to take into account a set of specific requirements

Relevance

IEE must consider only those individual features of the subject, which are essential for achievement of the planned purposes of the training process taking into account IFPST

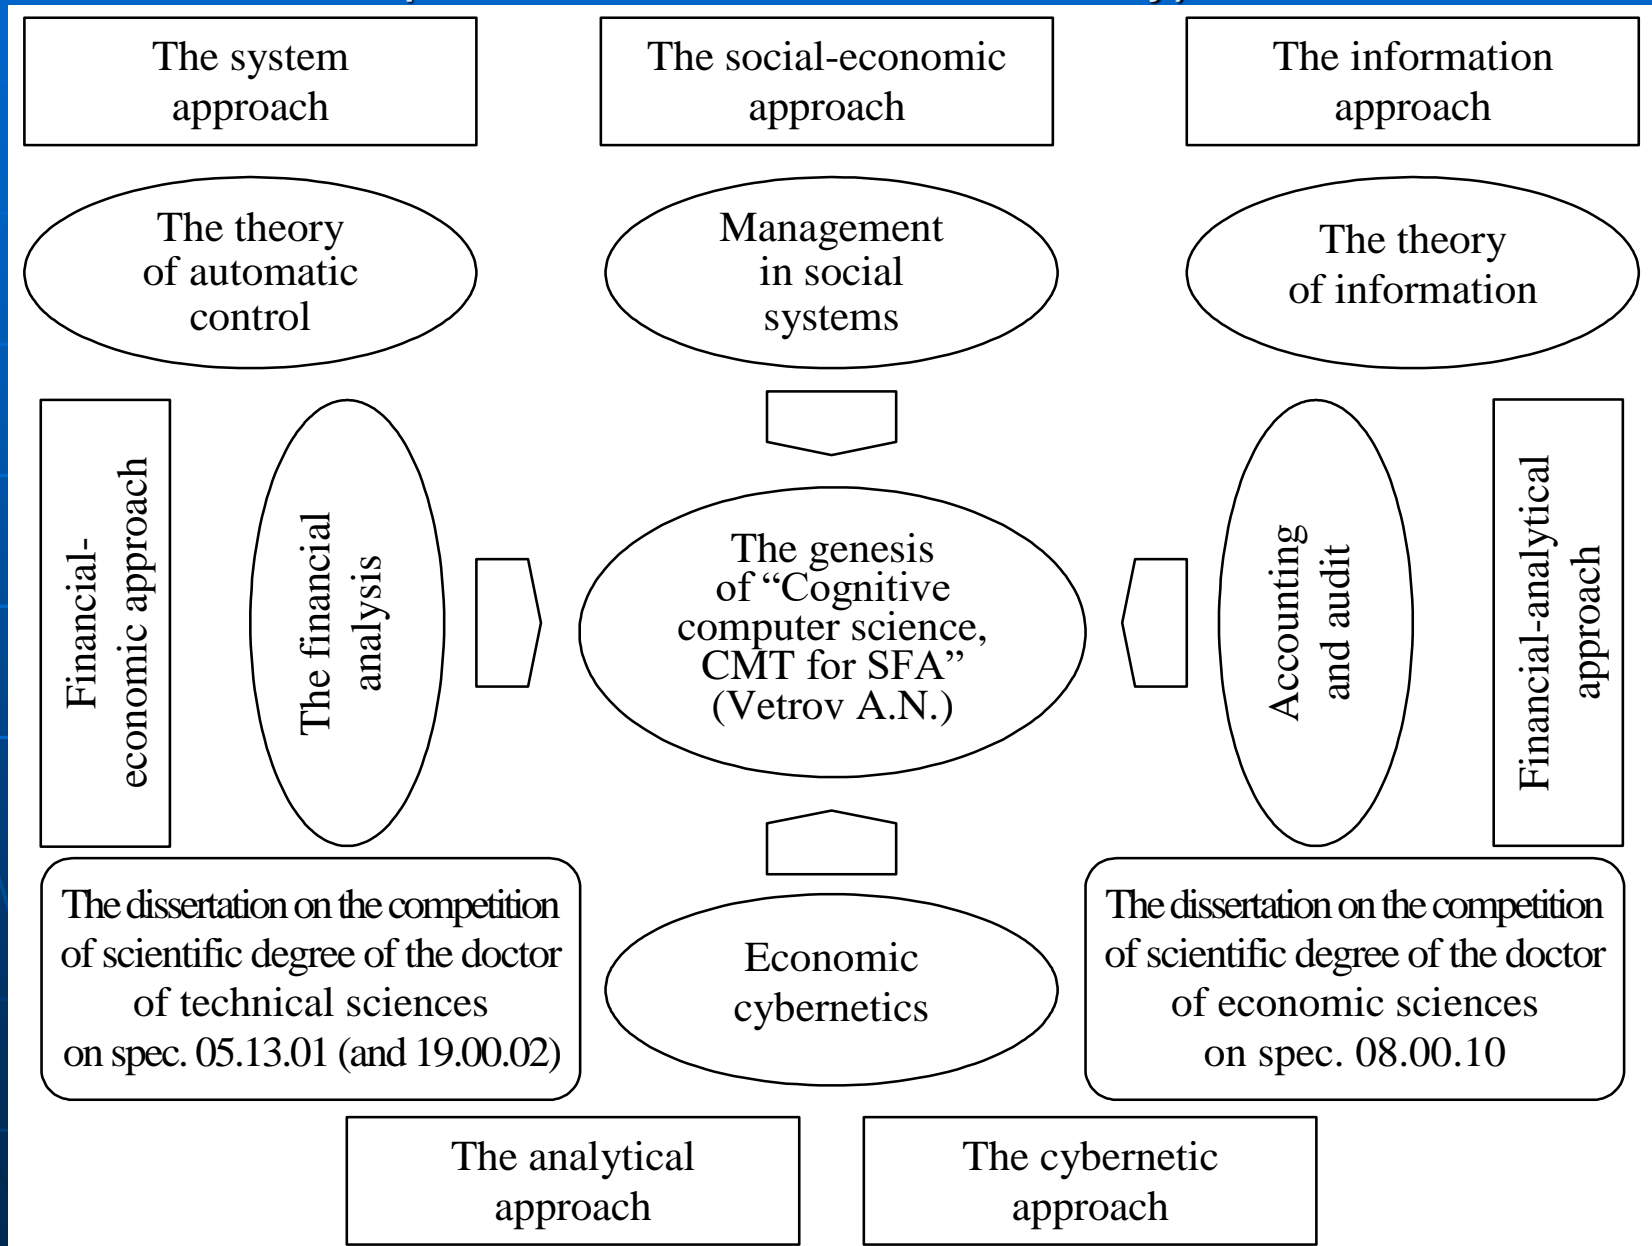

Adequacy

IEE must provide the compliance of the model of the subject to its original, it is extremely important the division of steady and situational individual features of the subjects and the means

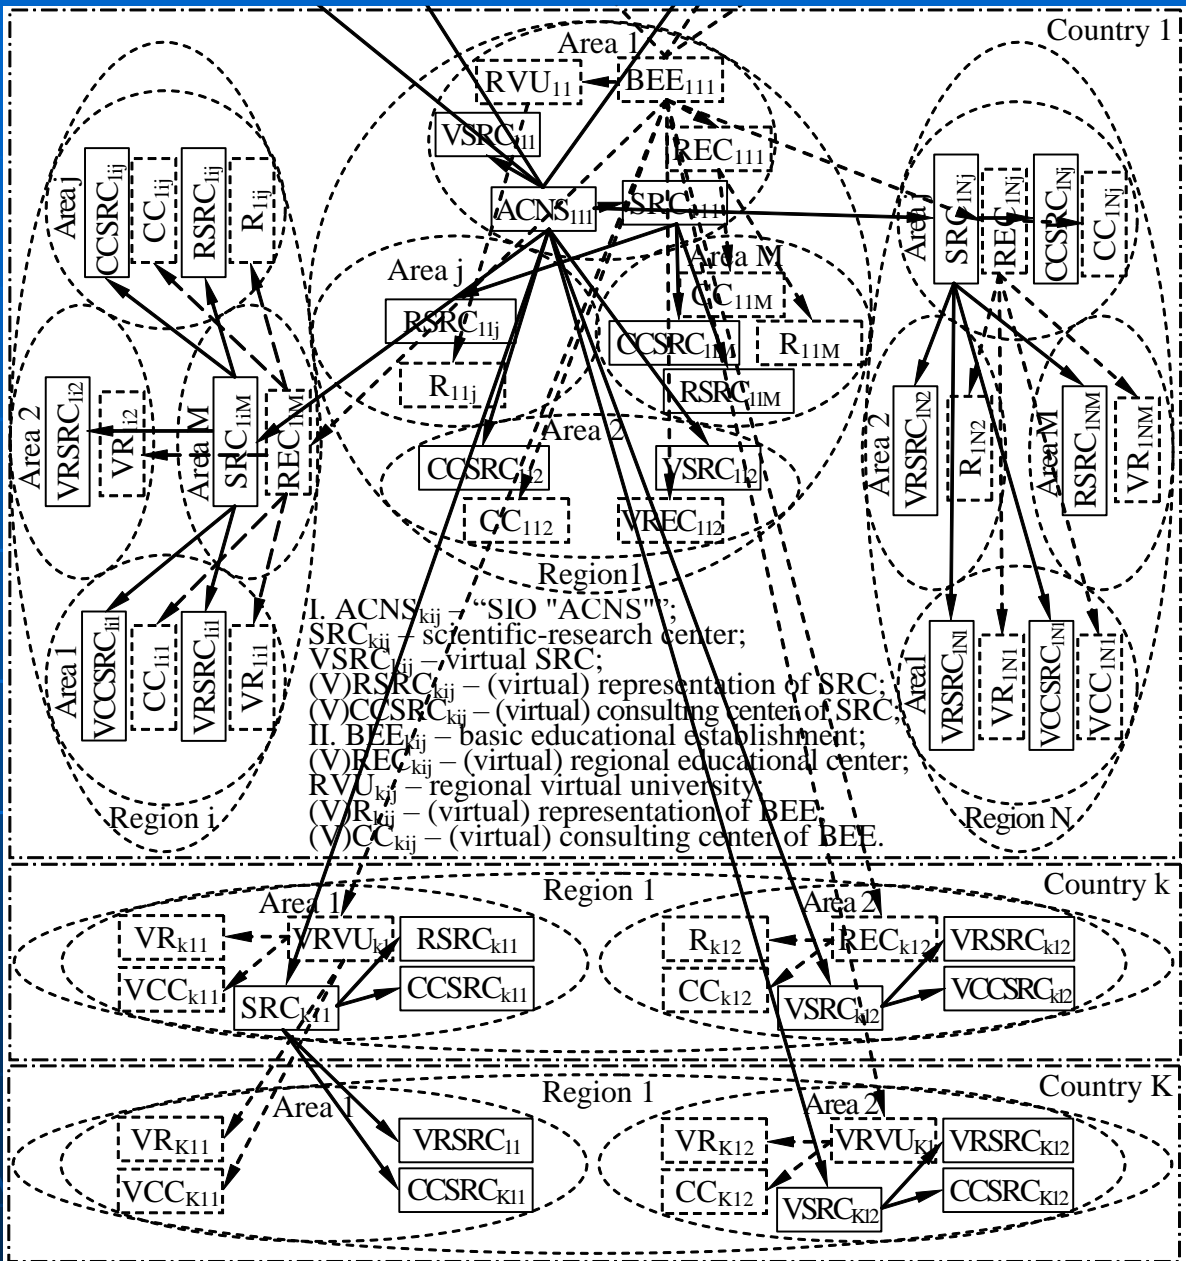

Solvency

IEE must support the quasidynamic updating of the model of the subject of training due to the systematic updating and accumulation of data about his condition

The genesis of “Cognitive computer science, the cognitive modeling technology for the system and financial analysis” as new (academic) scientific direction (according to the decision of “The Presidium of “The Russian academy of natural science””, the protocol №699 from the 08<sup>th</sup> of June 2018 y.)

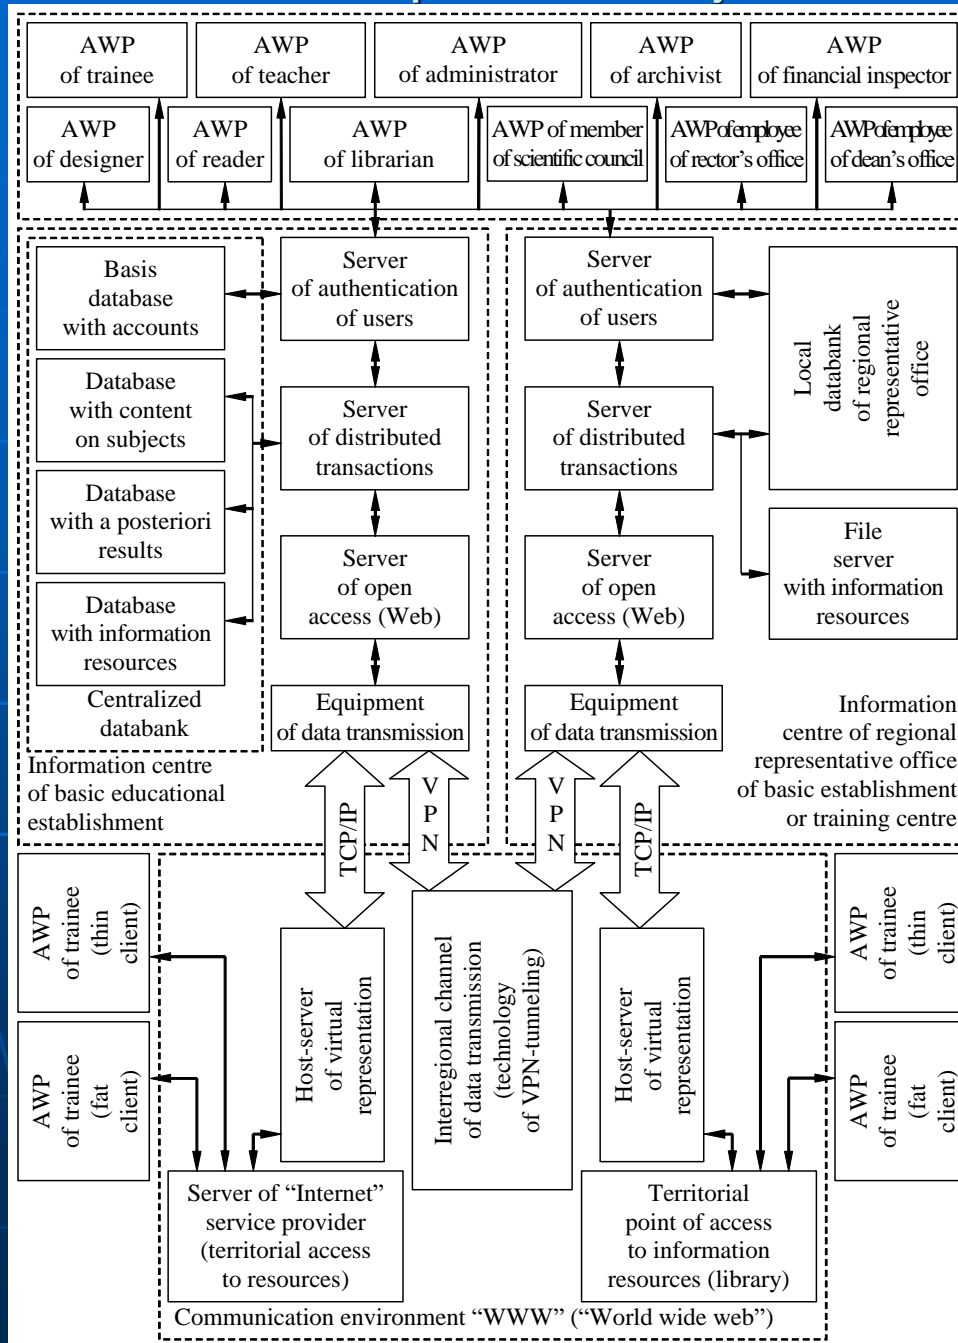

# The structure of the territorially distributed information-educational environment: as the example of the geographically distributed (countries), regions and areas

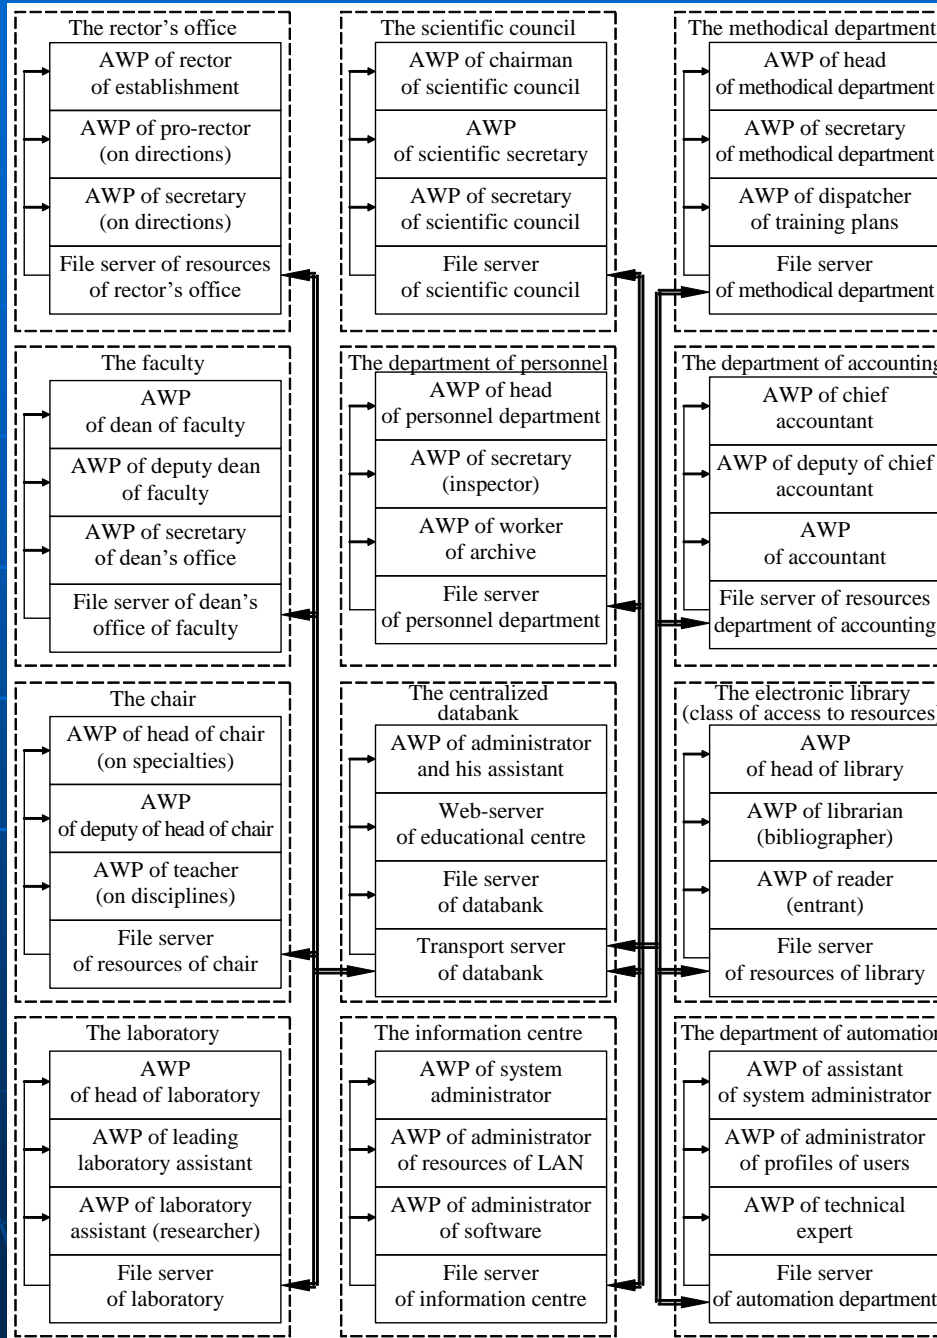

k – index of country; i – index of region; j – index of area;  
K – quantity of counties; I – quantity of regions; J – quantity of areas.

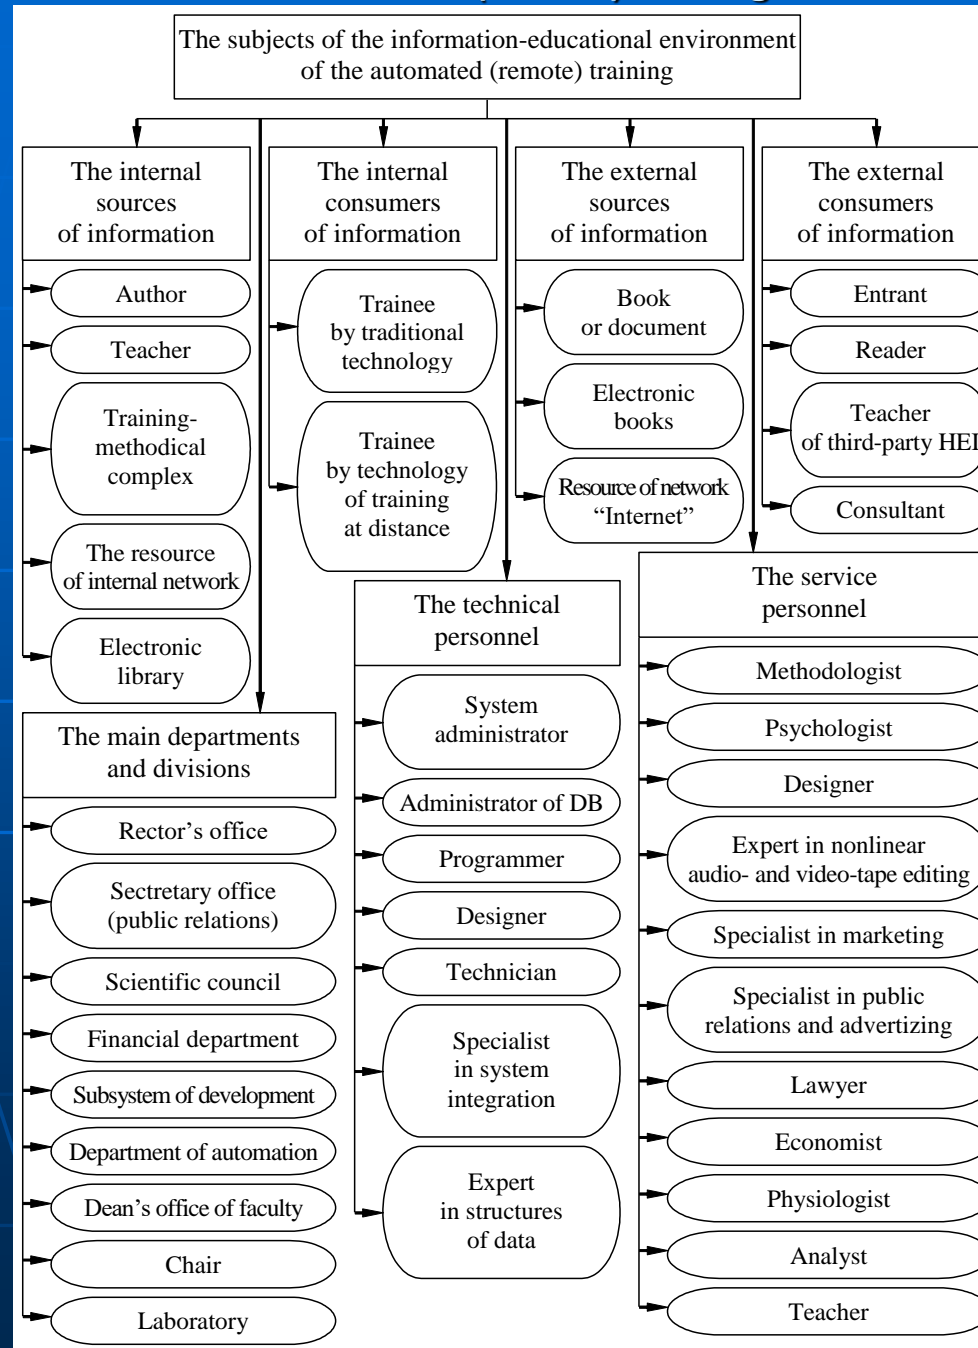

# The standard scheme of interaction of the information centre of educational establishment and the automated workplaces of the subjects of training

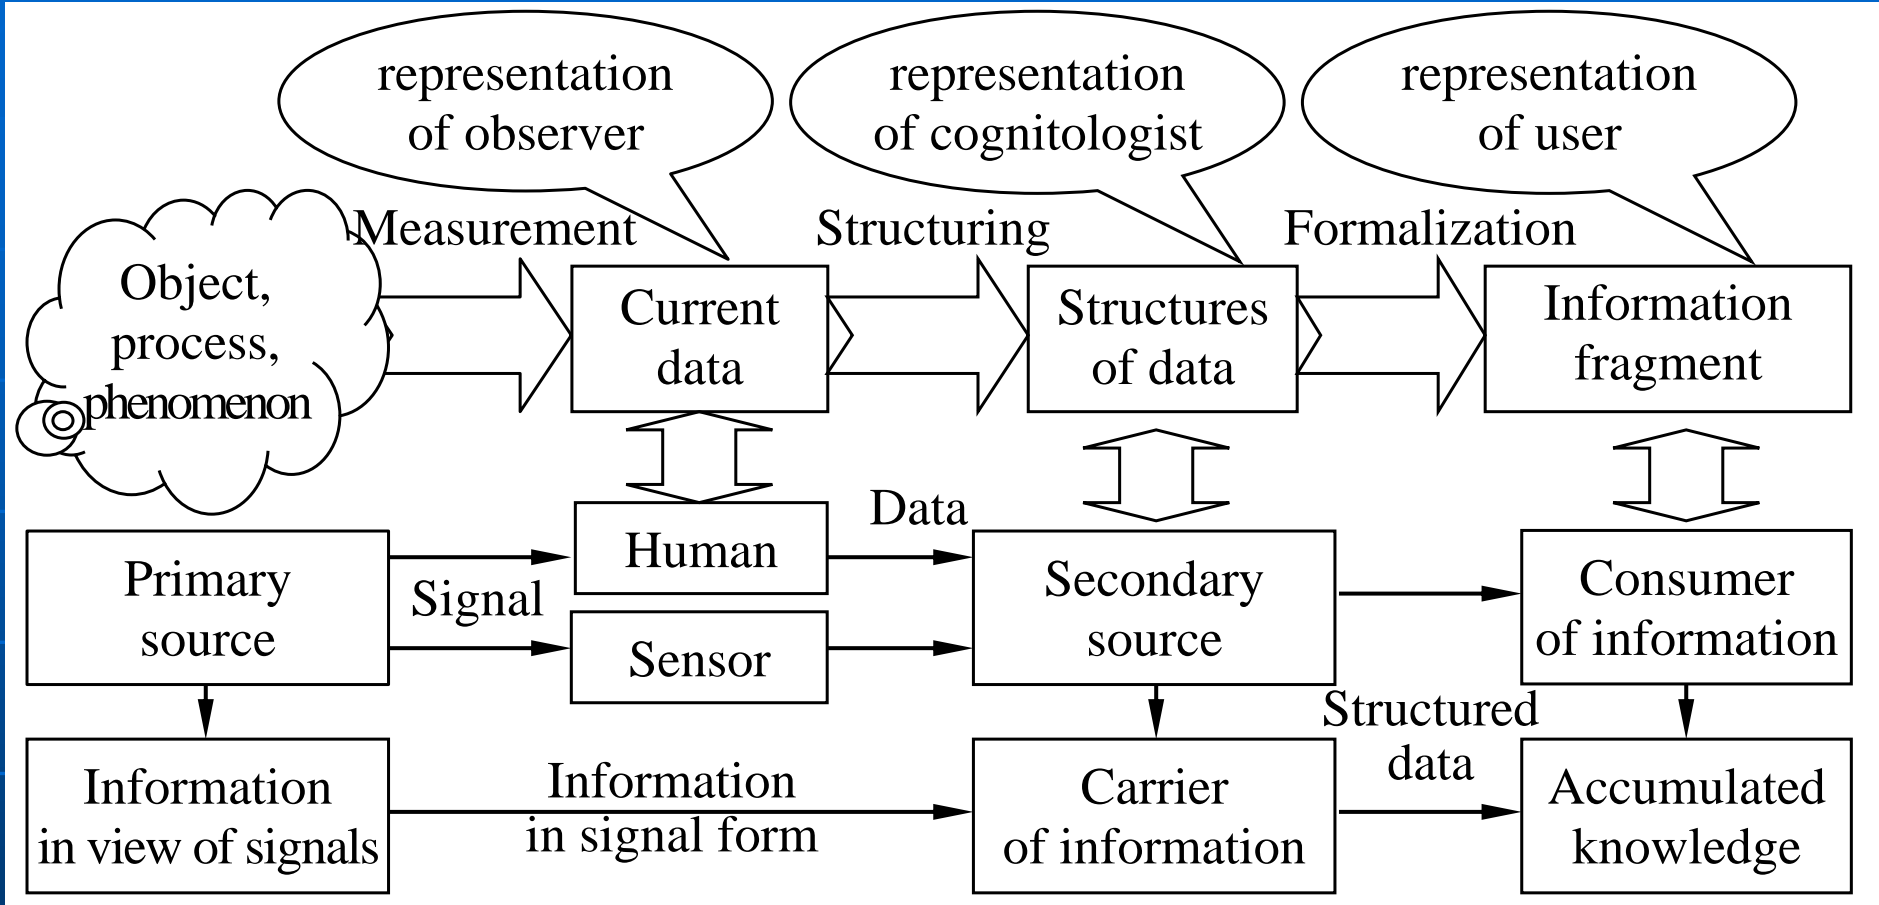

# The standard scheme of interaction of the automated workplaces of the subjects of the information environment of educational establishment

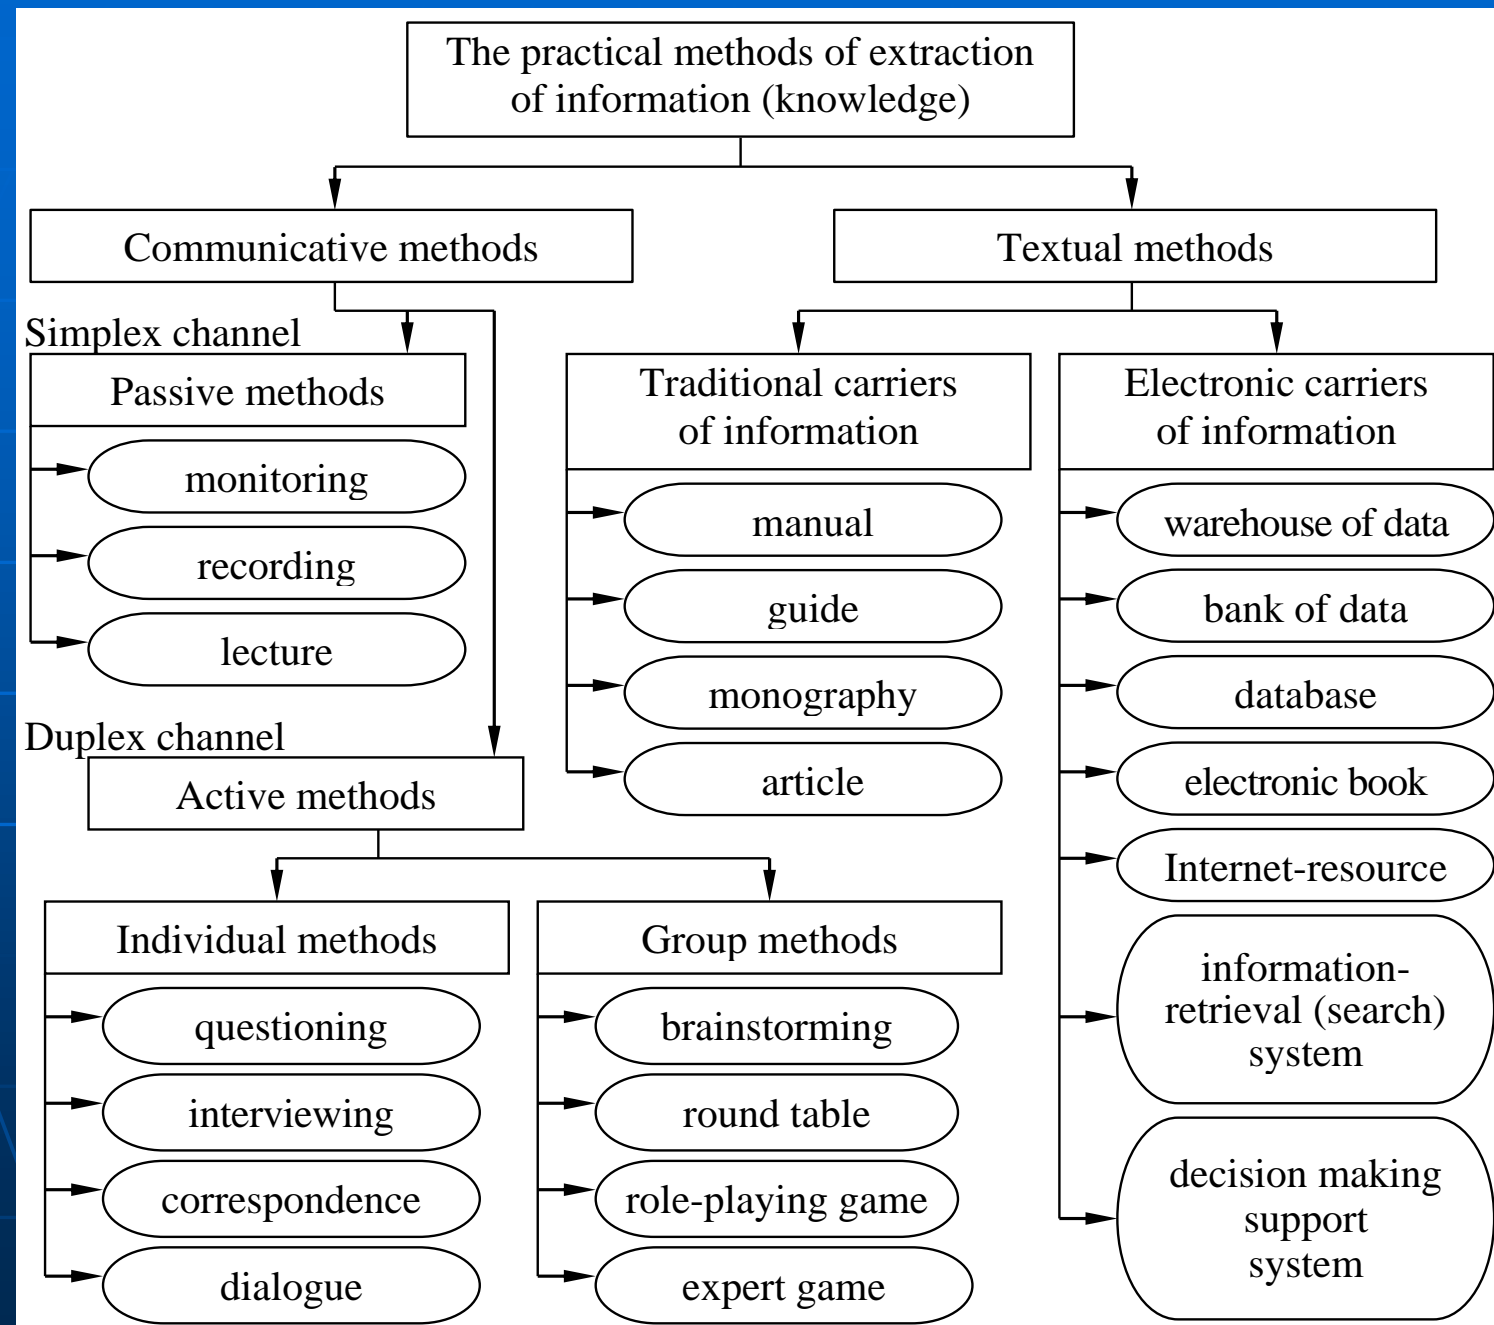

# The classification of the subjects of the information-educational environment of the automated (remote) training

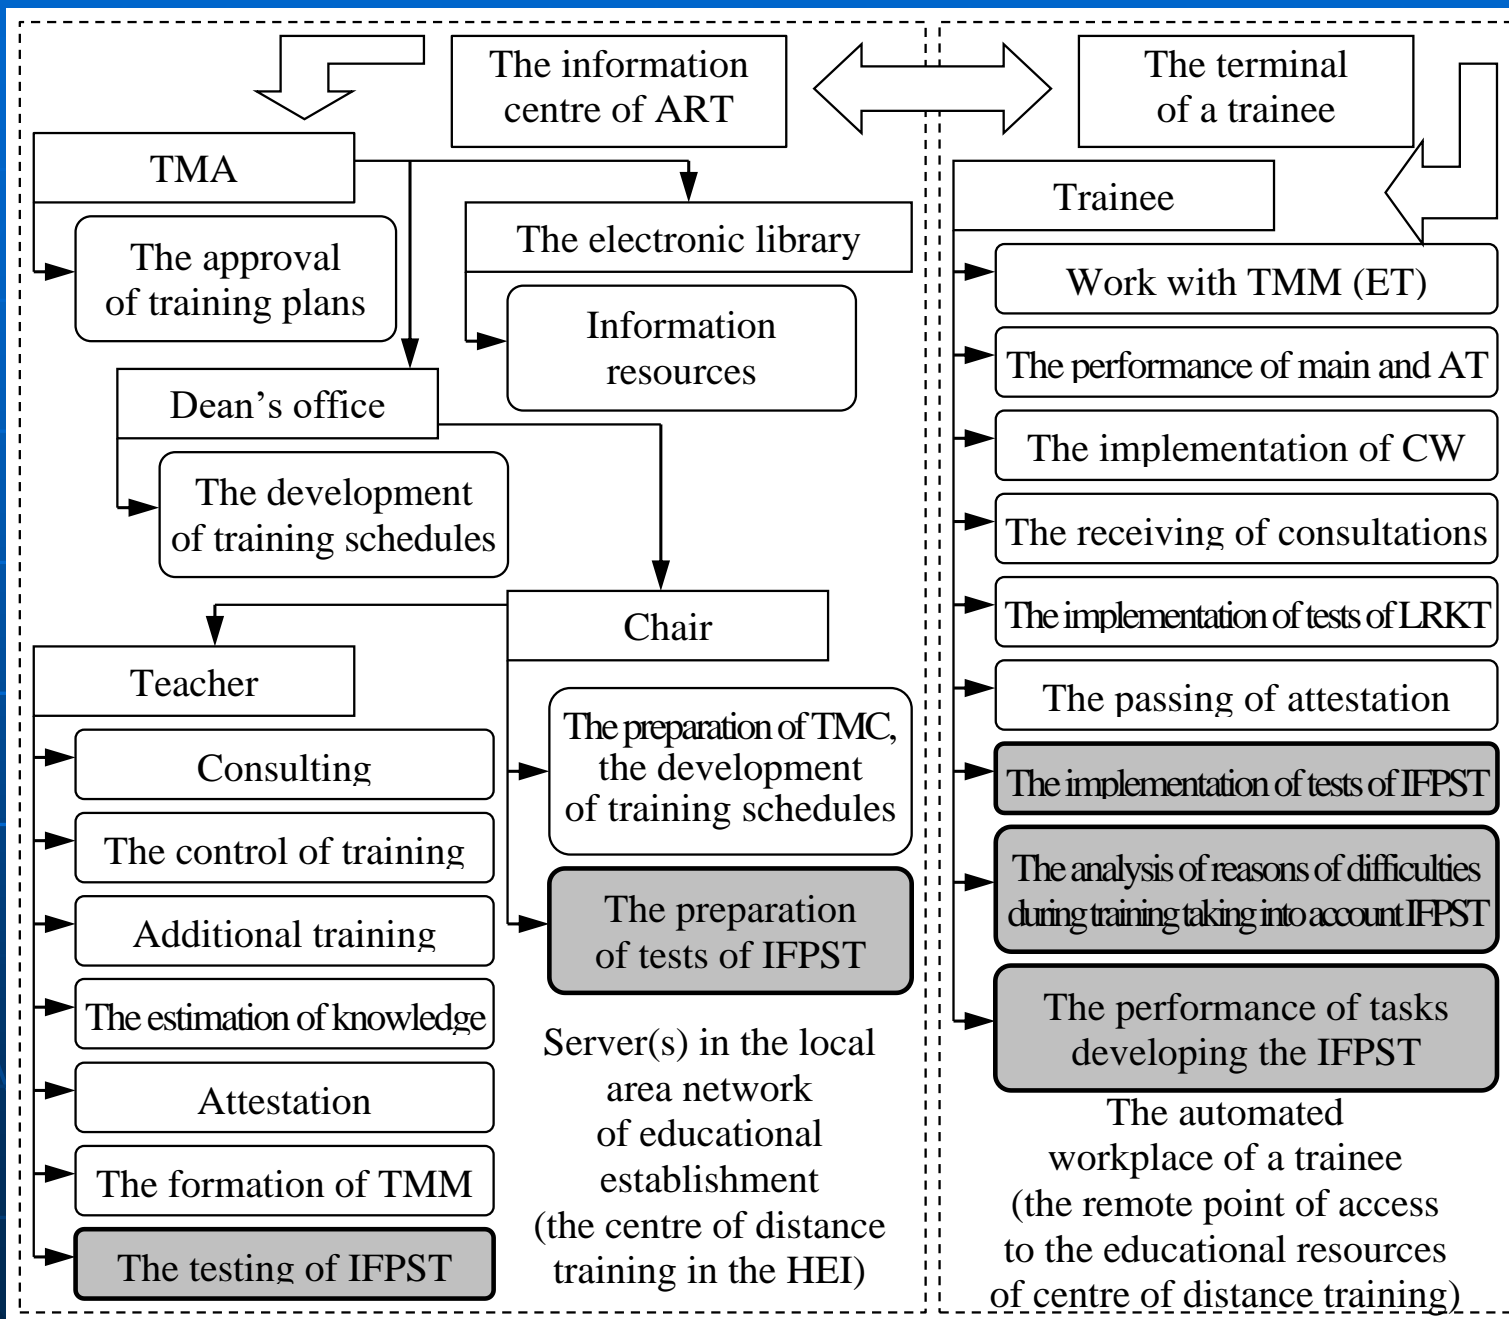

# The classification of the practical methods of extraction and transmission of information (as the aggregate of knowledge) on the subjects of studying

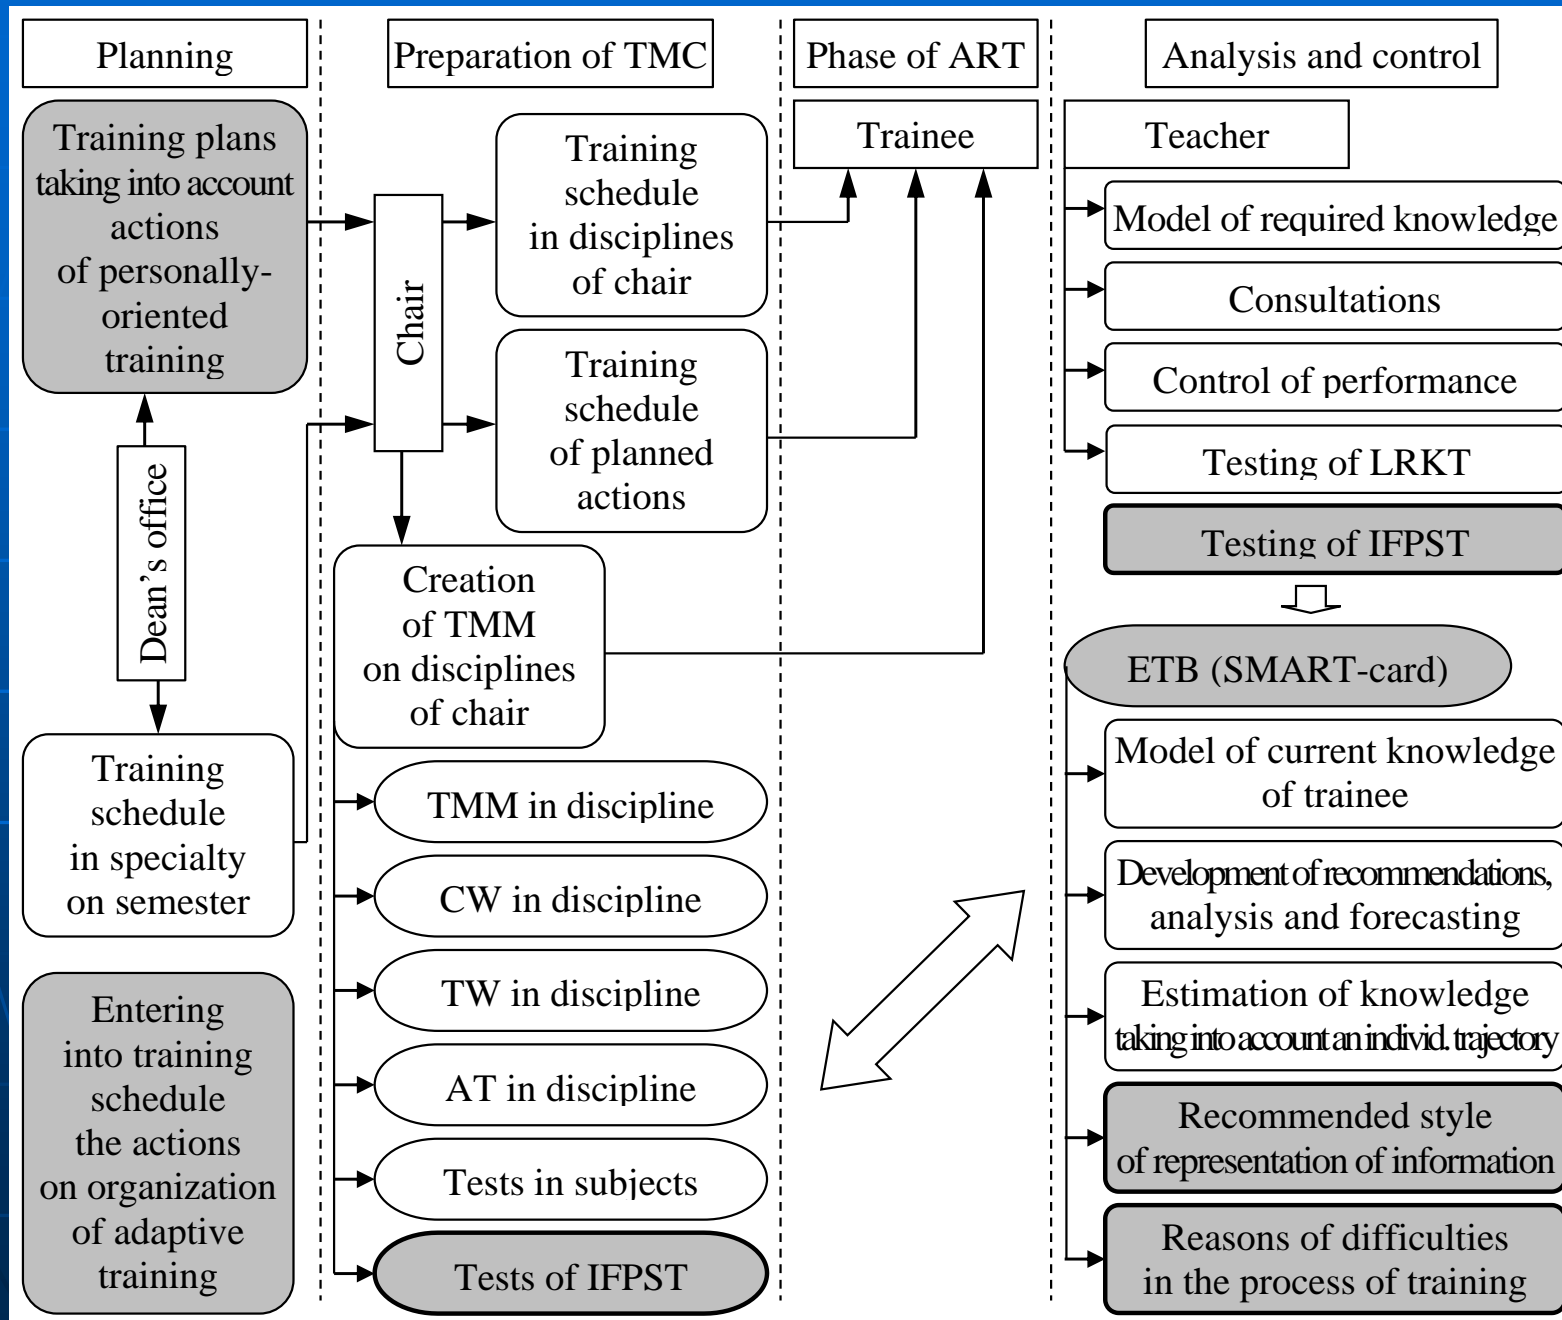

1.2.5

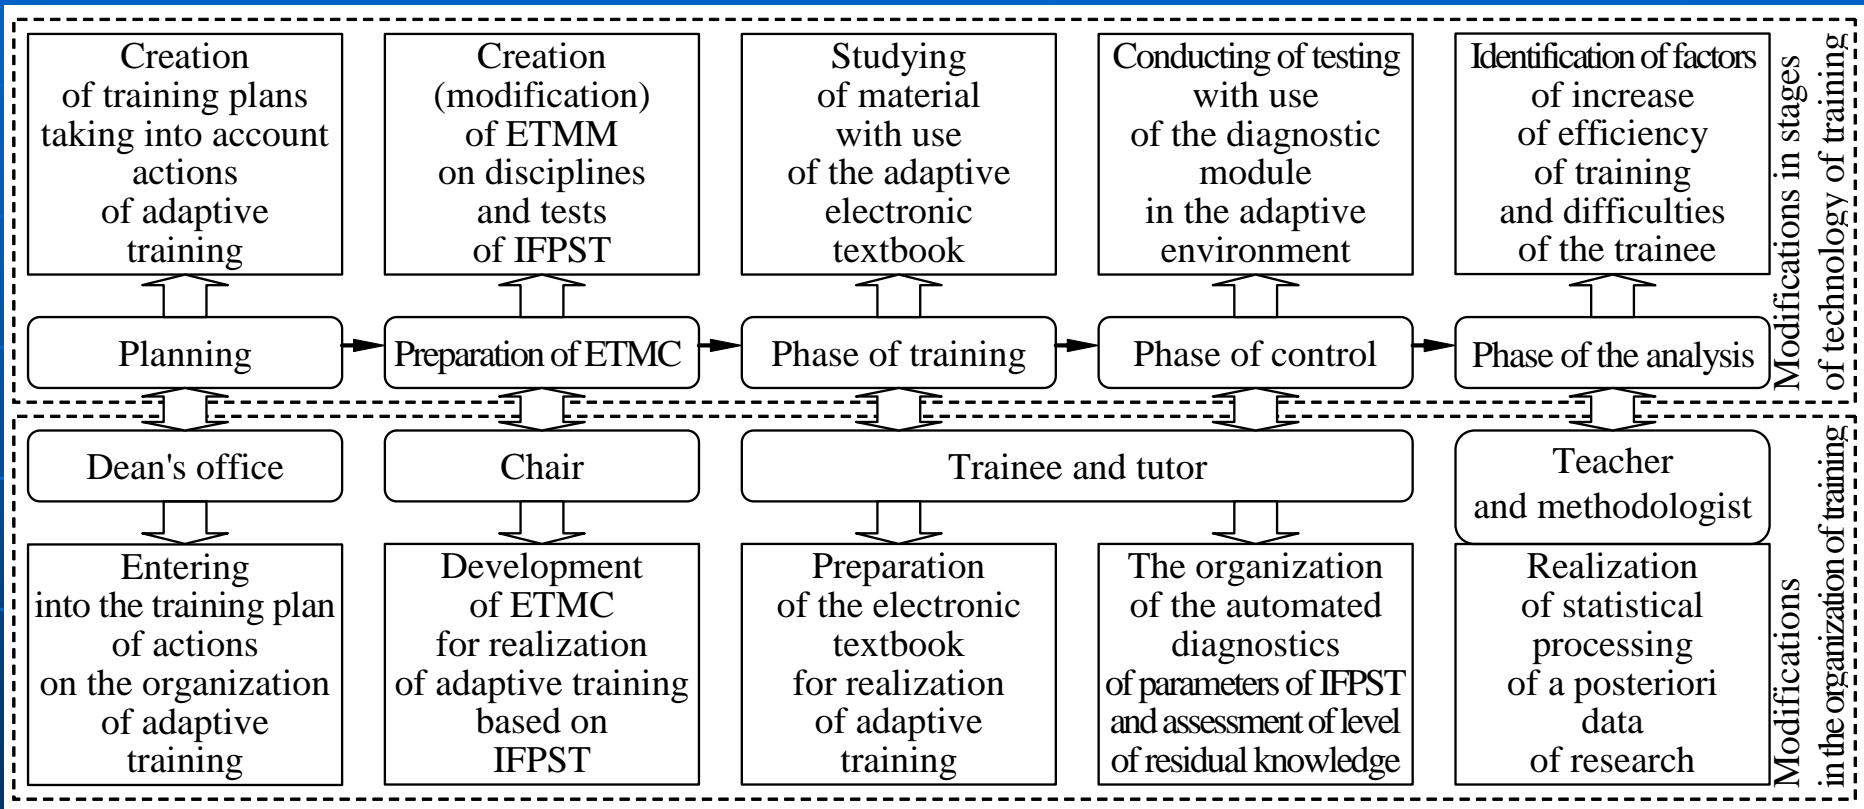

The modifications in the organization of the information environment of educational establishment for the support of accounting of the individual features of personality of the subjects of training

# The modifications in the technological process of formation of knowledge at the realization of the automated personally-oriented training

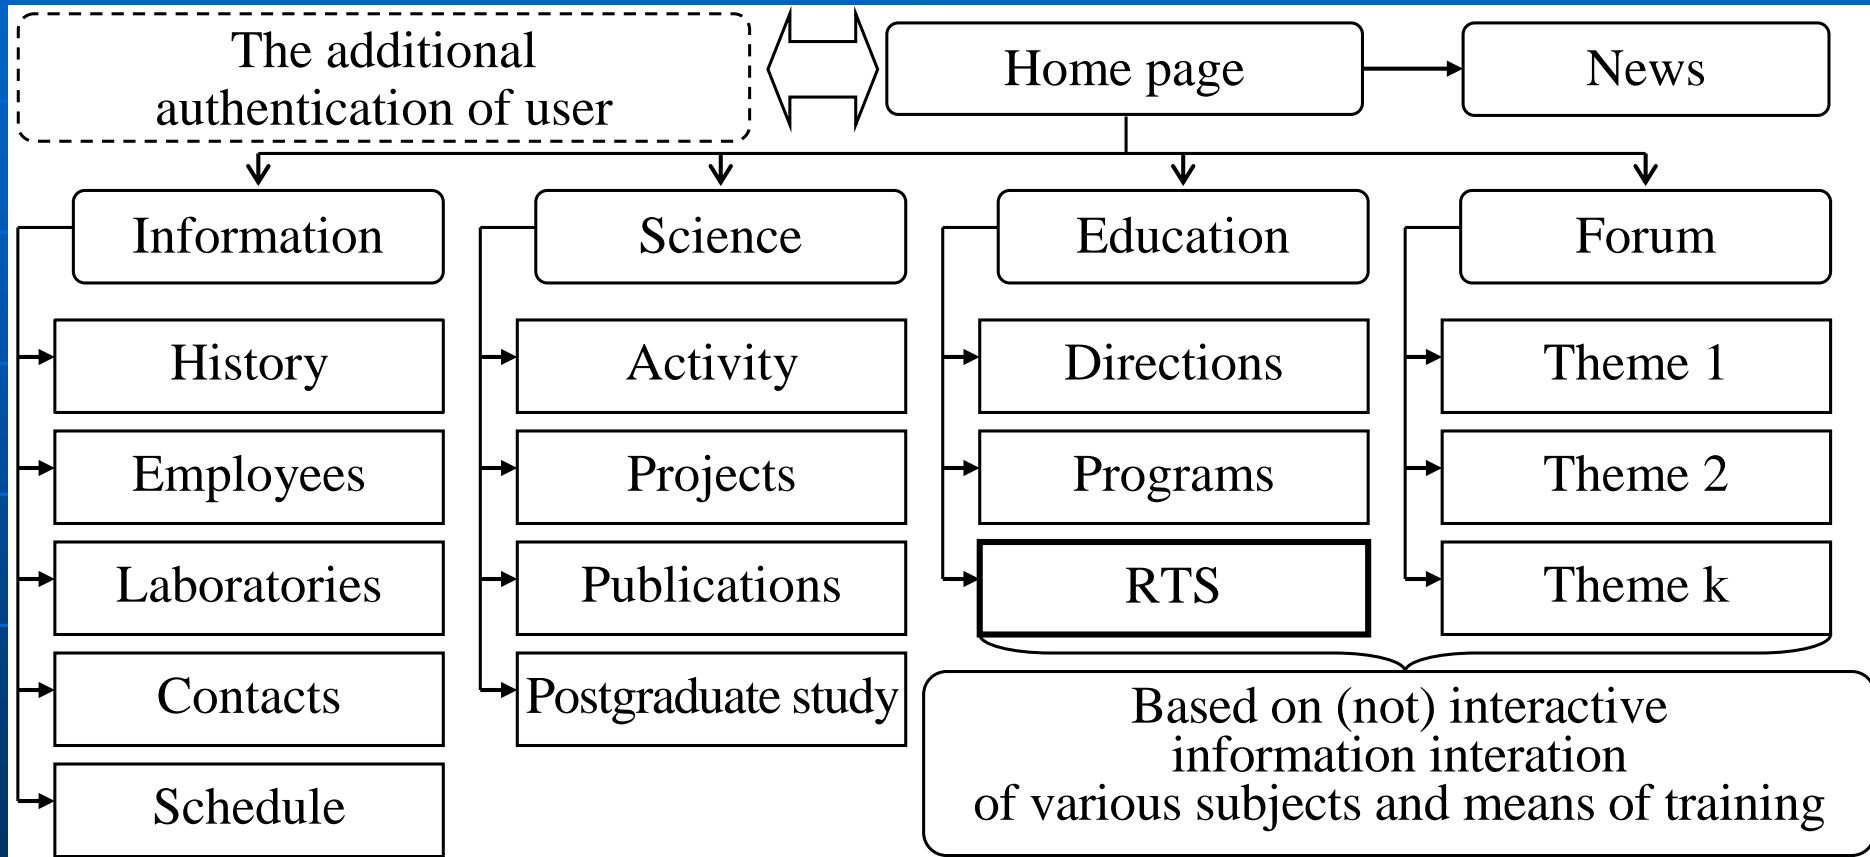

# The comparison of modifications in the organization and technology of automated training for the realization of the contour of adaptation based on the parametrical cognitive models

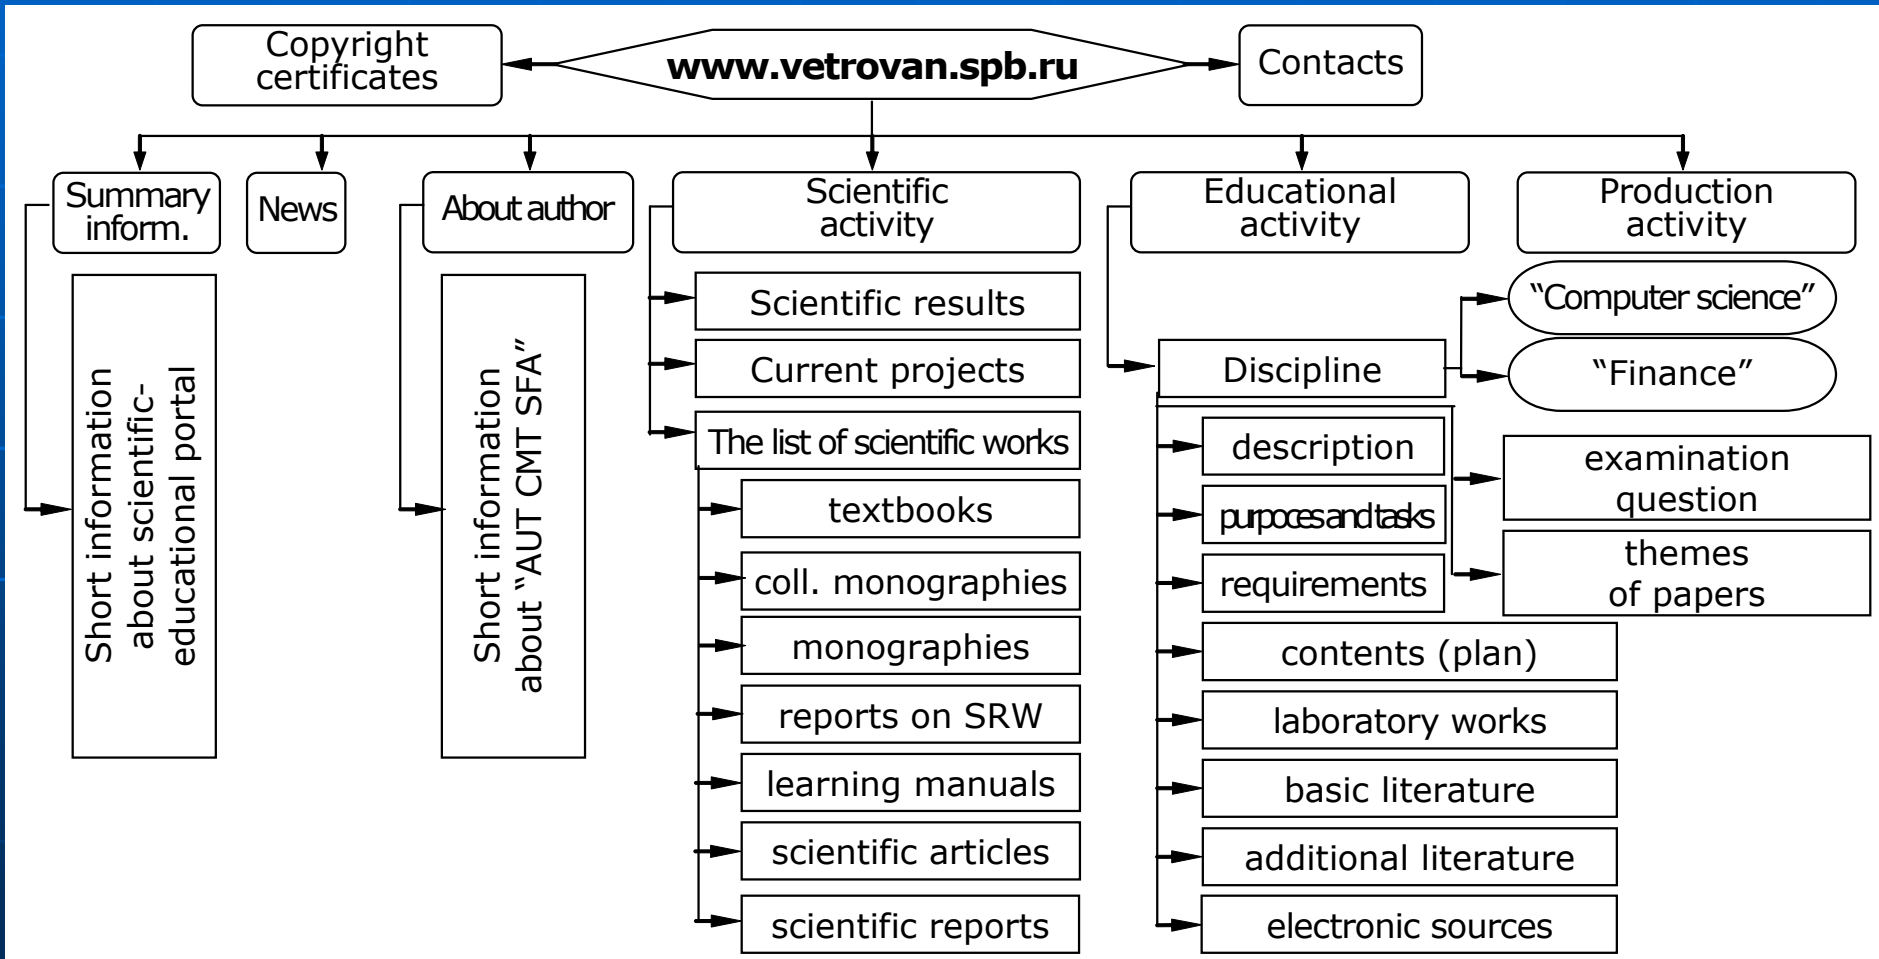

# The structure of the information-educational portal of educational (scientific) centre

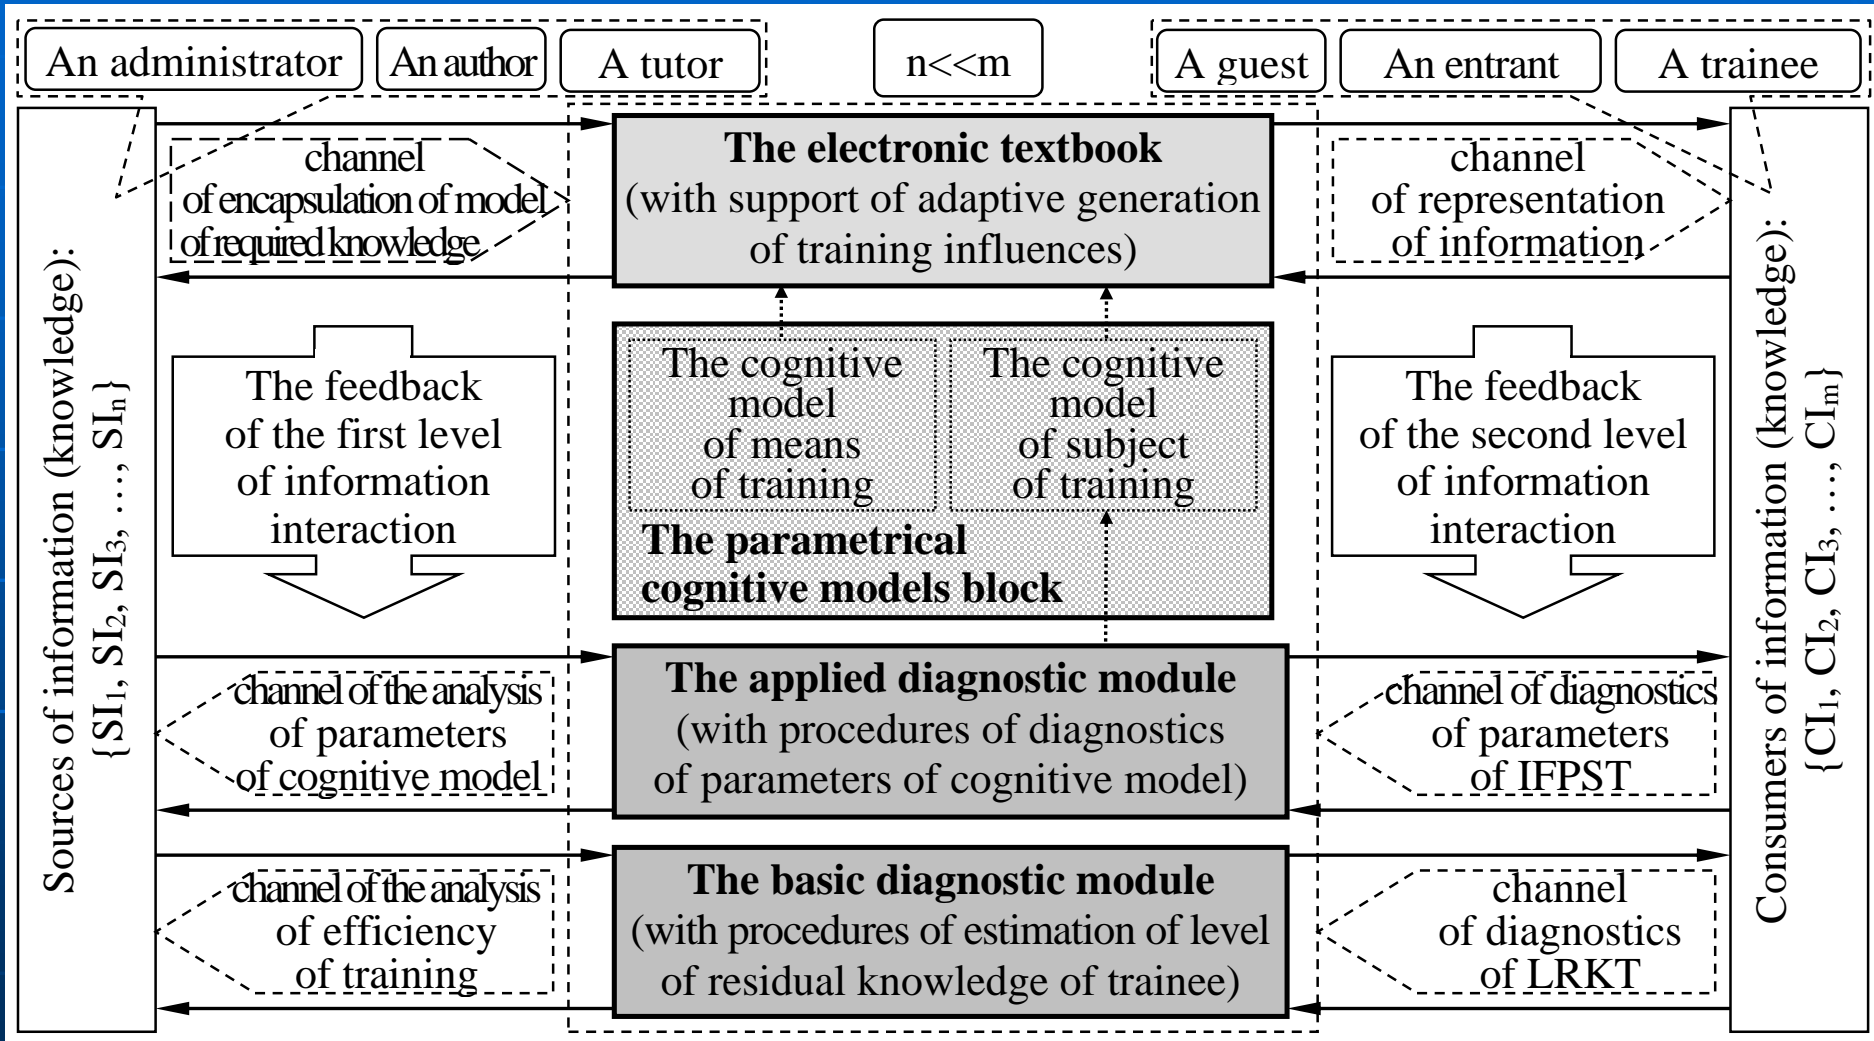

1.4.1

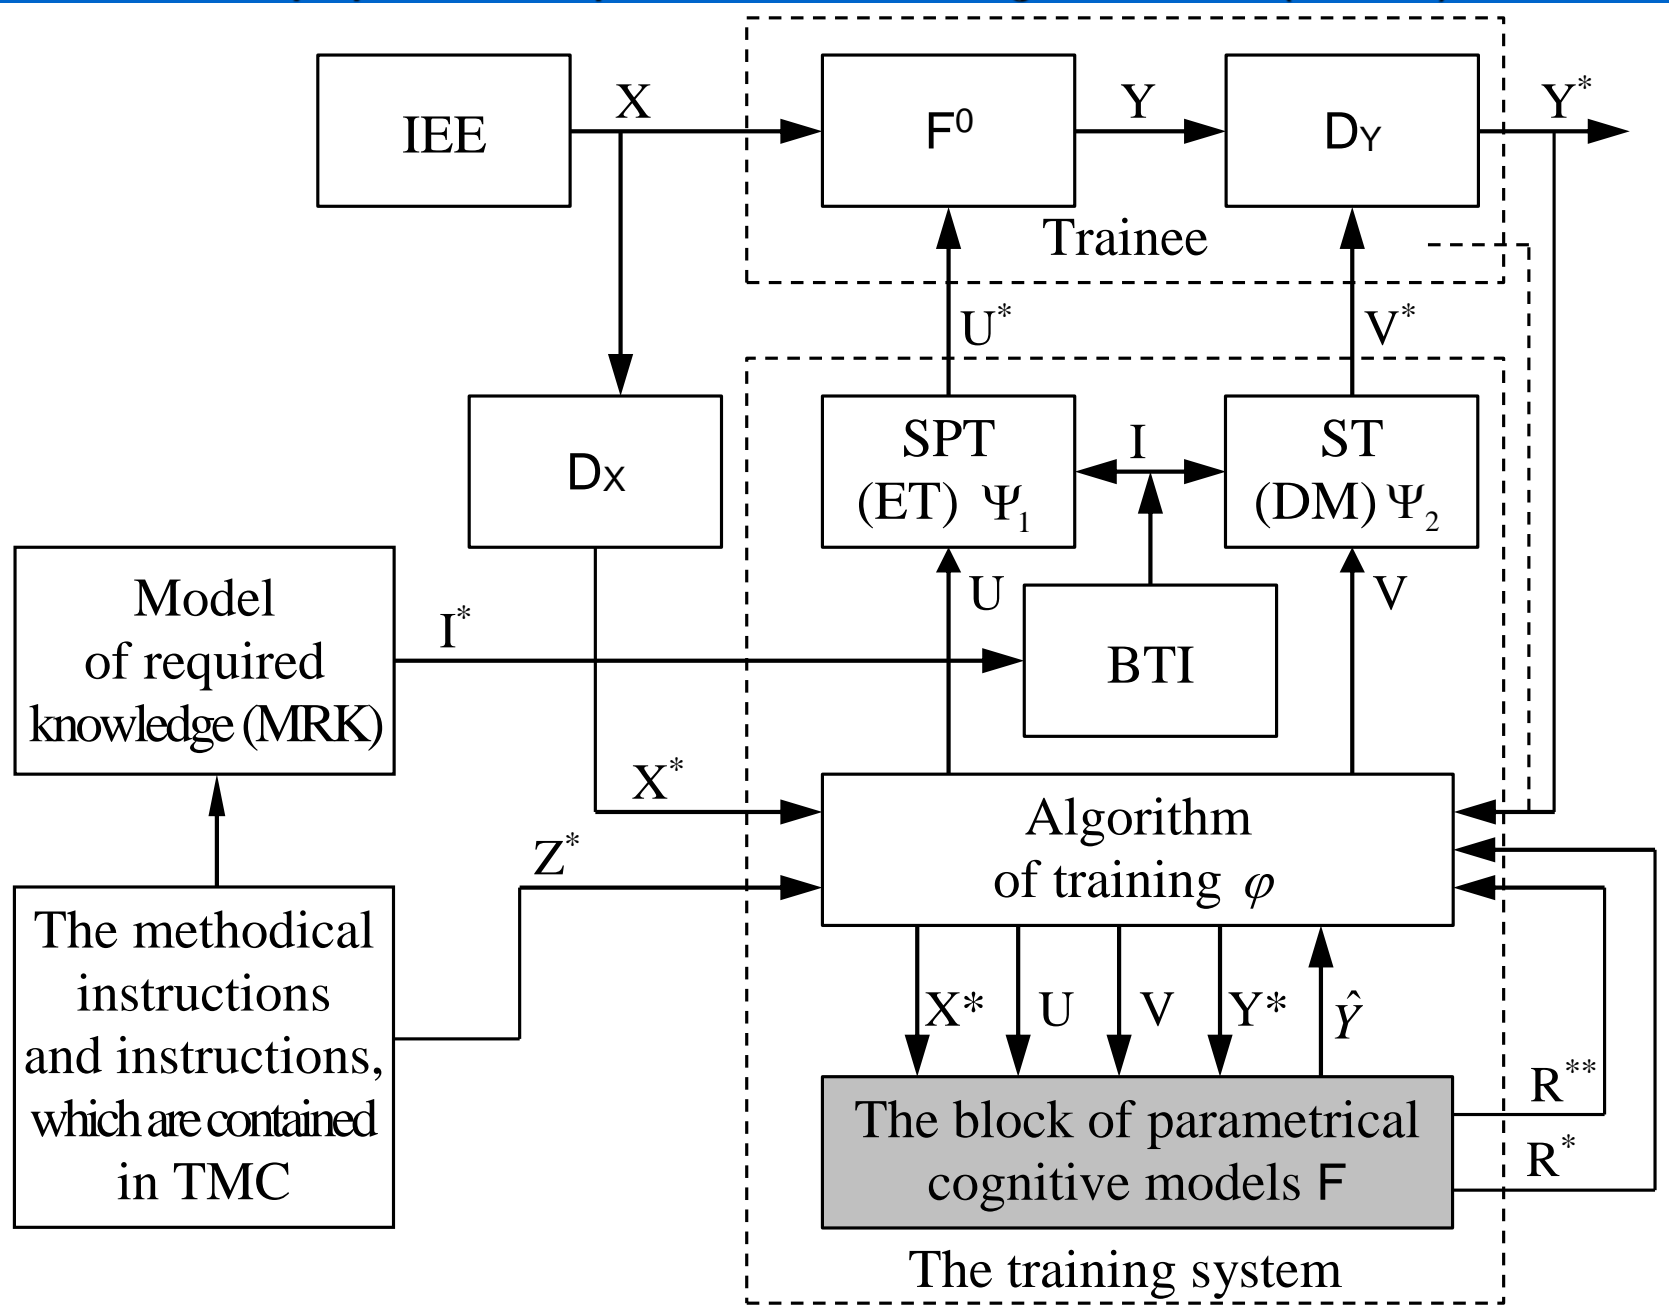

The structure of the information-educational portal of teacher (scientist):  
 on the example of the scientific-educational portal  
 of “AUT CMT SFA” Vetrov A.N.  
 (in the international foreign English language  
 and the national Russian language)

# The structure of the automated training system with the properties of adaptation based on the parametrical cognitive models block

The formal description of the structure of the automated training system with the properties of adaptation based on the cognitive models (1 from 3)

1. The condition of trainee and its estimation:
 
$$\begin{cases} Y = F^0(X, U^*) \\ \hat{Y}_n = F(X_n^*, U_{n-1}, V_n, Y_n^*) \end{cases}$$
2. The algorithm of training  $\varphi$  forms addresses and parameters of TI and control questions:
 
$$\begin{cases} U_{in} = \varphi(X_n^*, \hat{Y}_{n-1}, Z_n^*, C_{n-1}); n \in [1, k] - \text{number of step, } i \in [1, N] - \text{number of information fragment;} \\ V_{in} = \varphi(X_n^*, \hat{Y}_{n-1}, Z_n^*, R_{n-1}) \end{cases}$$

$C = [C^*, C^{**}]$ ,  $C^*$ - potential possibilities of means of training  
(the CM of means of training),  $C^{**}$ - IFPST (the CM of subject of training)
3. The databank of training information:
 
$$I^* \rightarrow I = \langle I_{1n}, I_{2n}, \dots, I_{in}, I_{Nn} \rangle \quad I_{in} = \{I_{in}^U, I_{in}^V\}$$

$$\begin{cases} I_{in}^U = \{I_{1n}^U, \dots, I_{Nn}^U\} \\ I_{in}^V = \{I_{1n}^V, \dots, I_{Nn}^V\} \end{cases}$$
4. The shaper of a portion of training (SPT) and the shaper of tests (ST):
 
$$\begin{cases} U_{in}^* = \Psi_1(U_{in}, I_{in}^U) & U_{in}^*(t_{n-1}) \Rightarrow Y_i^*(t_n) \\ V_{in}^* = \Psi_2(V_{in}, I_{in}^V) & (i \in [1, N], n \in [1, k]) \end{cases}$$

provides the adaptive generation of TI  $U^*$   
and control questions  $V^*$  with the use of addresses in DB  
and parameters of display  $U_i$  and  $V_i$  on the basis I
5. The resultativity of performance of test tasks:
 
$$Y^* = D_Y(Y, V^*)$$

calculation with the operator  $D_Y$  (sensor) on the basis  
of the condition of trainee  $Y$  and a set of questions  $V^*$
6. The task and the purpose of training is represented in the view:
 
$$Z^* = \begin{cases} Q(Y^*) \rightarrow \delta, & \delta - \text{the required LRKT} \\ T(Y^*) \rightarrow \min, \end{cases} \quad \begin{aligned} Y_0 &\rightarrow Y^{**} - CAP(\text{cond.}_{abs.}_{proficiency}) \\ Q_n &\approx \delta (\delta \approx Q^*) \end{aligned}$$
7. The condition of the trainee on the n-th step:
 
$$Y_n \Leftrightarrow P_n \quad P_n = \{p_1^n, p_2^n, \dots, p_i^n, p_N^n\} \quad p_i^n|_{t_n} \in [0, 1]$$

probability of ignorance of the i-th element  
TI at the n-th moment of time  $t_n$   $p^{**} = 0$

8. The condition (the probability of ignorance of contents) of j-th trainee changes by means of a set of TI:

$$P_n^j = F_n^j(P_{n-1}^j, U_n^j, C_{n-1}^j) \quad P_{n-1}^j \Big|_{C_{n-1}} \xrightarrow{U_n} P_n^j$$

9. As the condition of the trainee directly is not observed  $Y_n \Leftrightarrow P_n$ , therefore testing is necessary. At the same time reaction (answer) of the trainee:

$$\begin{cases} R_n = F^0(P_n, U_n, V_n) \\ R_n = (r_{u_1}^n, r_{u_2}^n, \dots, r_{u_i}^n, \dots, r_{u_{M_n}}^n) \end{cases} \quad r_{u_i}^n = \begin{cases} 0 & U_n - \text{educational influence of the set level of difficulty} \\ 1 & \text{(on the basis of the level of required knowledge)} \end{cases}$$

10. The task and algorithm of adaptation of the parameters of cognitive models in the process of training:

$$C_n = \chi(C_{n-1}, R_n) \quad Y_n \Leftrightarrow P_n = \chi(P_{n-1}, U_n, R_n)$$

11. The algorithm of training allows to define the optimum portion of TI at each step:

$$Q(P_{n+1}) = Q(F(P_n, U_{n+1}, C_n)) \rightarrow \min_{U_i, R_j} \Rightarrow U_{n+1}^*$$

12. The probability of ignorance of the elements of TI:  $\alpha_i^{n+1} = \begin{cases} \alpha_i^n (i \notin U_n) \\ \gamma' \alpha_i^n (i \in U_n; r_i^n = 0) \\ \gamma'' \alpha_i^n (i \in U_n; r_i^n = 1; n = 1, 2, \dots) \end{cases}$

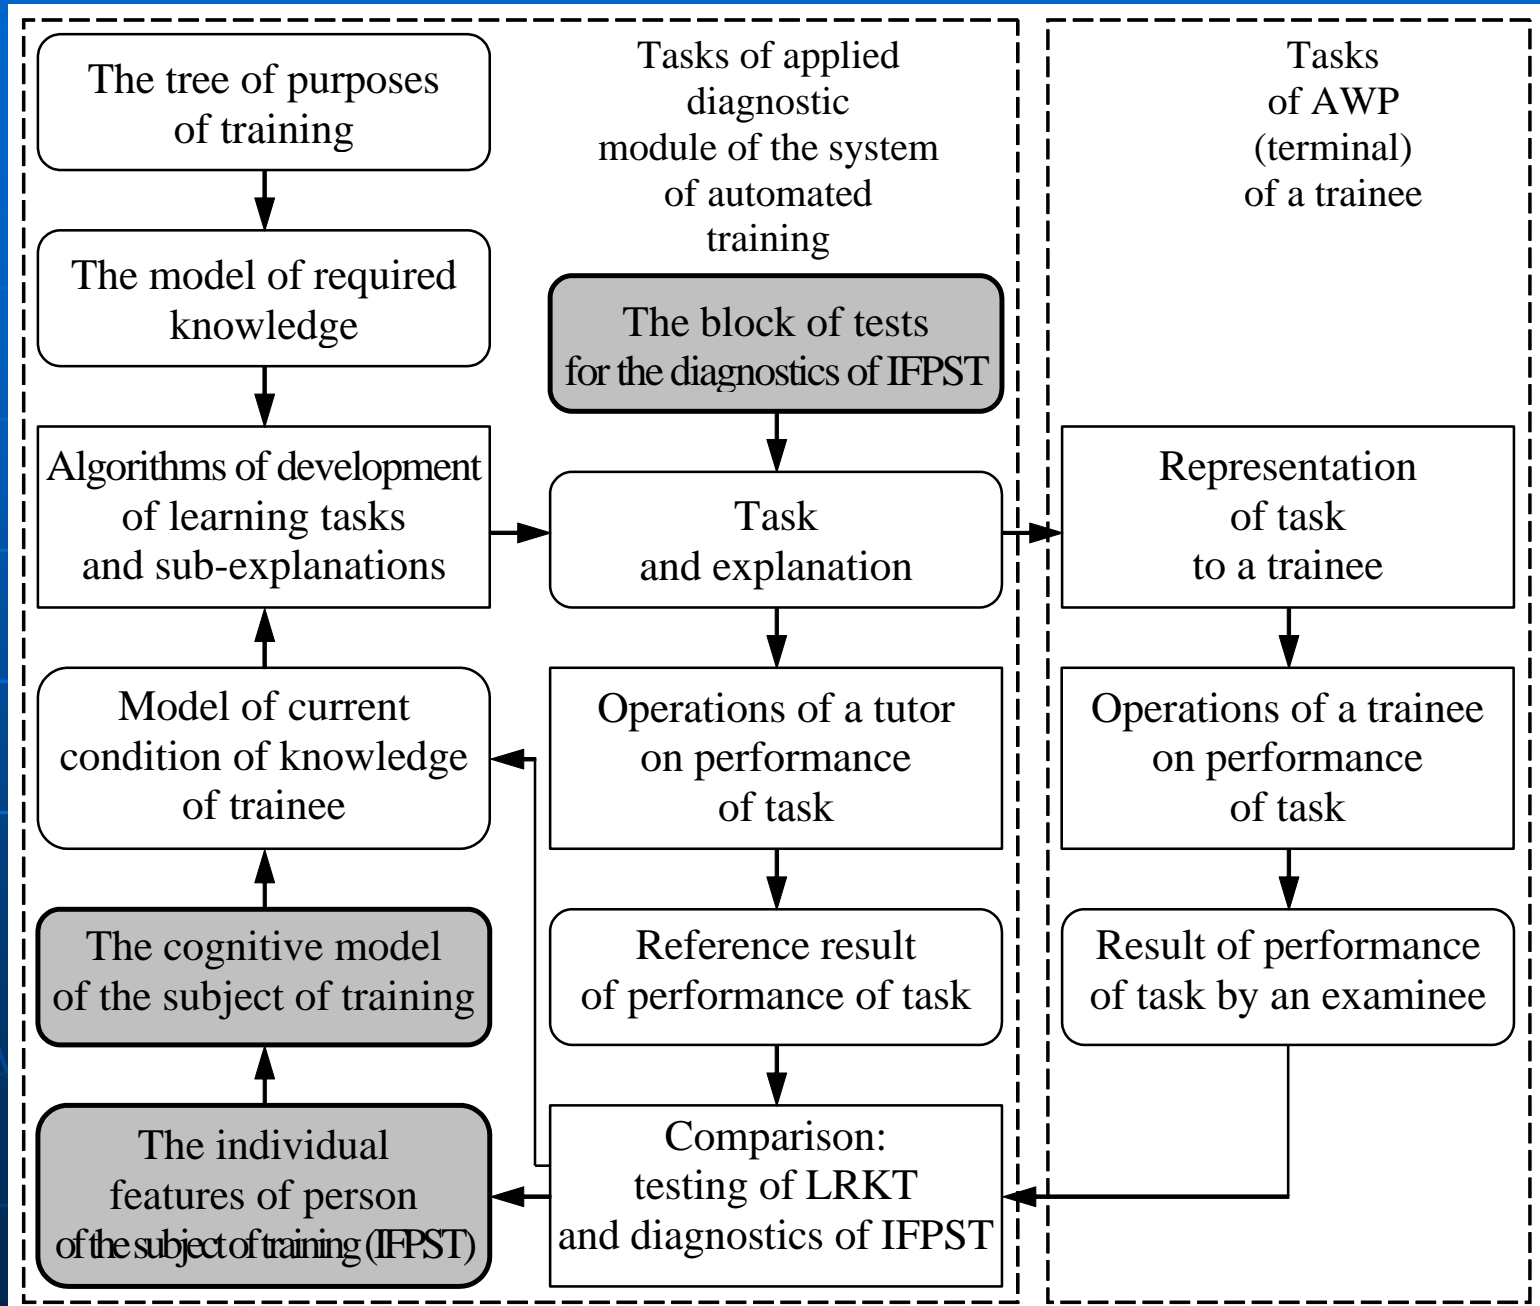

$$p_i^n = p_i(t_i^n) = 1 - e^{-\alpha_i^n t_i^n} \quad (i \in \{1, \dots, N\}, n \in \{1, \dots, \infty\})$$

13. The criterion of quality of training:

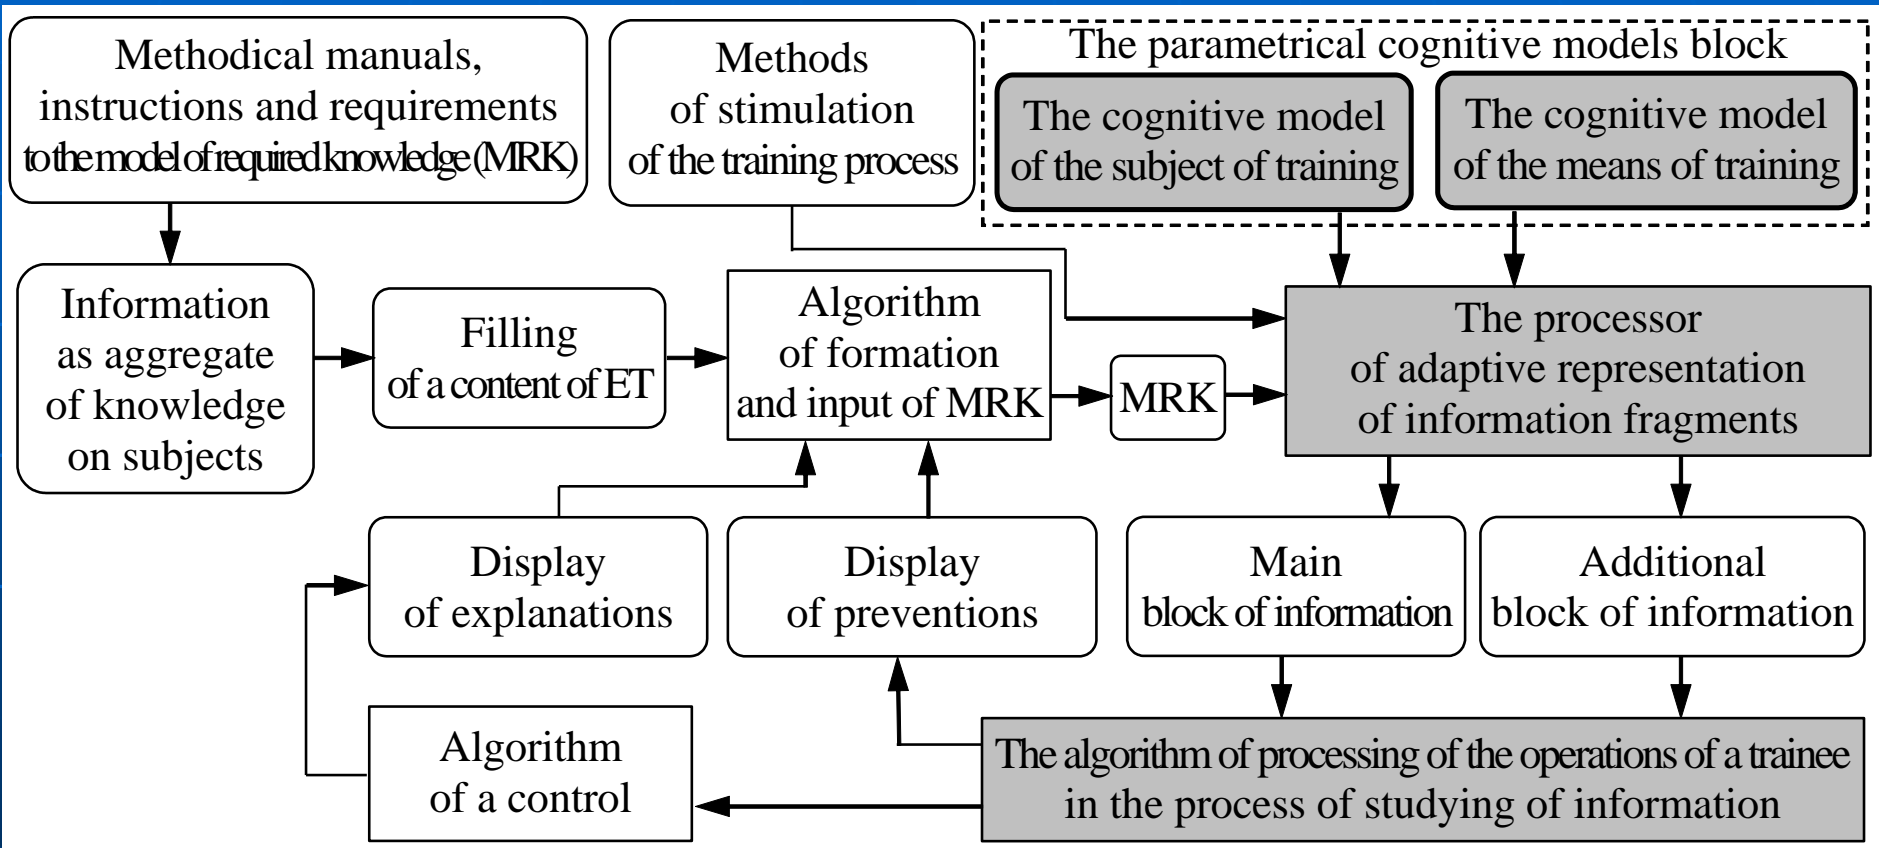

$$Q_n = \sum_{i=1}^N p_i(t_i^n) q_i \quad Q_n = \sum_{i=1}^N p_i(t_i^n) q_i \rightarrow \min_{U_n \in \Phi(L_n)} \Rightarrow U_n^* \quad \begin{cases} t_i^{n+1} = \begin{cases} \Delta t_i^n (i \in U_n) \\ t_i^{n+1} + \Delta t_i^n (i \notin U_n); n = 0, 1, \dots \end{cases} \\ u_1 = \max_{i \in [1, N]} p_i(t_i^n) q_i \\ u_i = \max_{i \in [1, N] (i \neq u_1)} p_i(t_i^n) q_i \\ u_{M_n} = \max_{i \in [1, N] (i = u_j, j = [1, M_n])} p_i(t_i^n) q_i \end{cases}$$

14. The algorithm of selection of information fragments

The scheme, reflecting the principle (algorithm) of functioning of the basic and applied diagnostic modules

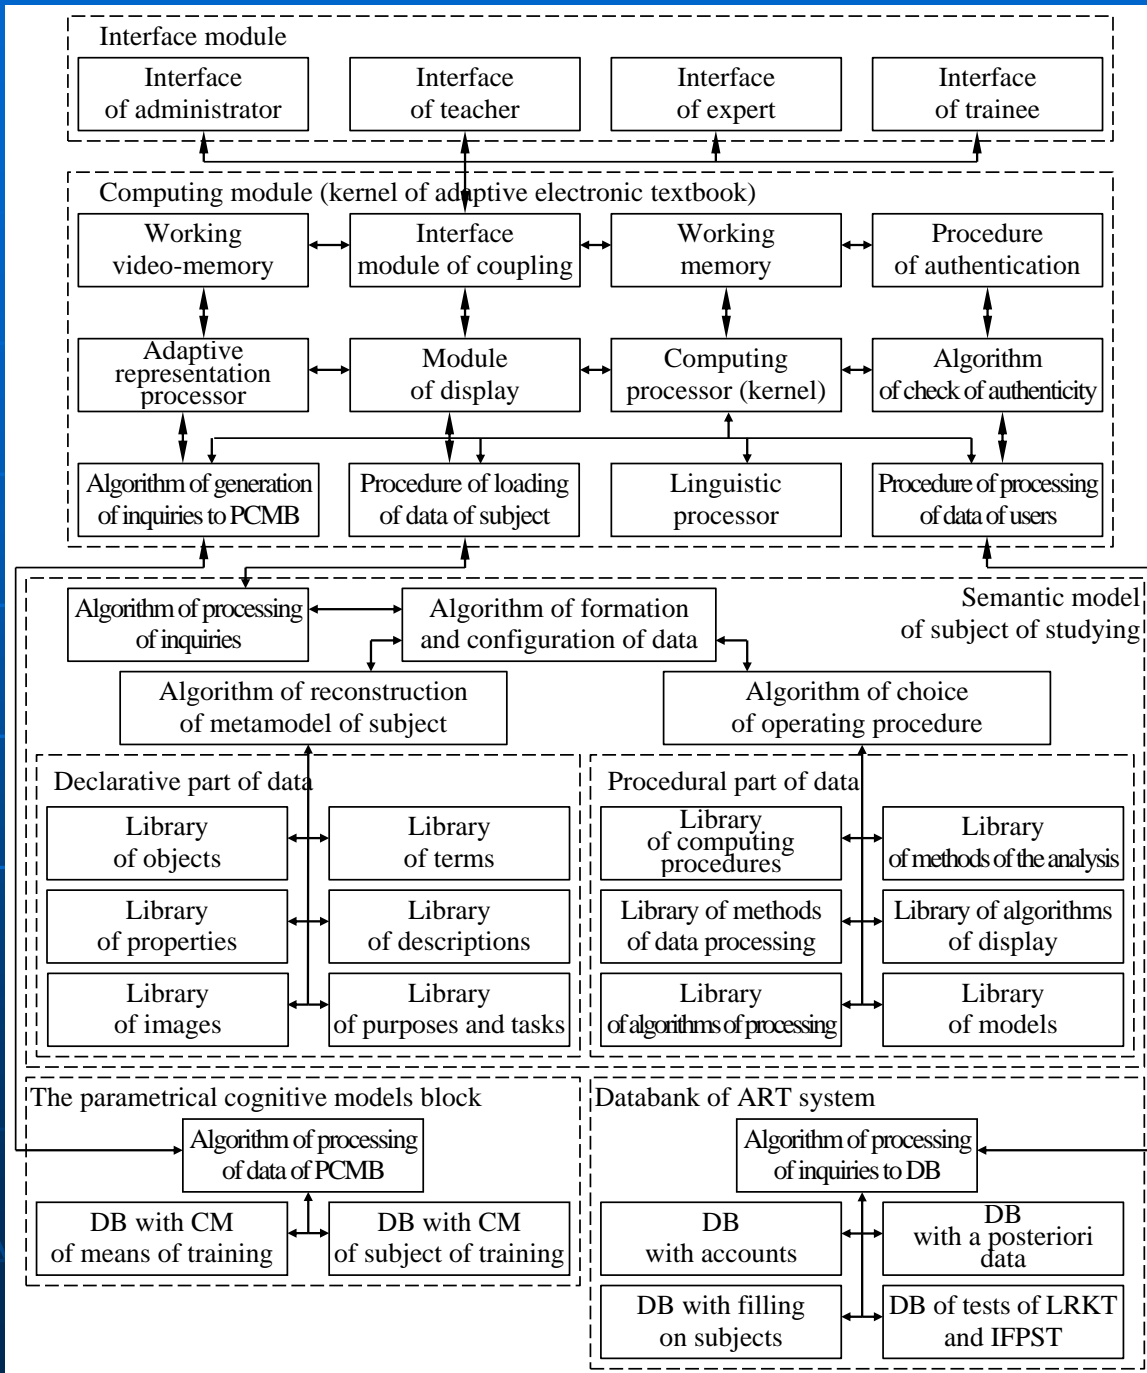

The scheme, reflecting the principle (algorithm) of functioning of the electronic textbook with adaptation based on the parametrical cognitive models block

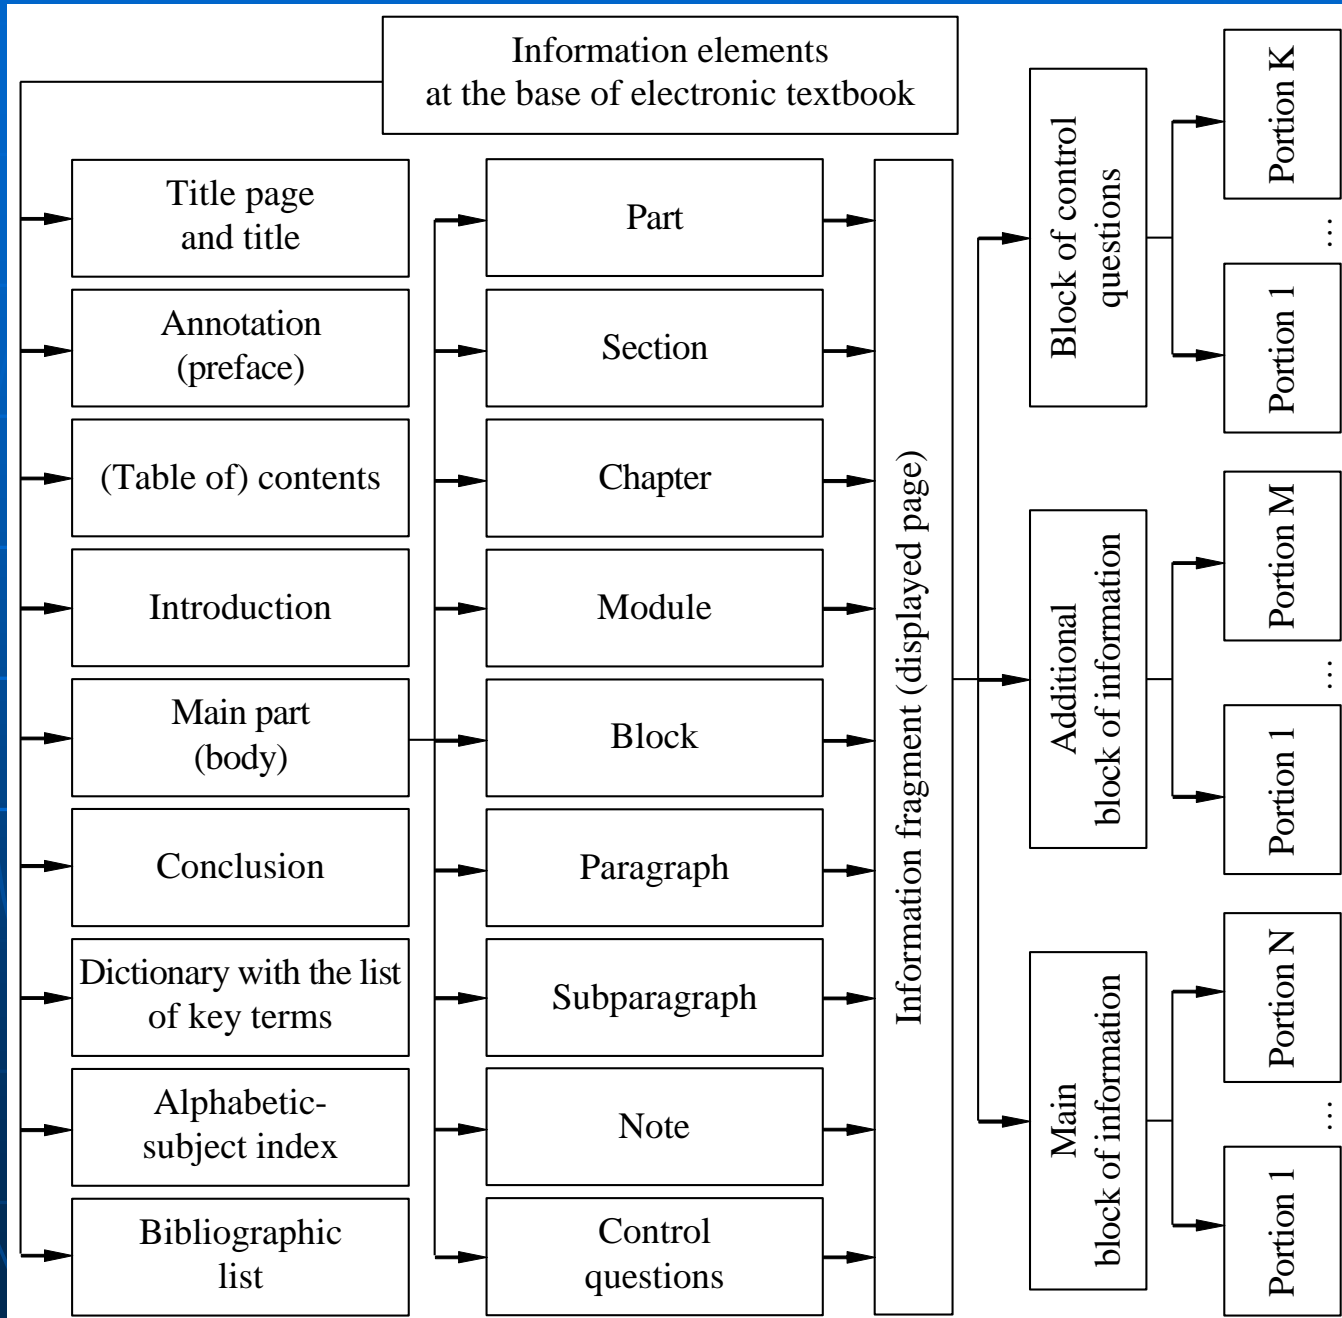

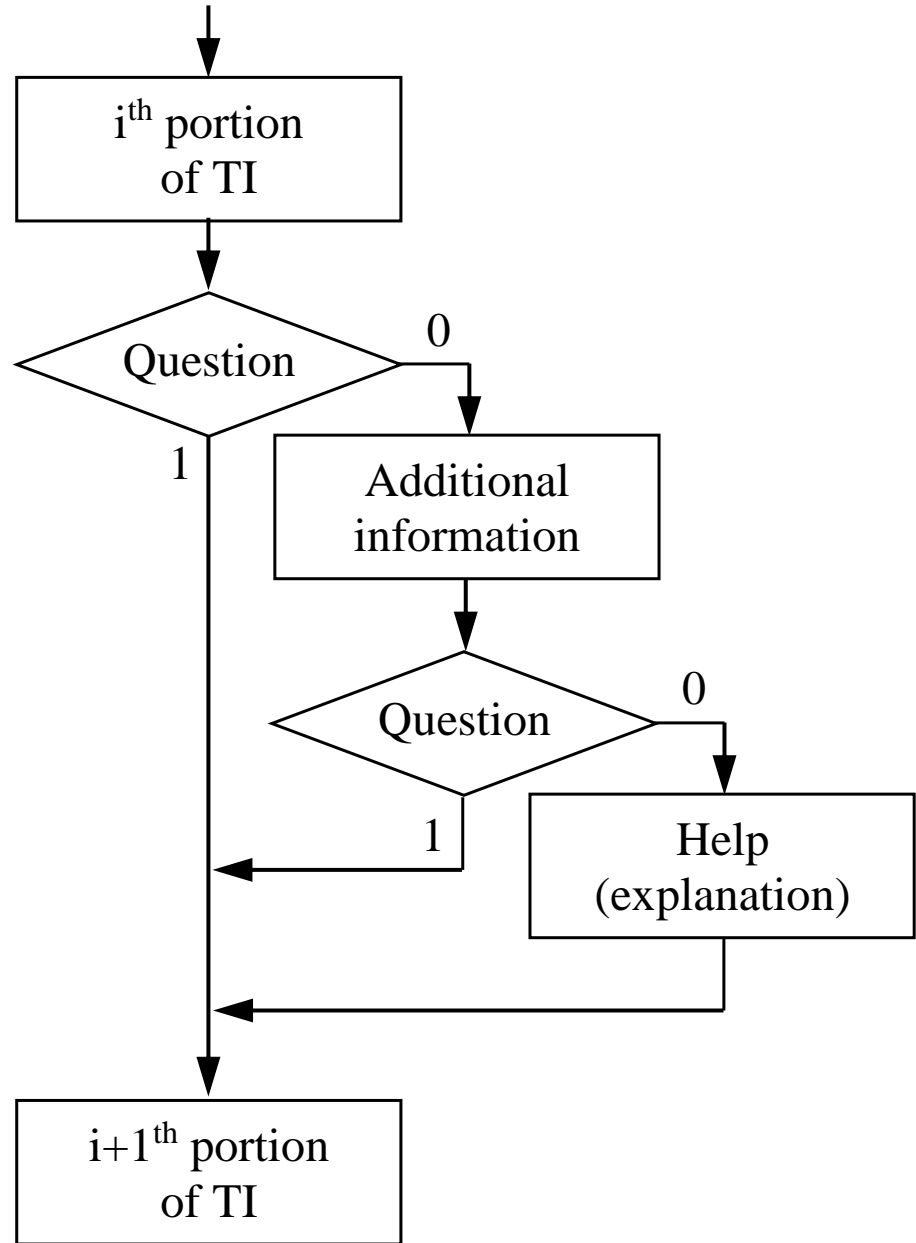

# The features of architecture of the adaptive electronic textbook

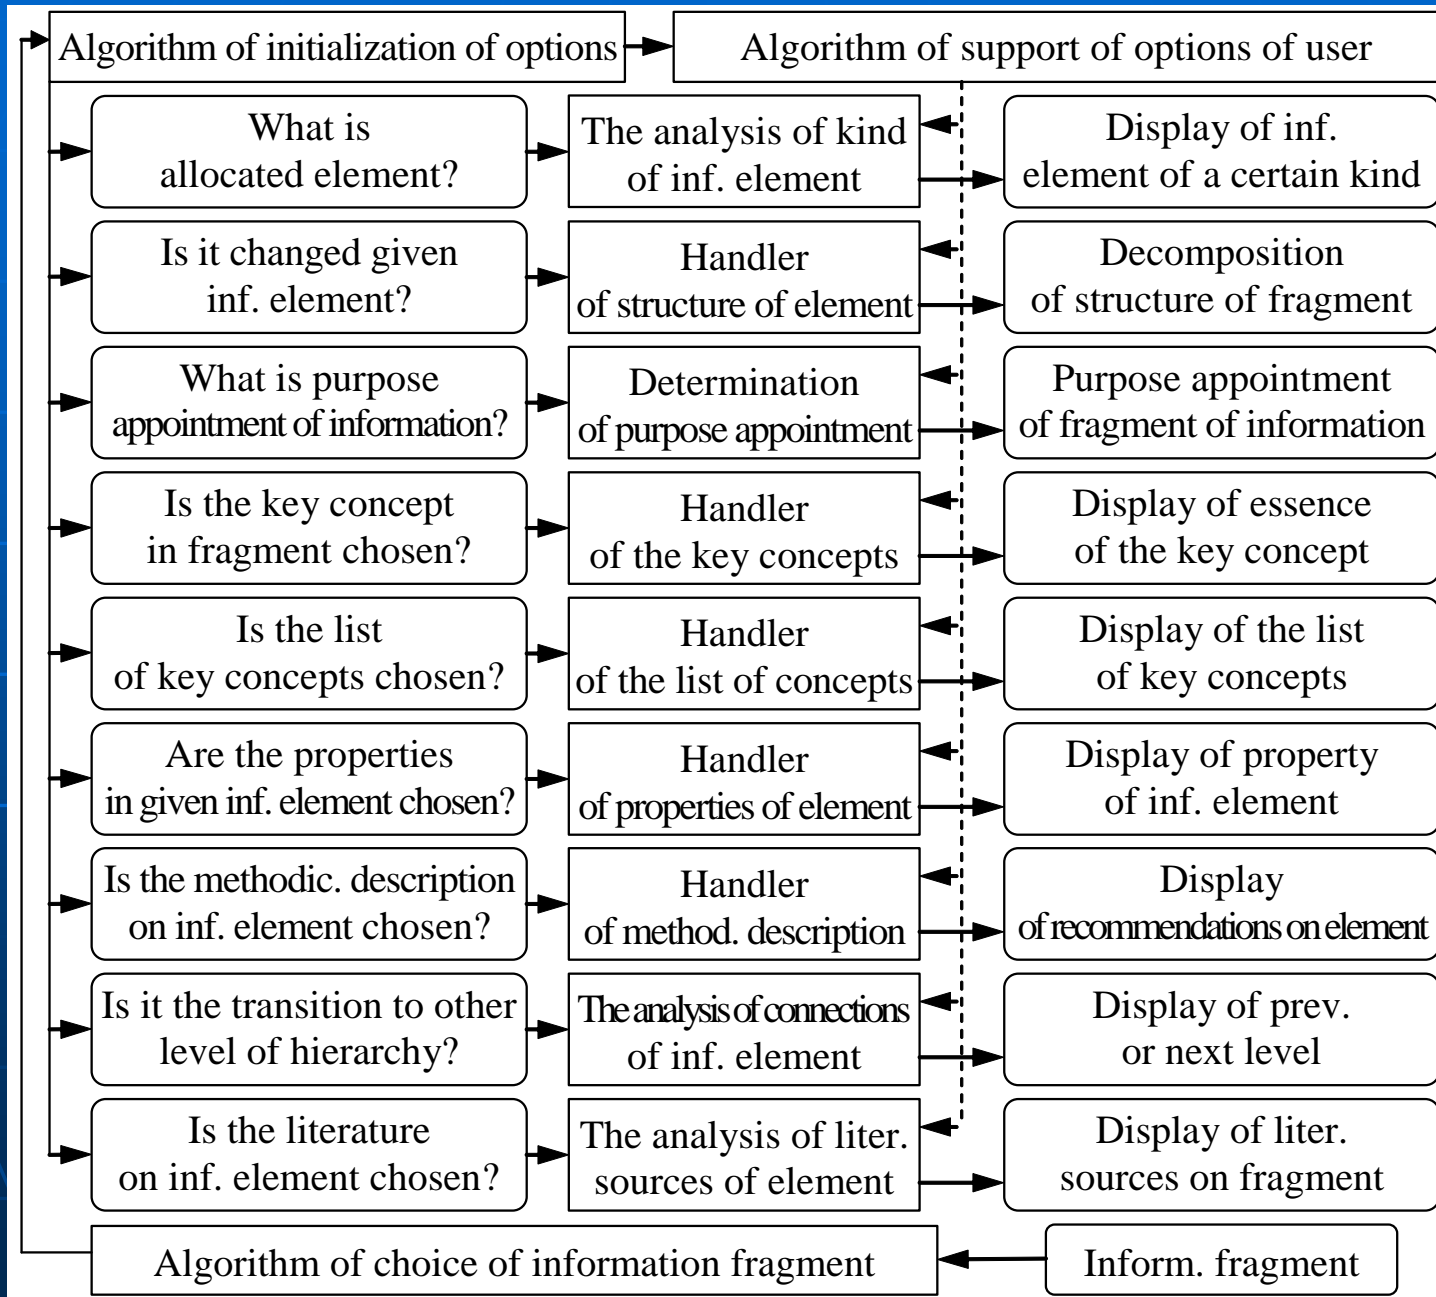

# The information structure of the subject of studying, displayed at the level of representation of data by means of the electronic textbook

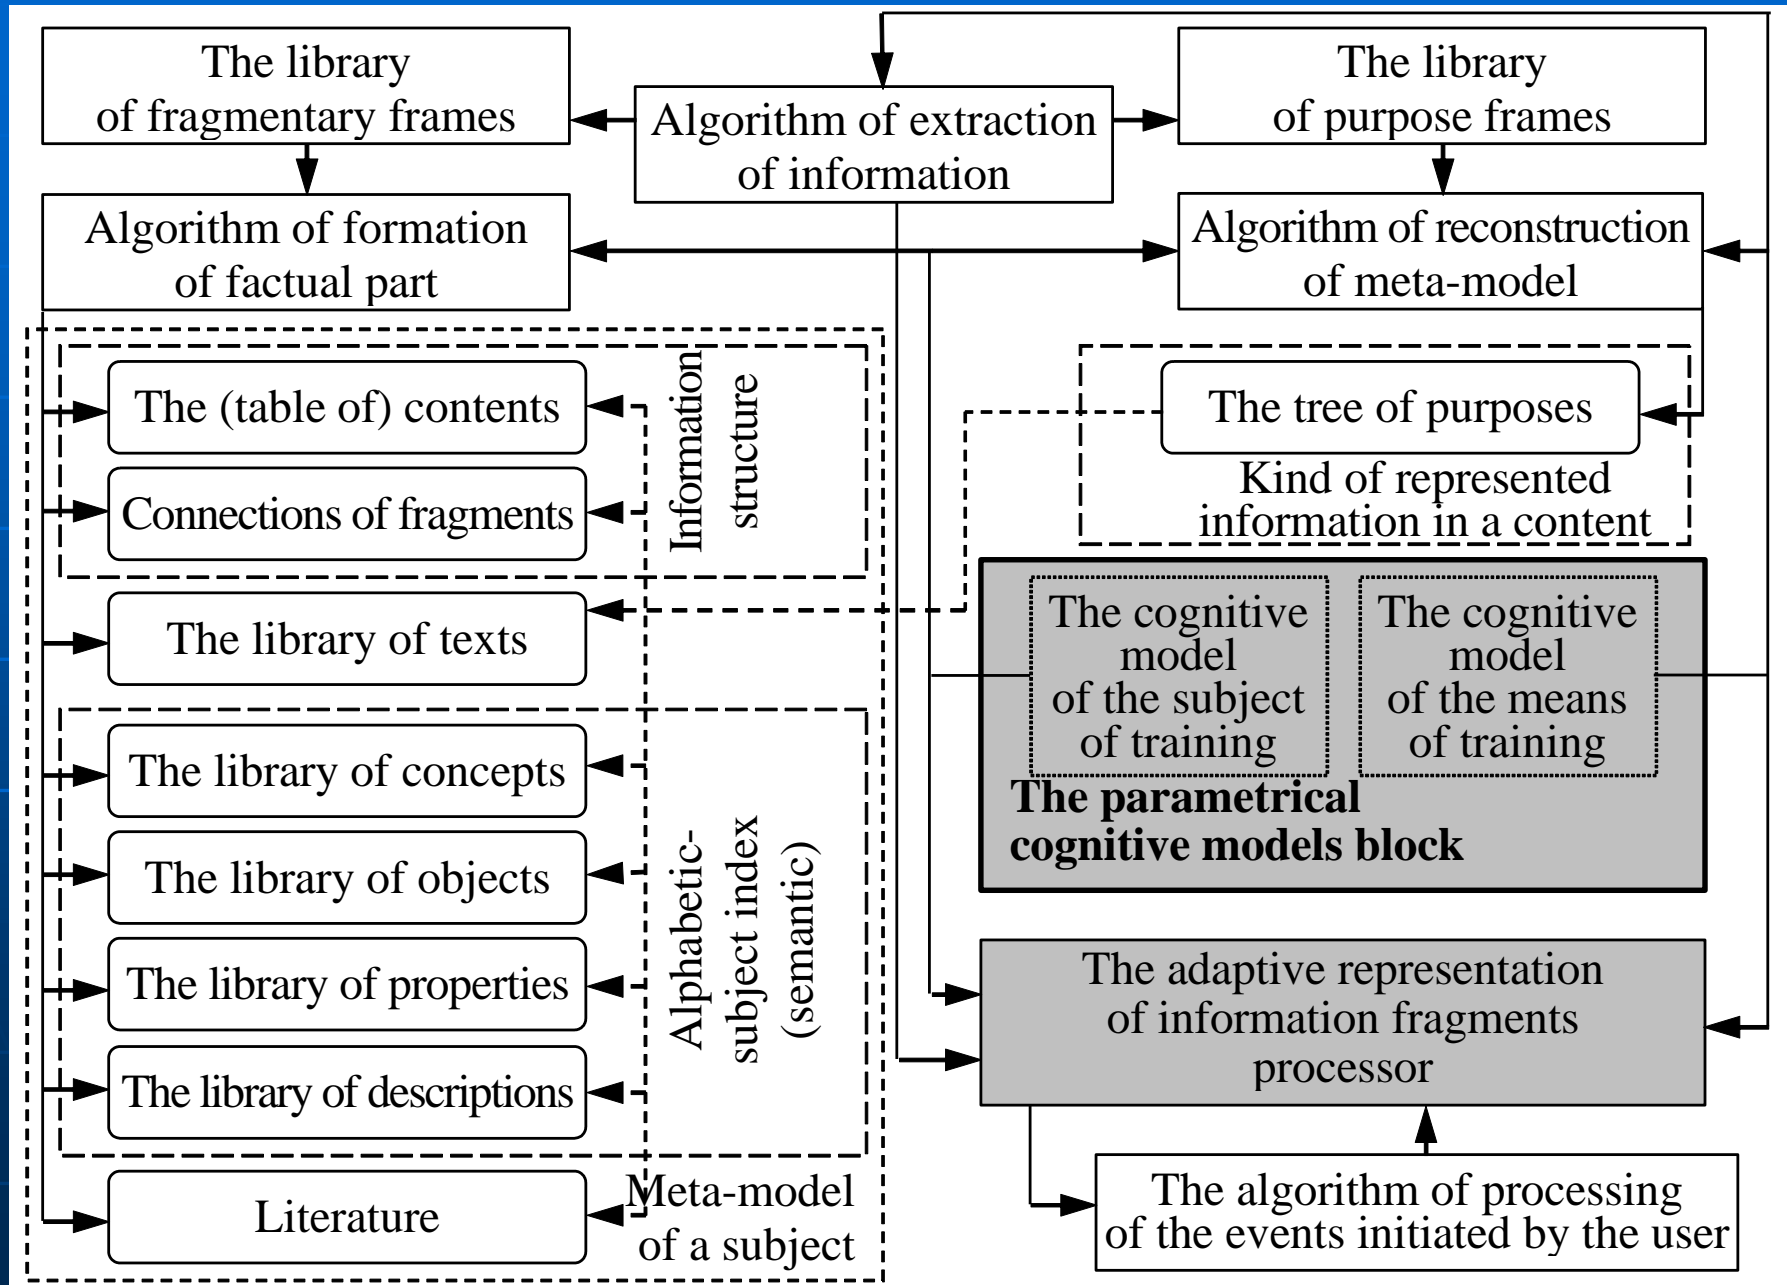

The schemes of realization of branching (1 – correct answer, 0 – wrong answer):  
at the left – the linear model and at the right – the branched model

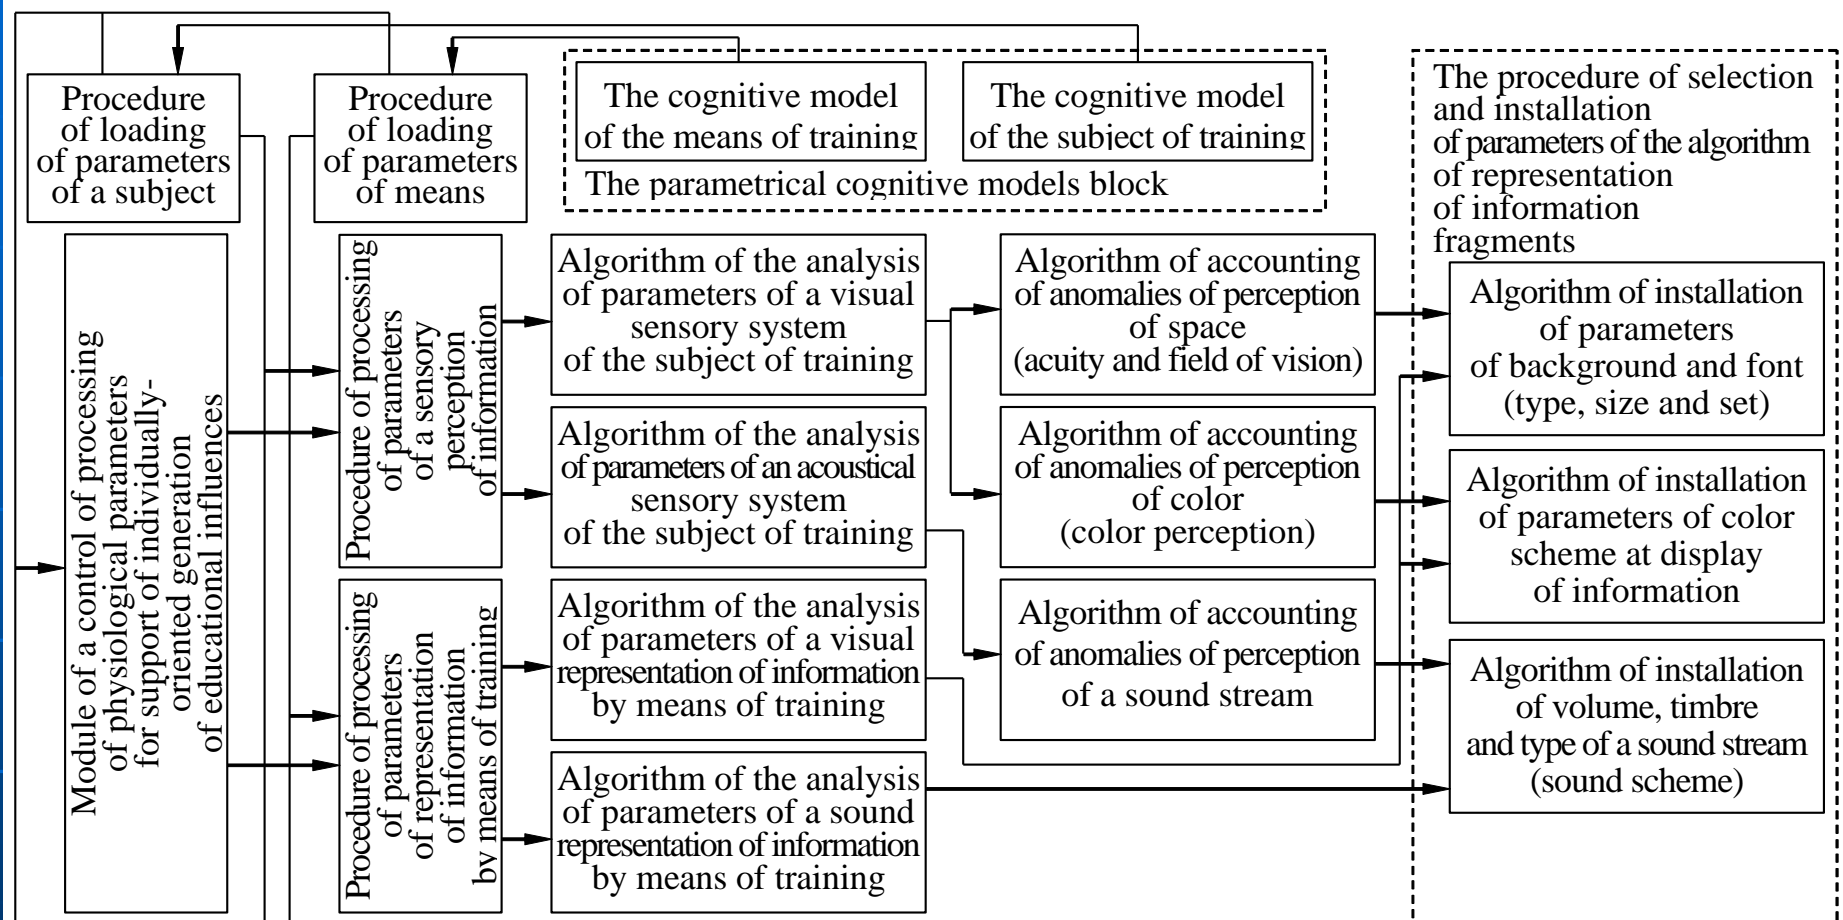

# The algorithm of processing of events initiated by the user in the adaptive means of training (electronic textbook)

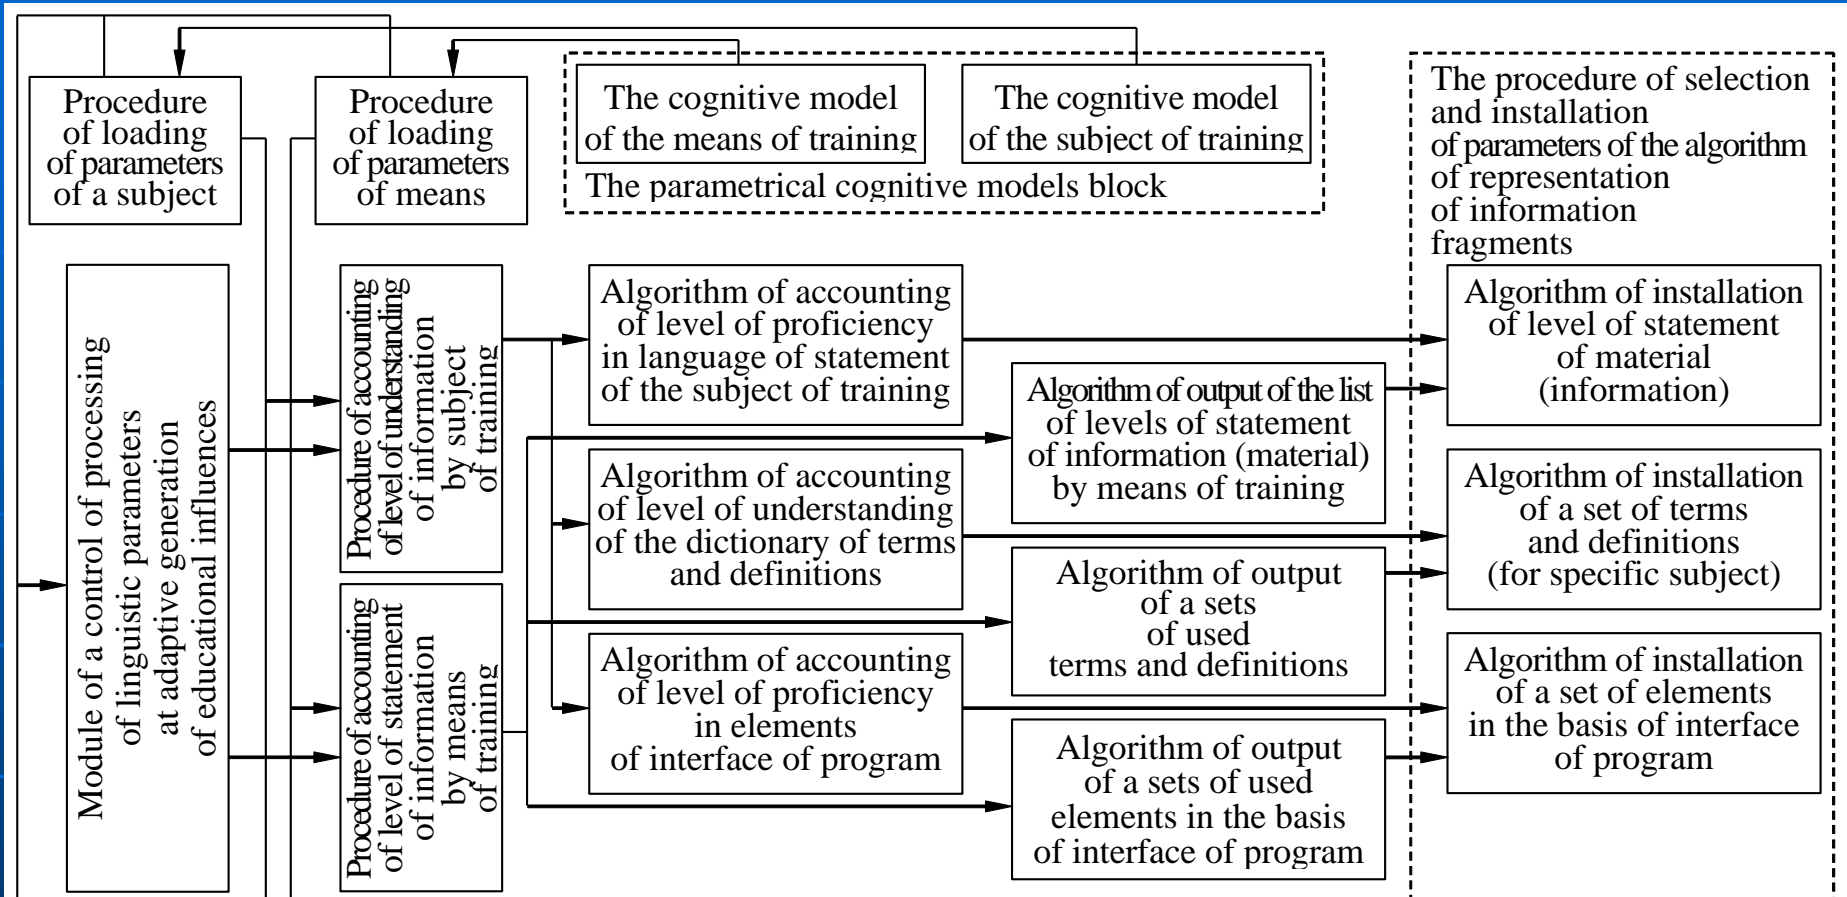

# The structurally-functional scheme of the adaptive representation of information fragments processor (1 from 3)

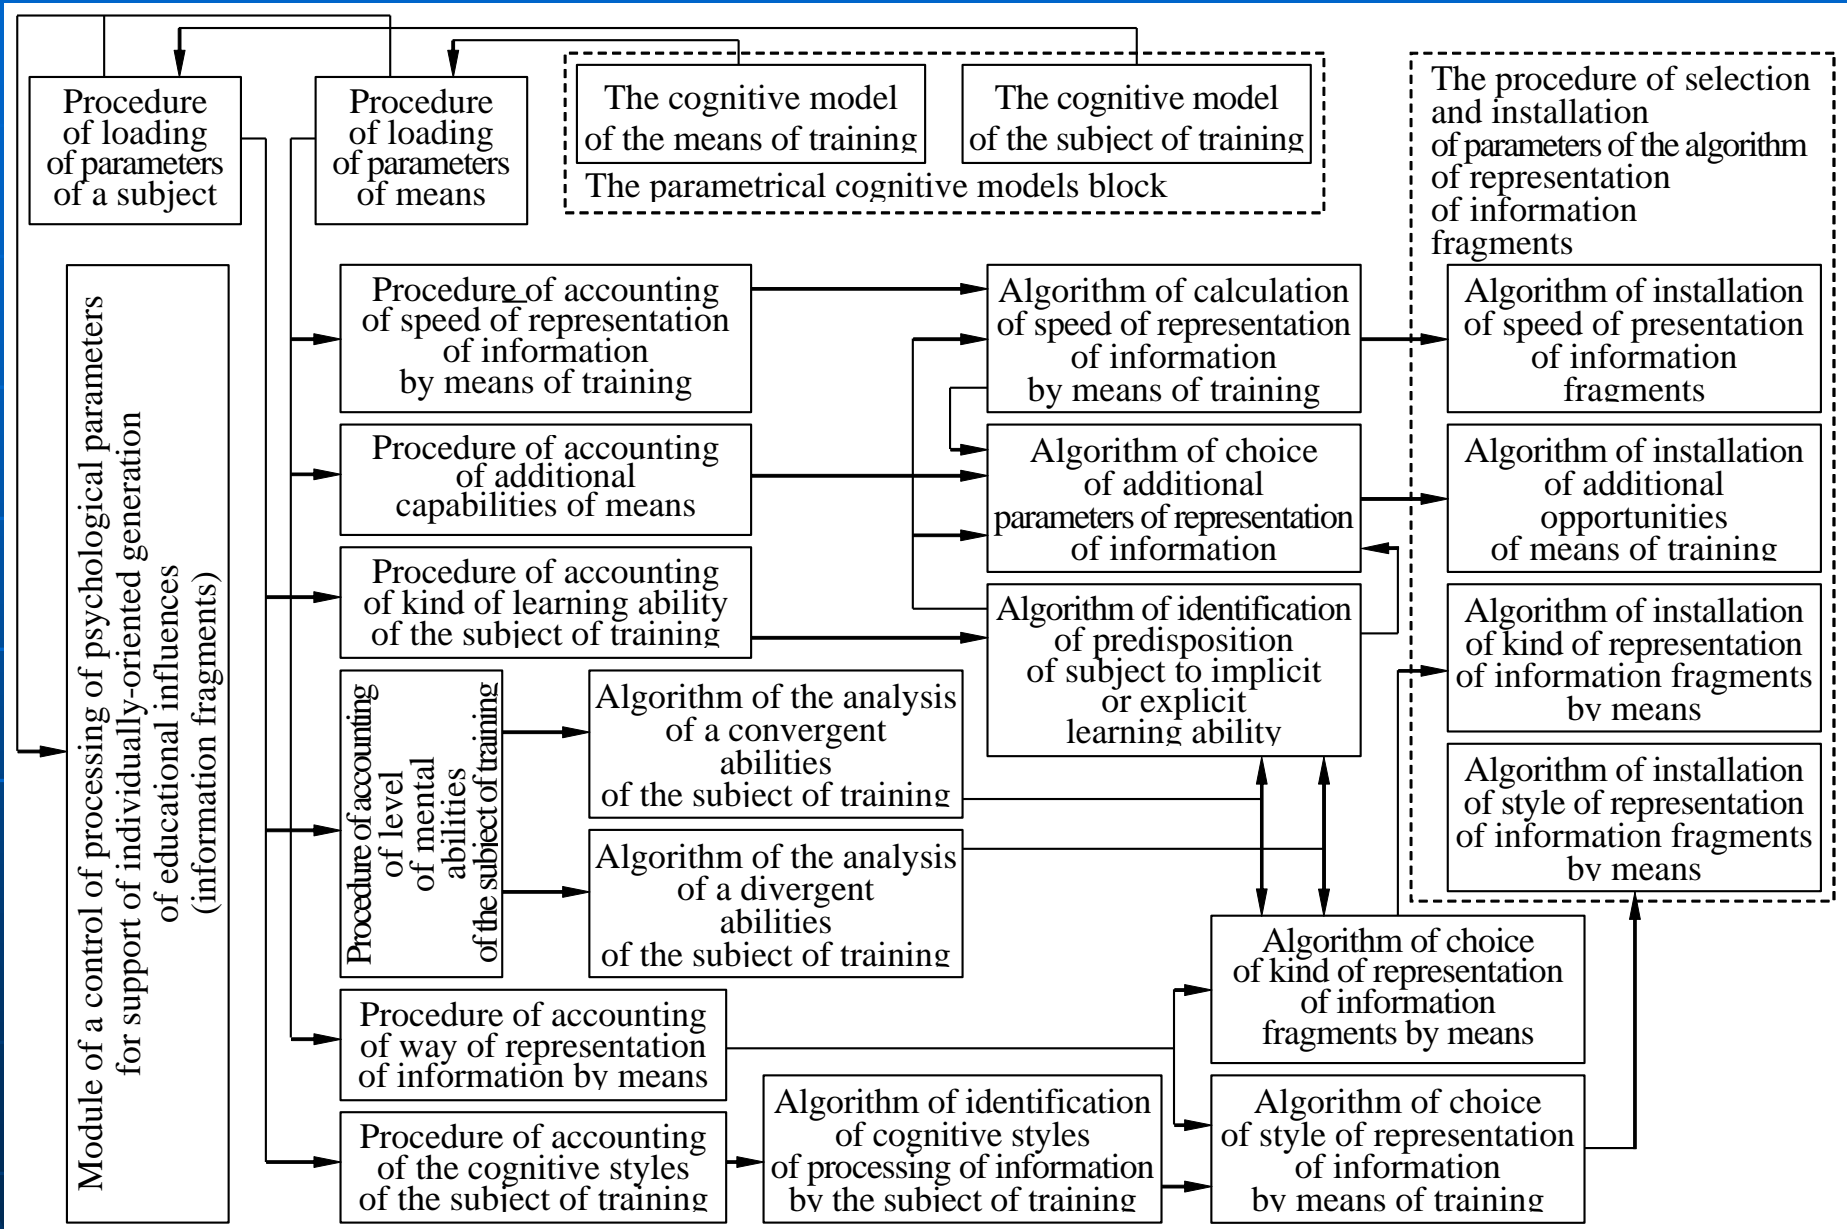

1.8.1

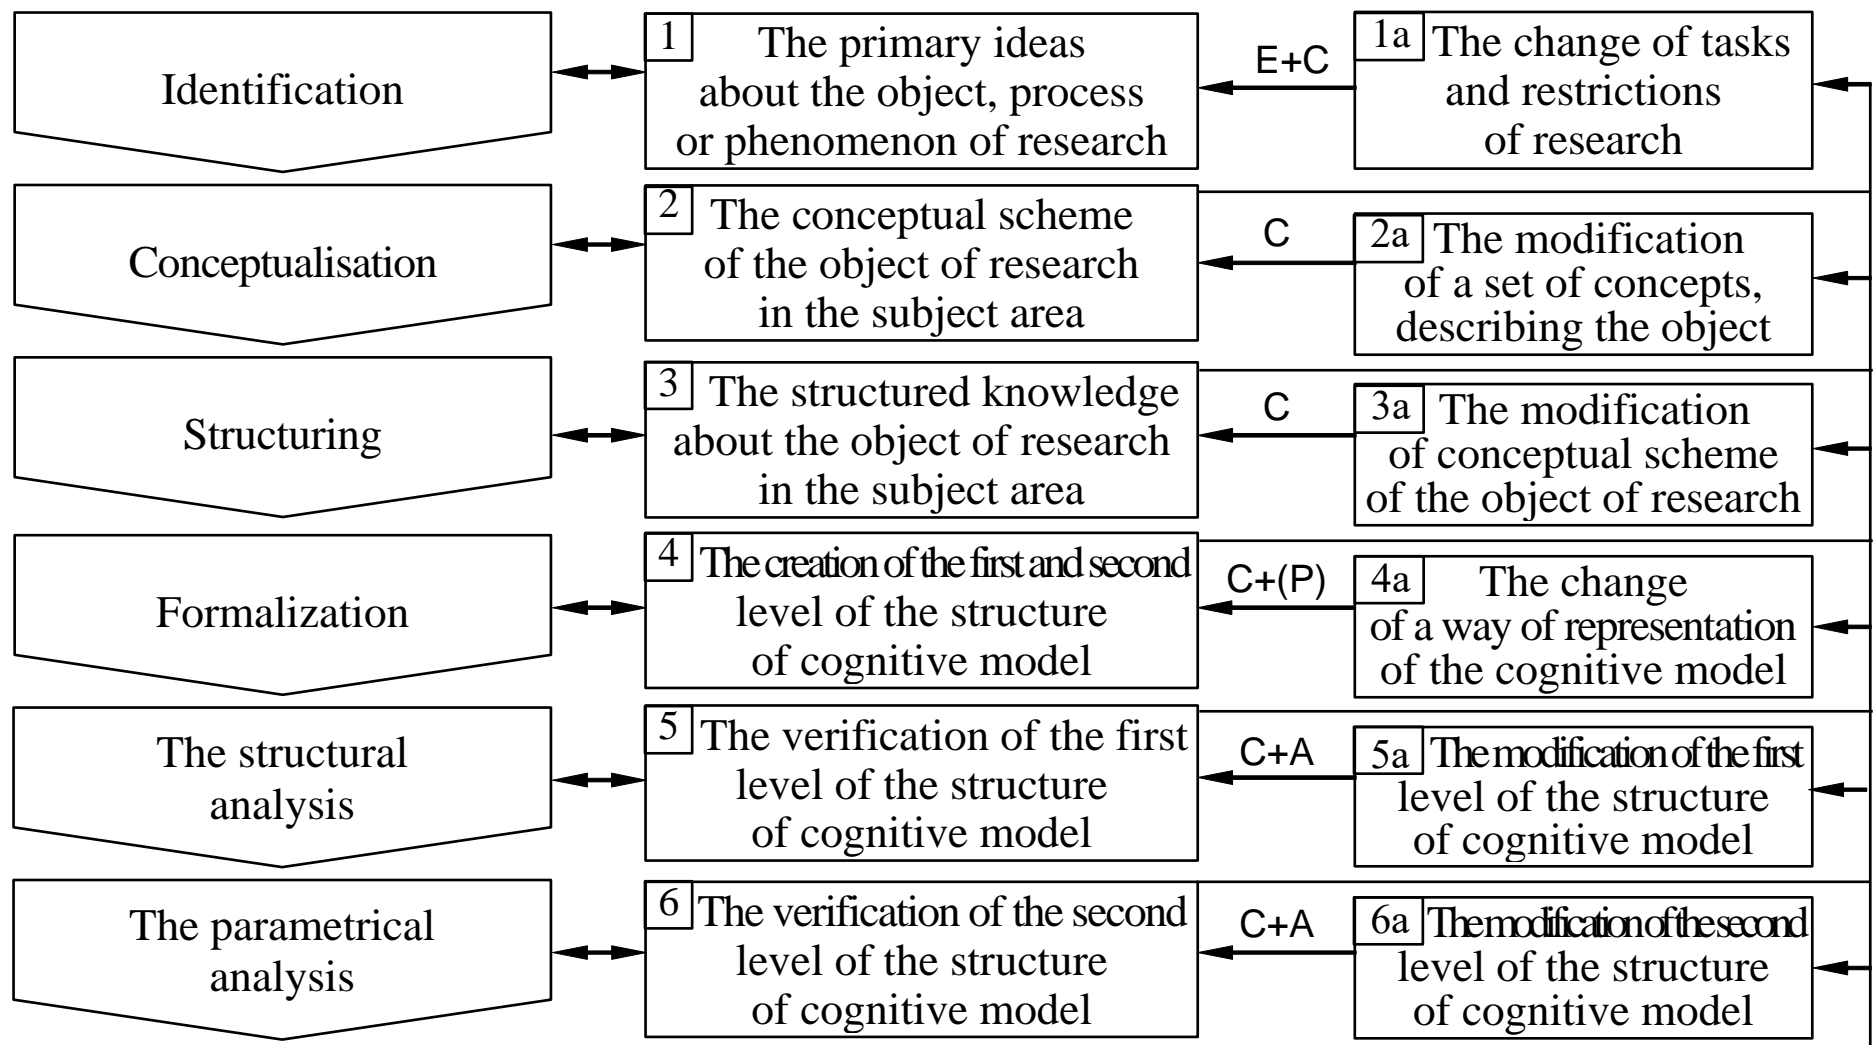

# The structurally-functional scheme of the adaptive representation of information fragments processor (2 from 3)

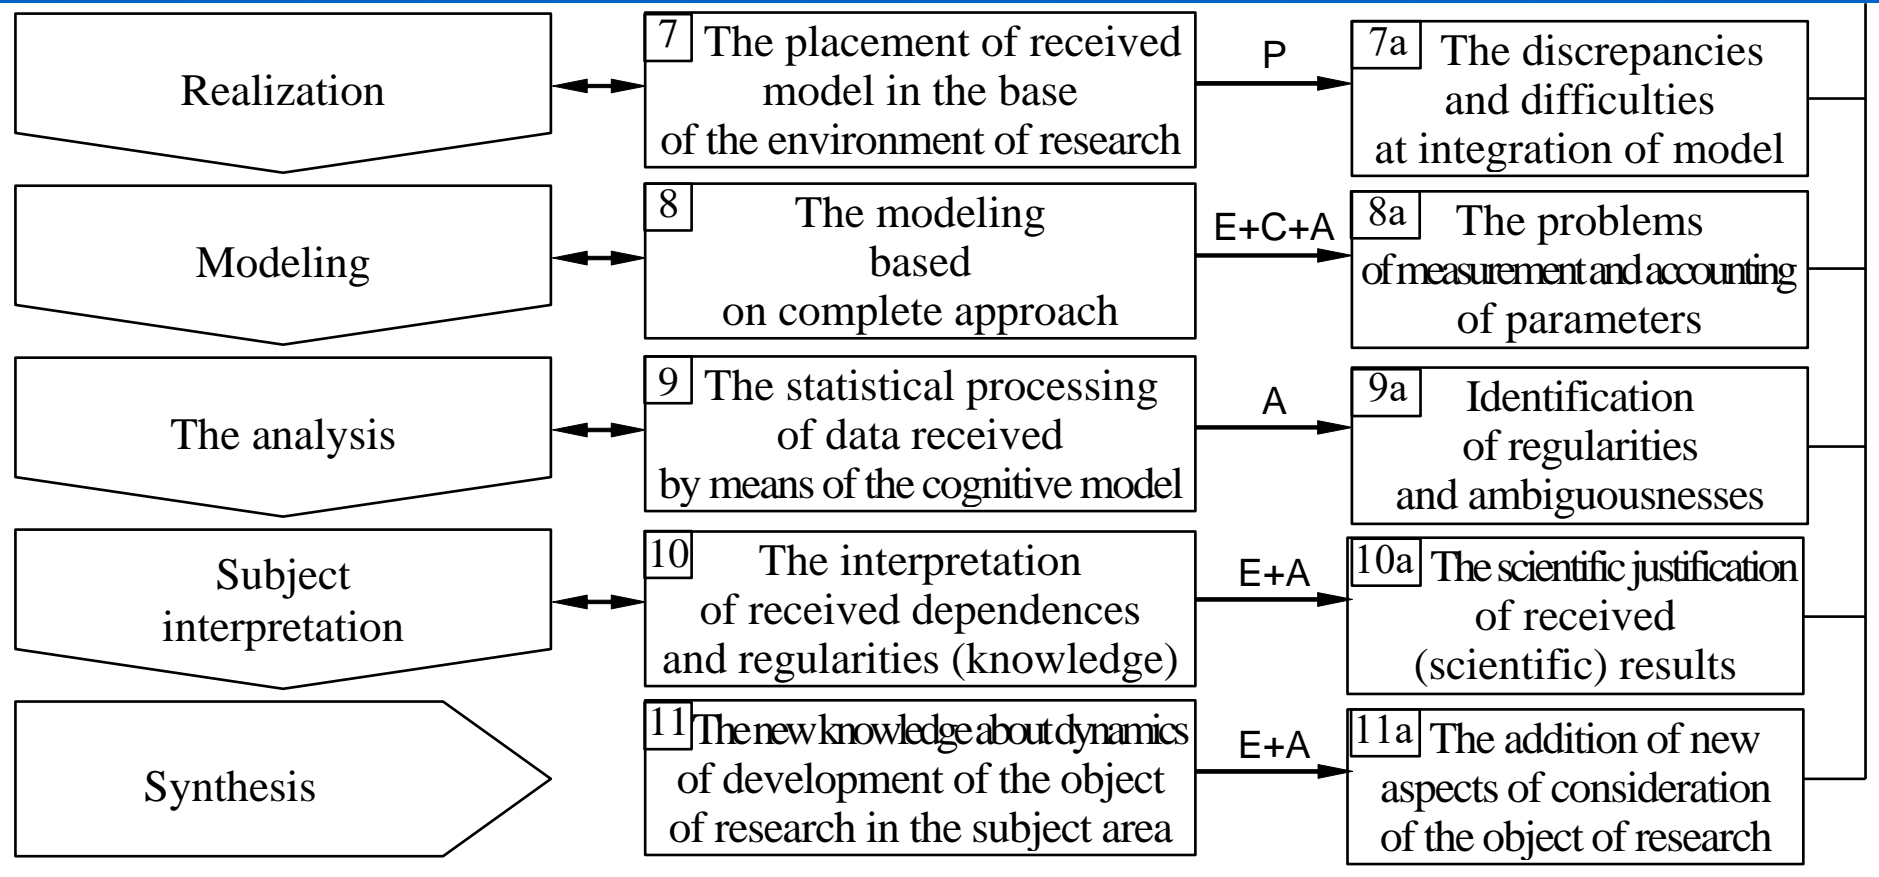

# The structurally-functional scheme of the adaptive representation of information fragments processor (3 from 3)

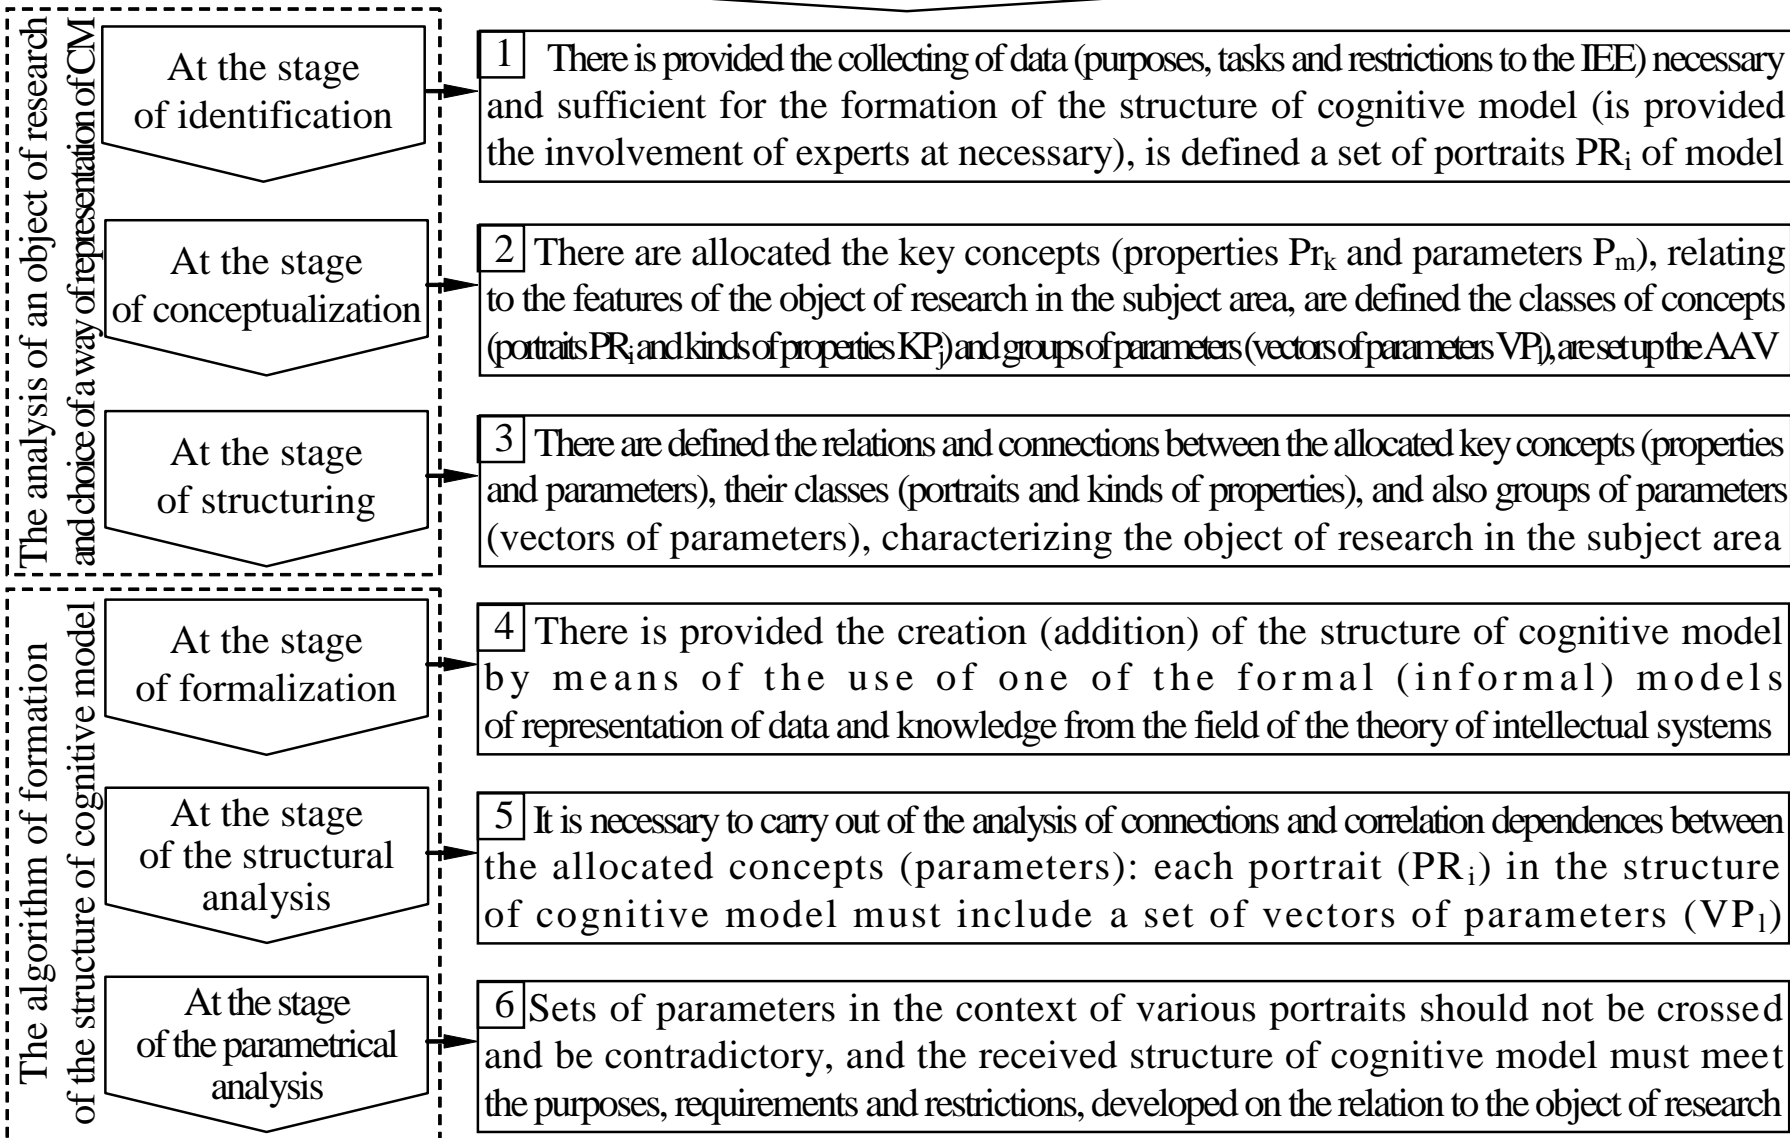

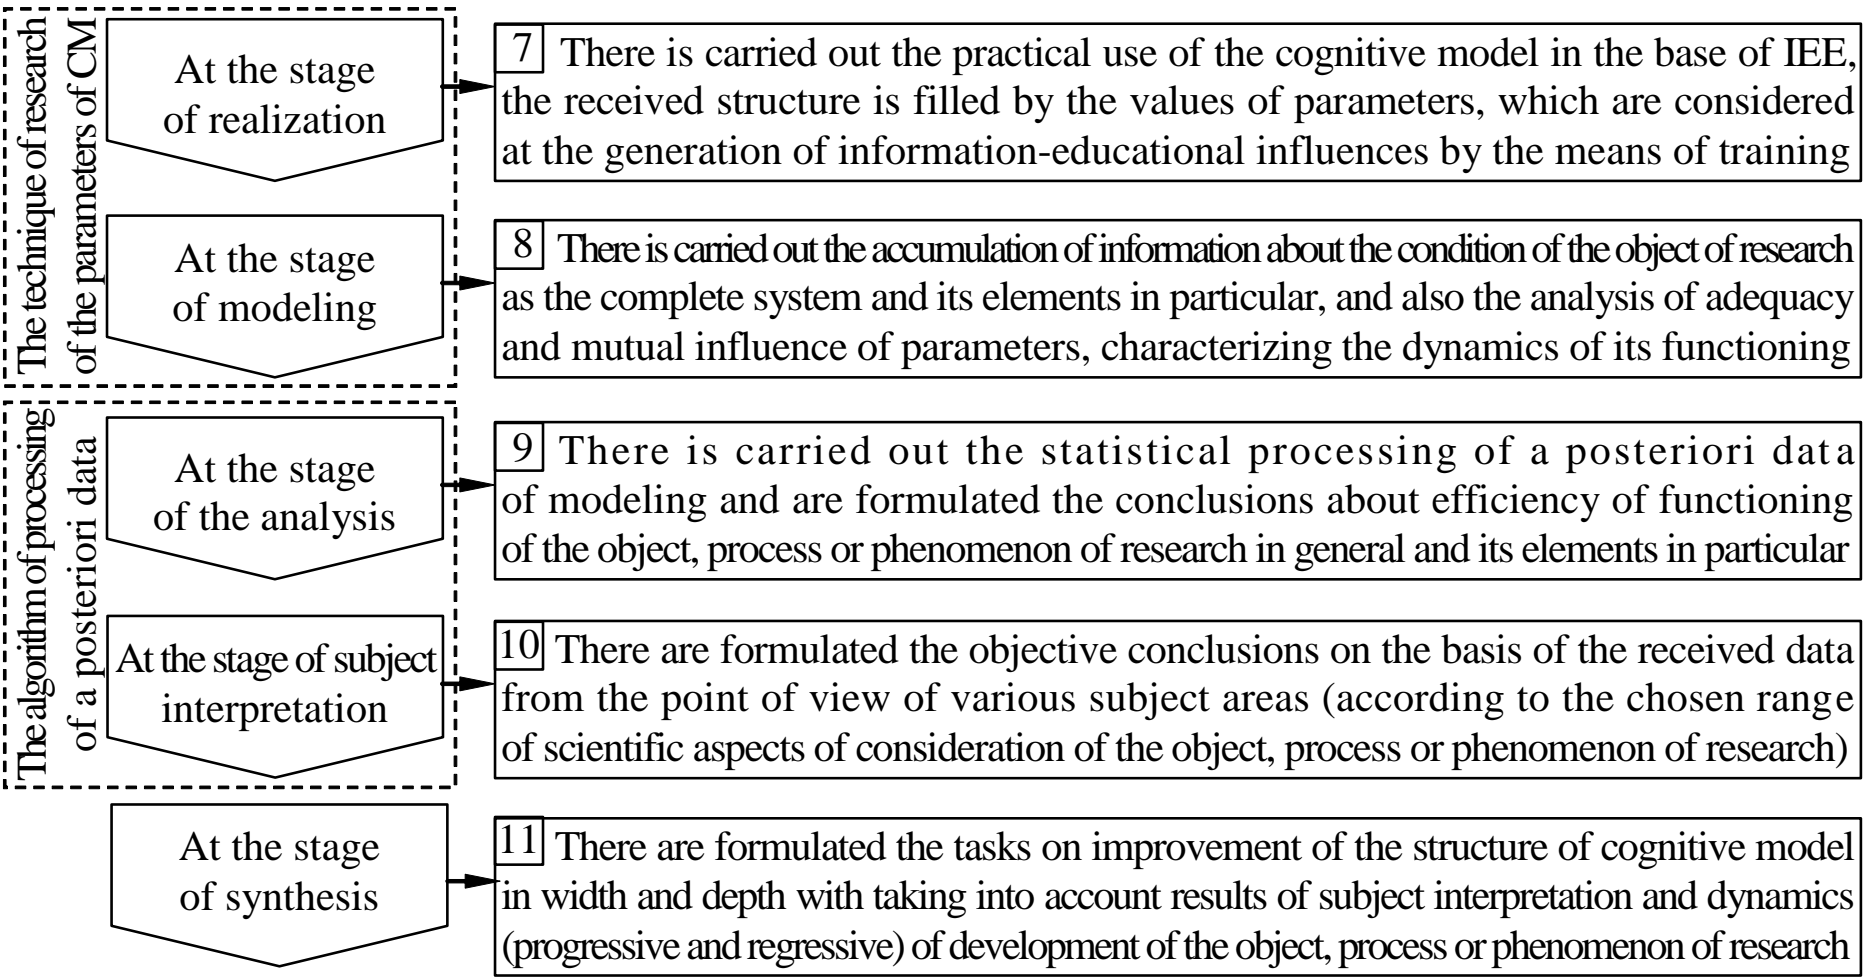

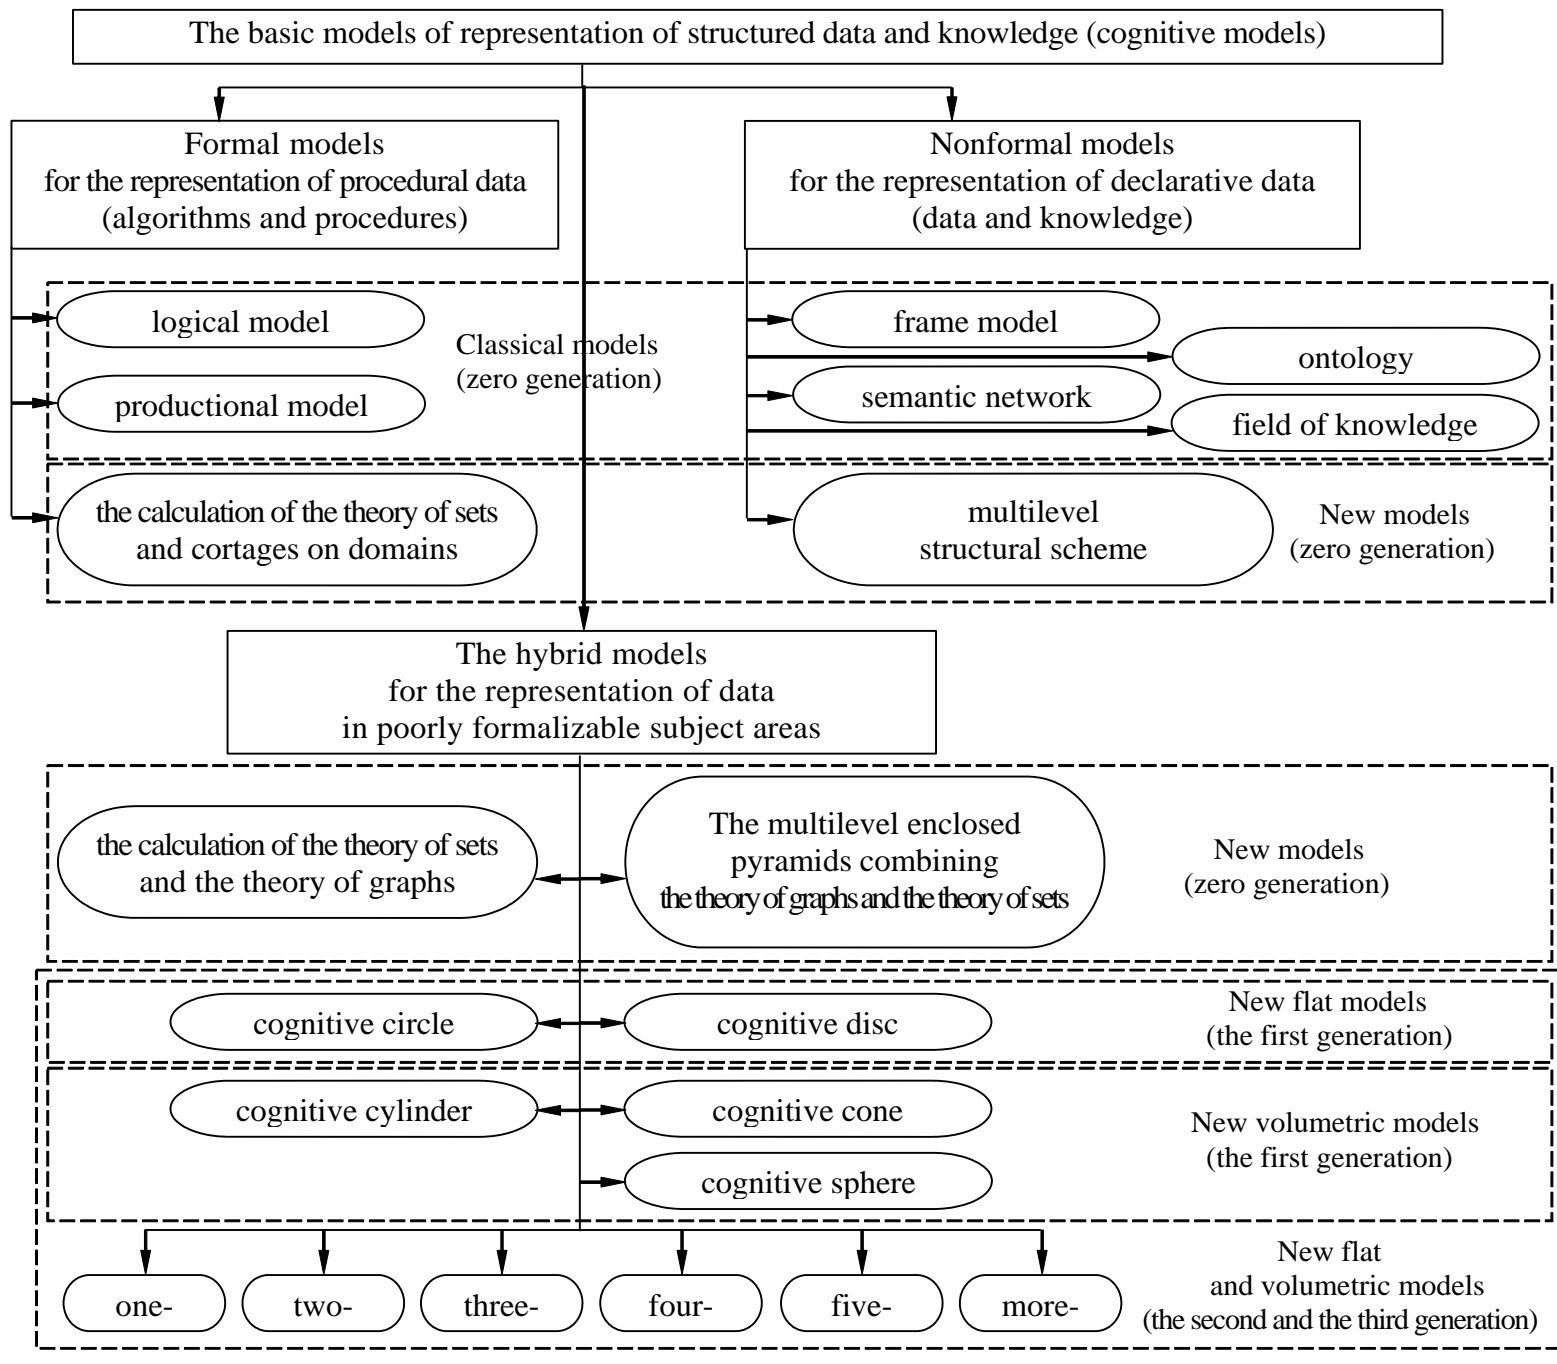

For the use of the cognitive modeling technology in relation to the object of research in the subject area it is necessary to satisfy a set of conditions at each stage

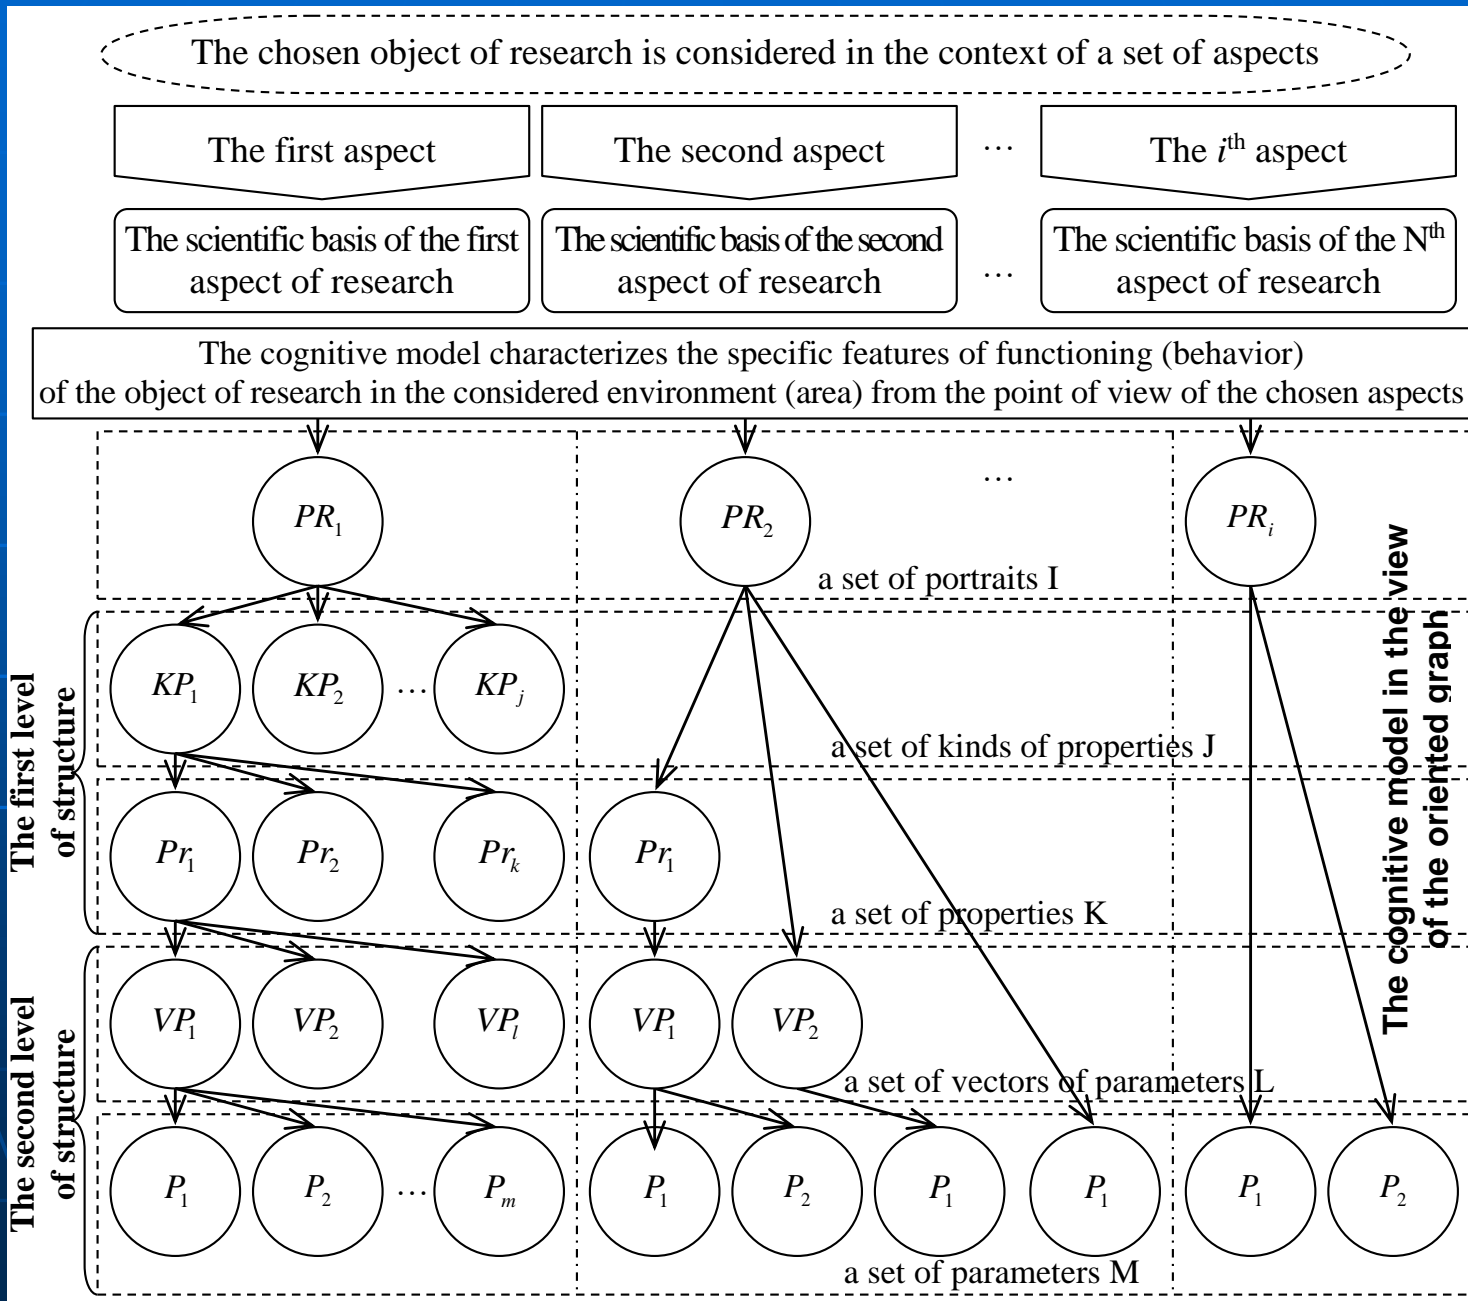

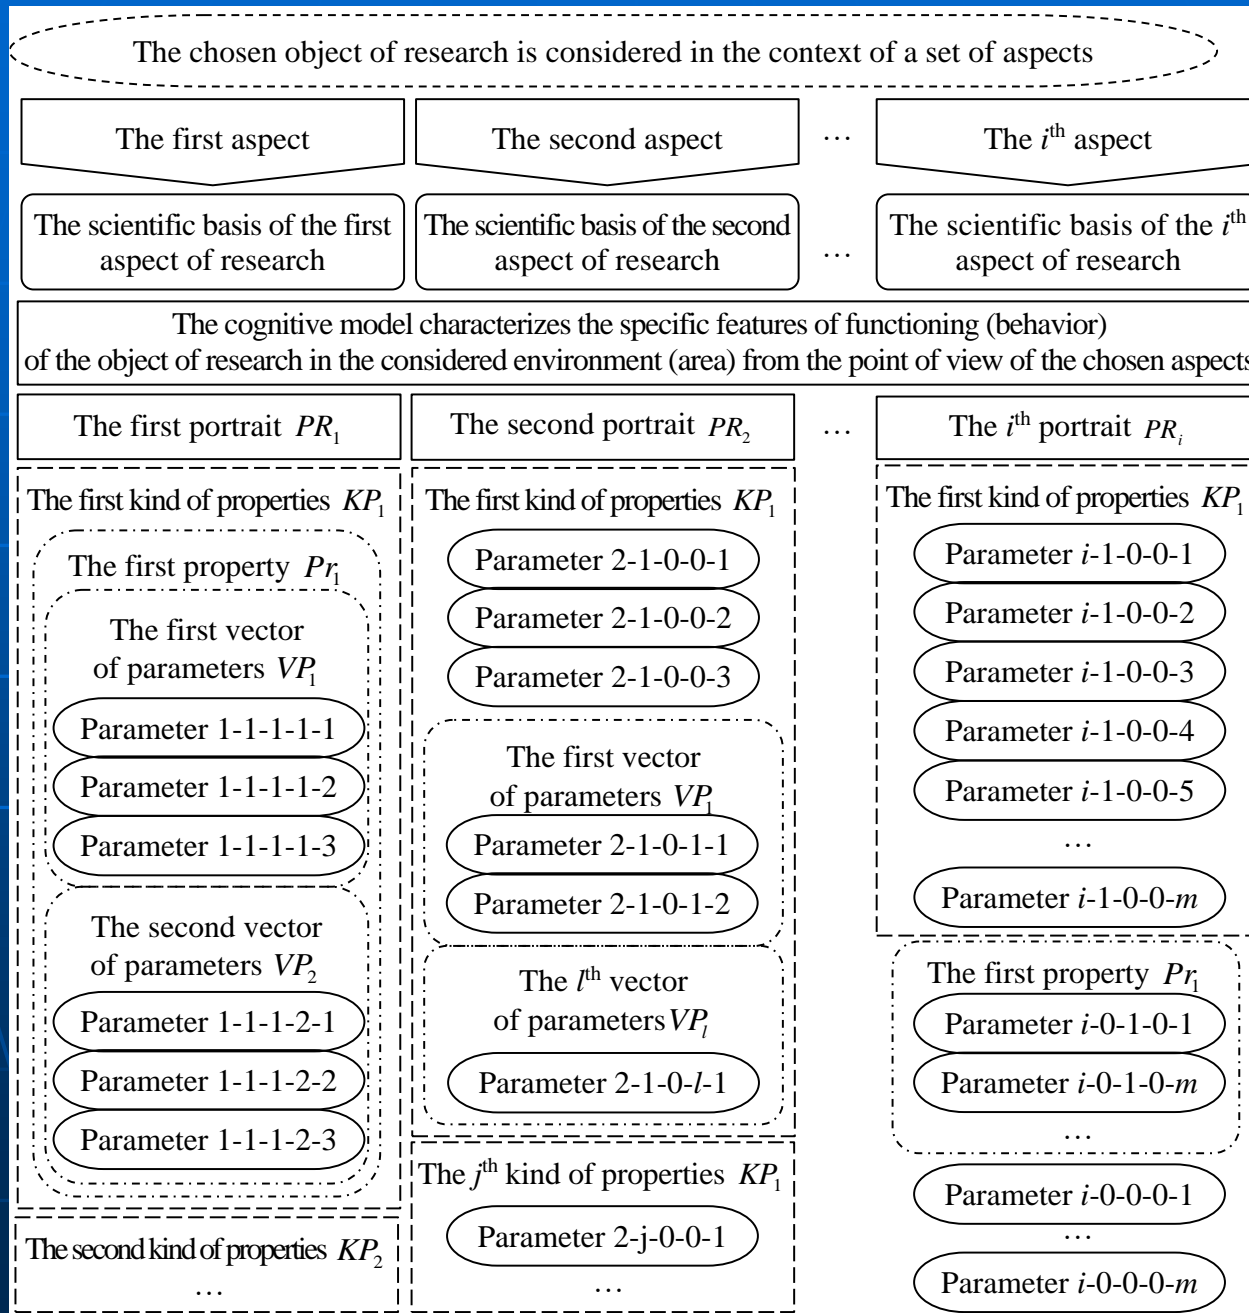

# The recommended bases for the construction of the structure of cognitive model

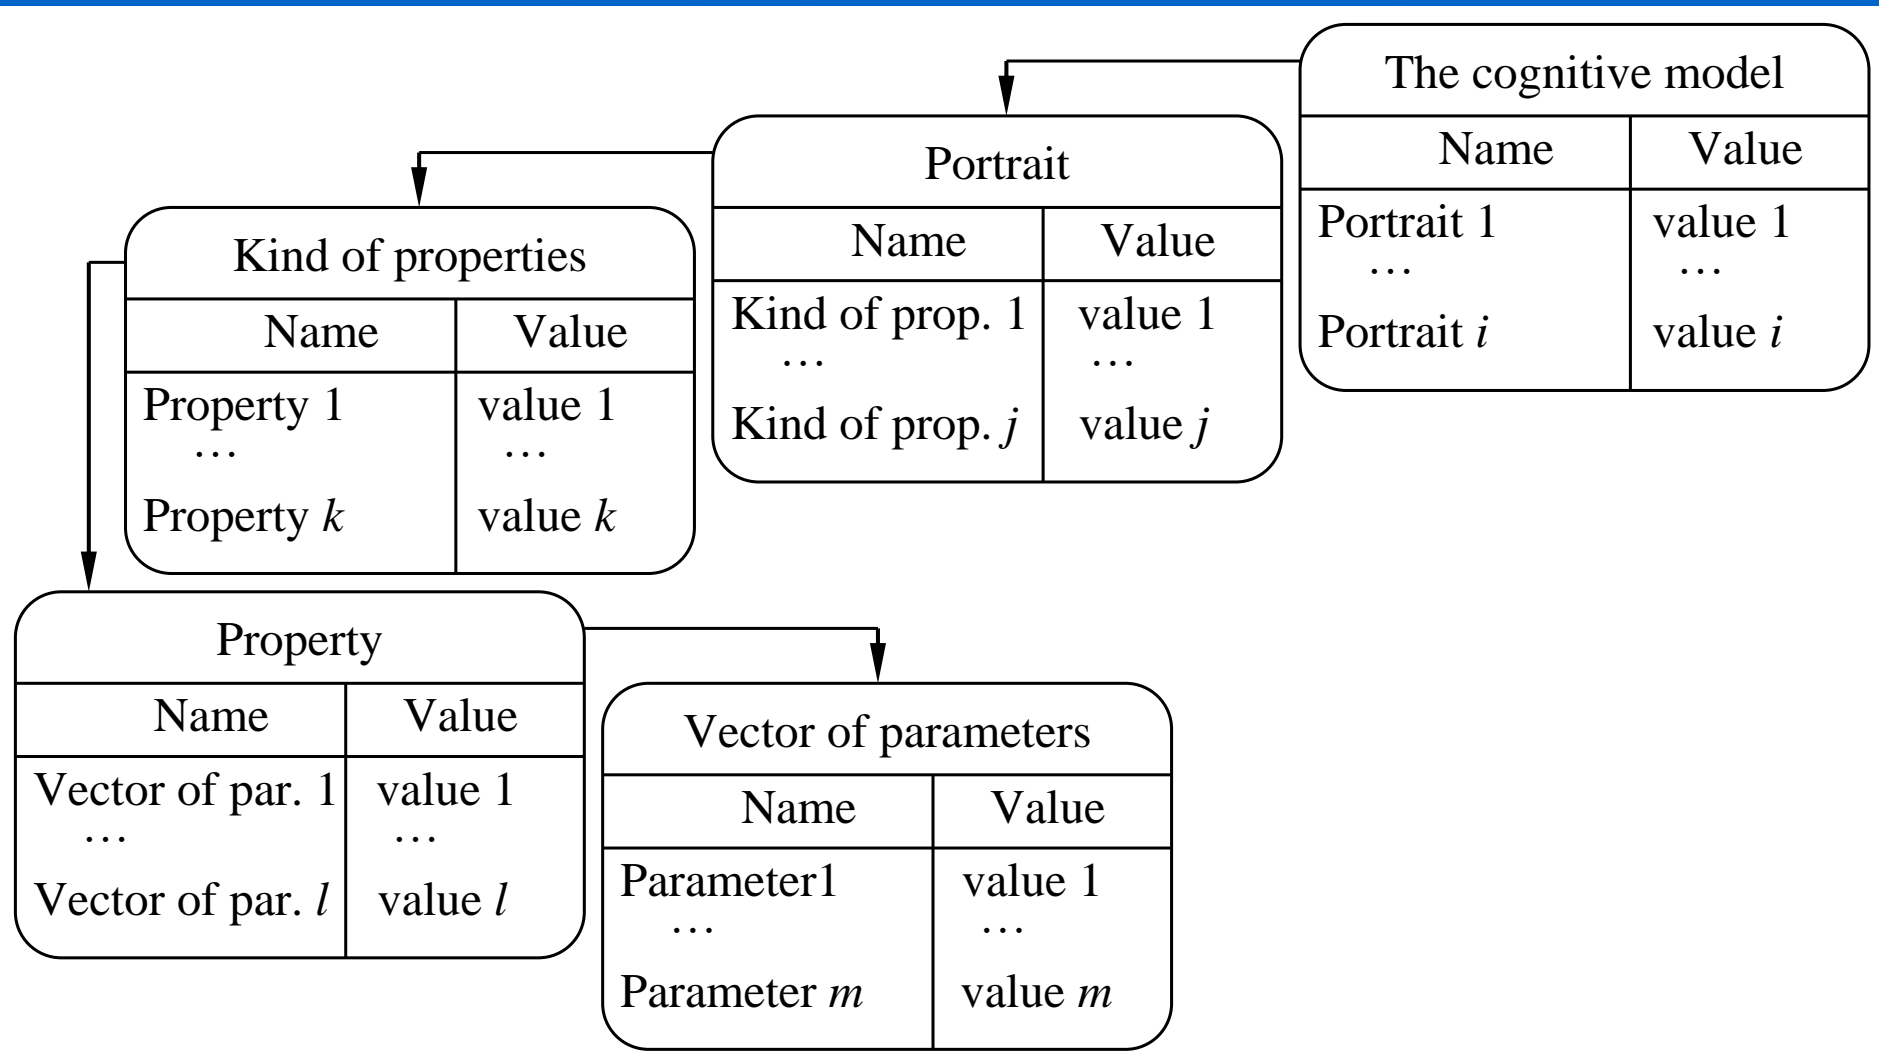

# The recommended basis for the construction of the structure of cognitive model in the view of the oriented graph combining the theory of sets

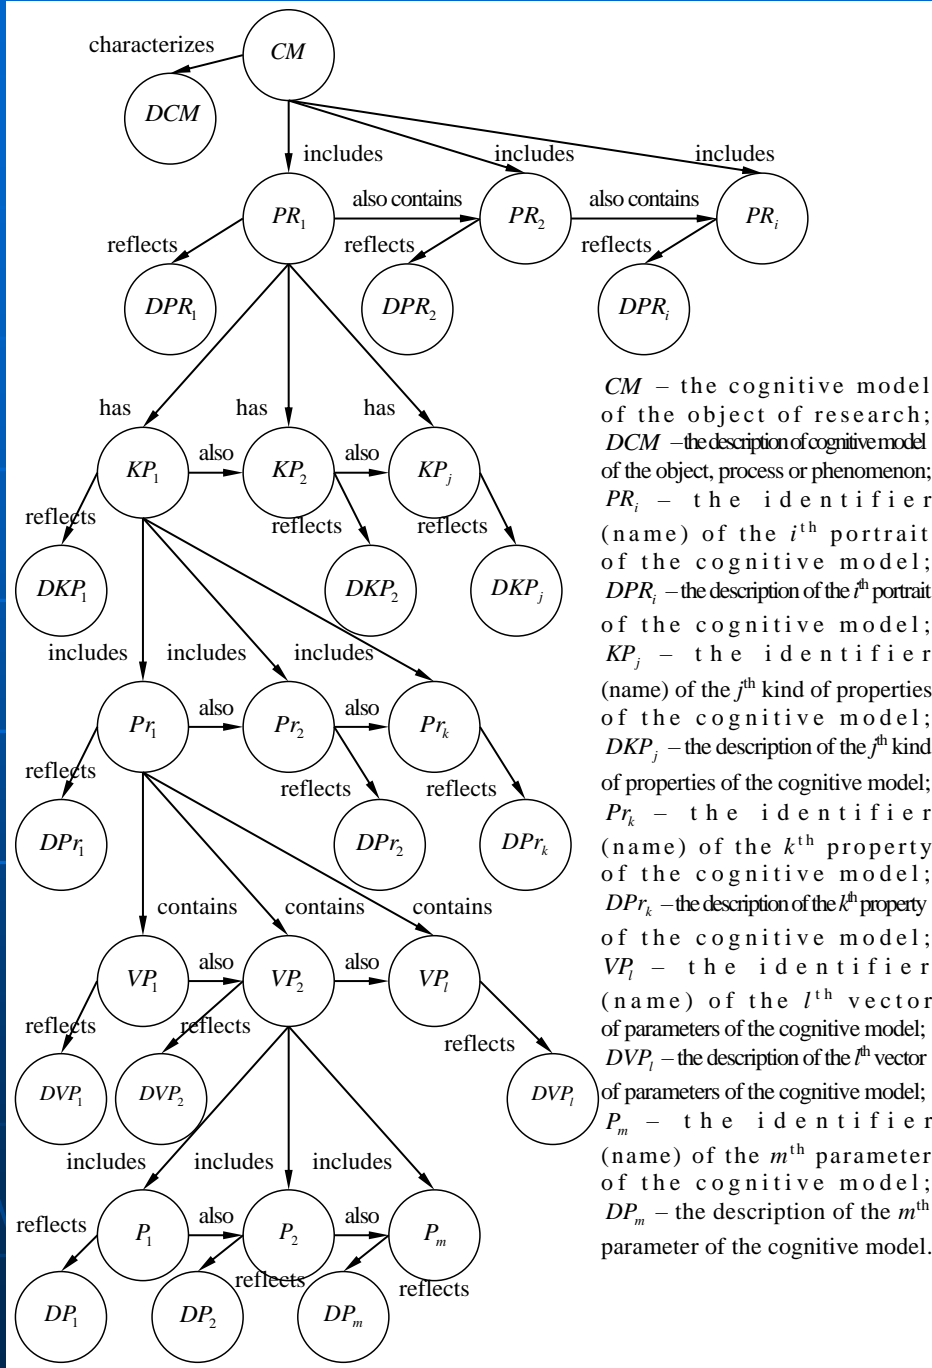

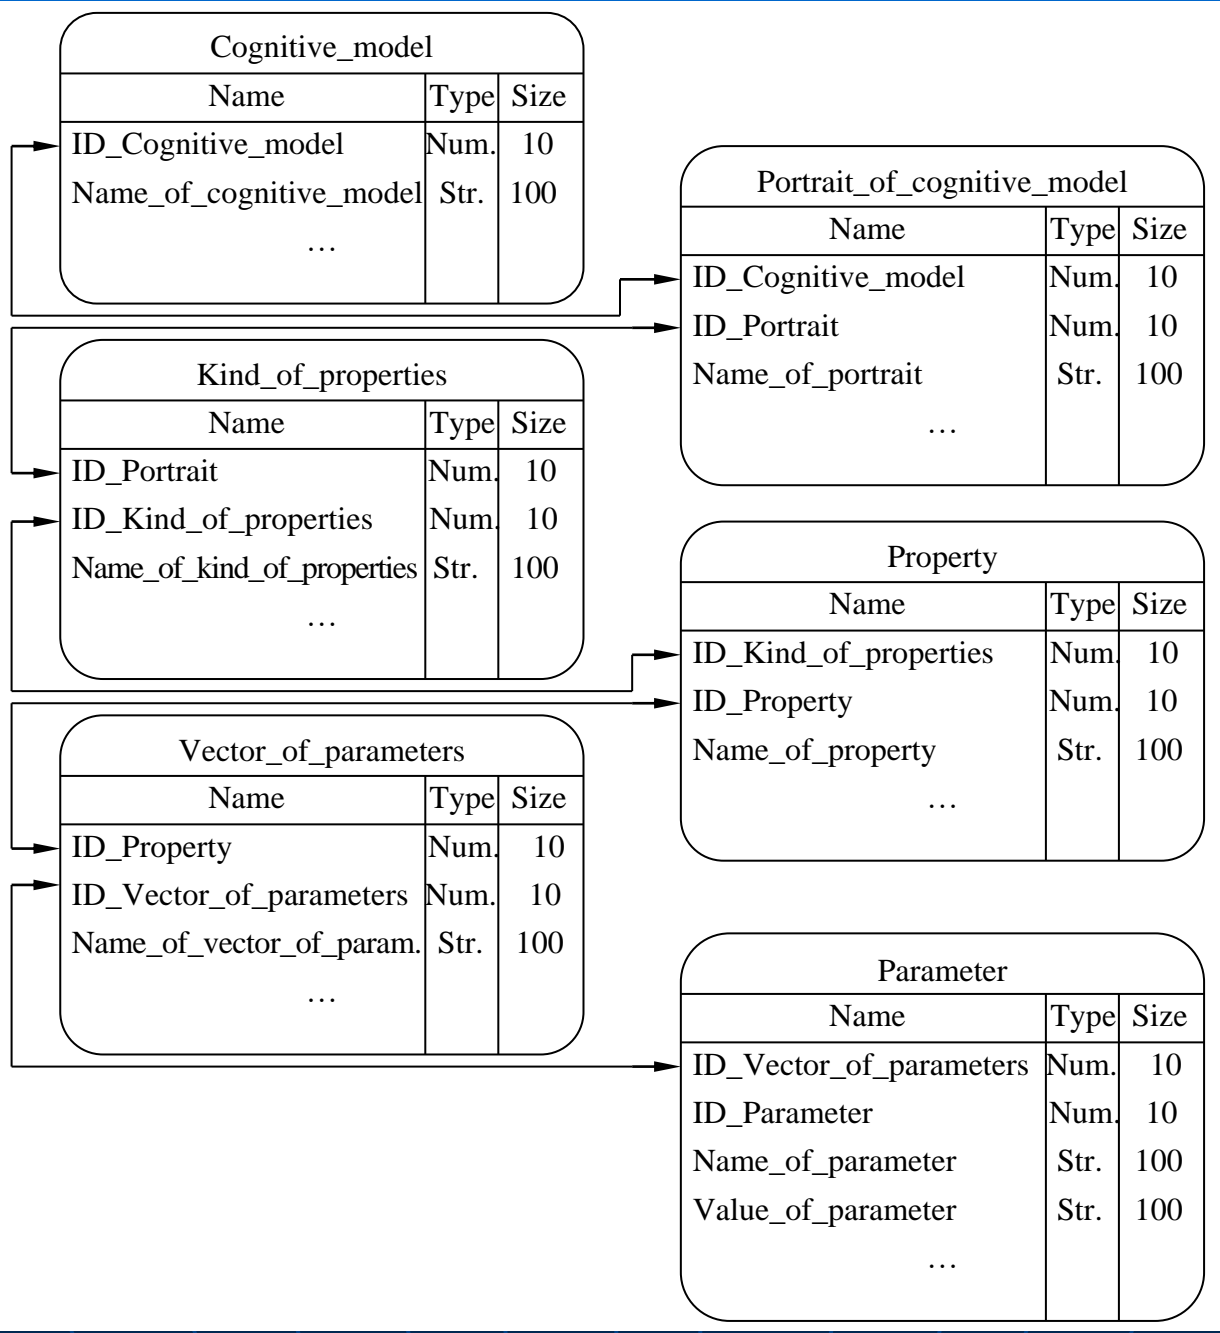

# The recommended basis for the construction of the structure of cognitive model in the view of the structural scheme (without connections between information elements)

At the stage  
of identification

1 Proceeding from the received primary representations, it is required to define the necessary quantity of portraits ( $PR_i$ ) in the base of structure of cognitive model sufficient for the carrying out of the analysis of the object of research, considered in the context of a set of scientific aspects

At the stage  
of conceptualization

2 It is necessary to allocate (to add) a set of kinds of properties ( $KP_j$ ), which characterize the object of research from the point of view of a certain scientific aspect and to bring them in the corresponding portrait ( $PR_i$ ) of cognitive model

On the first  
step

2.1 It is required to characterize each kind of properties ( $KP_j$ ) of the object of research by a set of elementary properties ( $Pr_k$ ): if in the kind of properties it is impossible to mark out the elementary properties, then it is elementary property

On the second  
step

2.2 Each elementary property ( $Pr_k$ ) of the object of research needs to be characterized by the vector of parameters ( $VP_l$ ): if in the elementary property it is impossible to allocate the vector of parameters, then it is the vector of parameters

On the third  
step

2.3 It is required to determine the elementary parameters ( $P_m$ ) entering into the basis of each vector of parameters ( $VP_l$ ): if in the vector of parameters it is impossible to allocate the elementary parameters, then it is elementary parameter

At the stage  
of structuring

3 It is necessary to unite the received results of previous technological stage and to form the structure of cognitive model (newly created or to decompose the existing with taking into account the new components and possible restrictions)

At the stage  
of formalization

4 It is necessary to choose one of the formal (logical, graph, theory of sets and etc.) or informal (conceptual model, ontology of the object of research and etc.) models of representation of structural components of cognitive model

On the first  
step

4.1 It is necessary to create the first level of cognitive model: according to the chosen aspects of research and received earlier results it is necessary to form a set of portraits of CM (I), then to set up a set of kinds of properties (J) and a set of properties (K)

On the second  
step

4.2 It is required to create the second level of cognitive model: it is necessary to add the received structure of cognitive model (the first level), having formed a set of vectors of parameters (L) and having given a set of parameters (M)

At the stage  
of the structural  
analysis

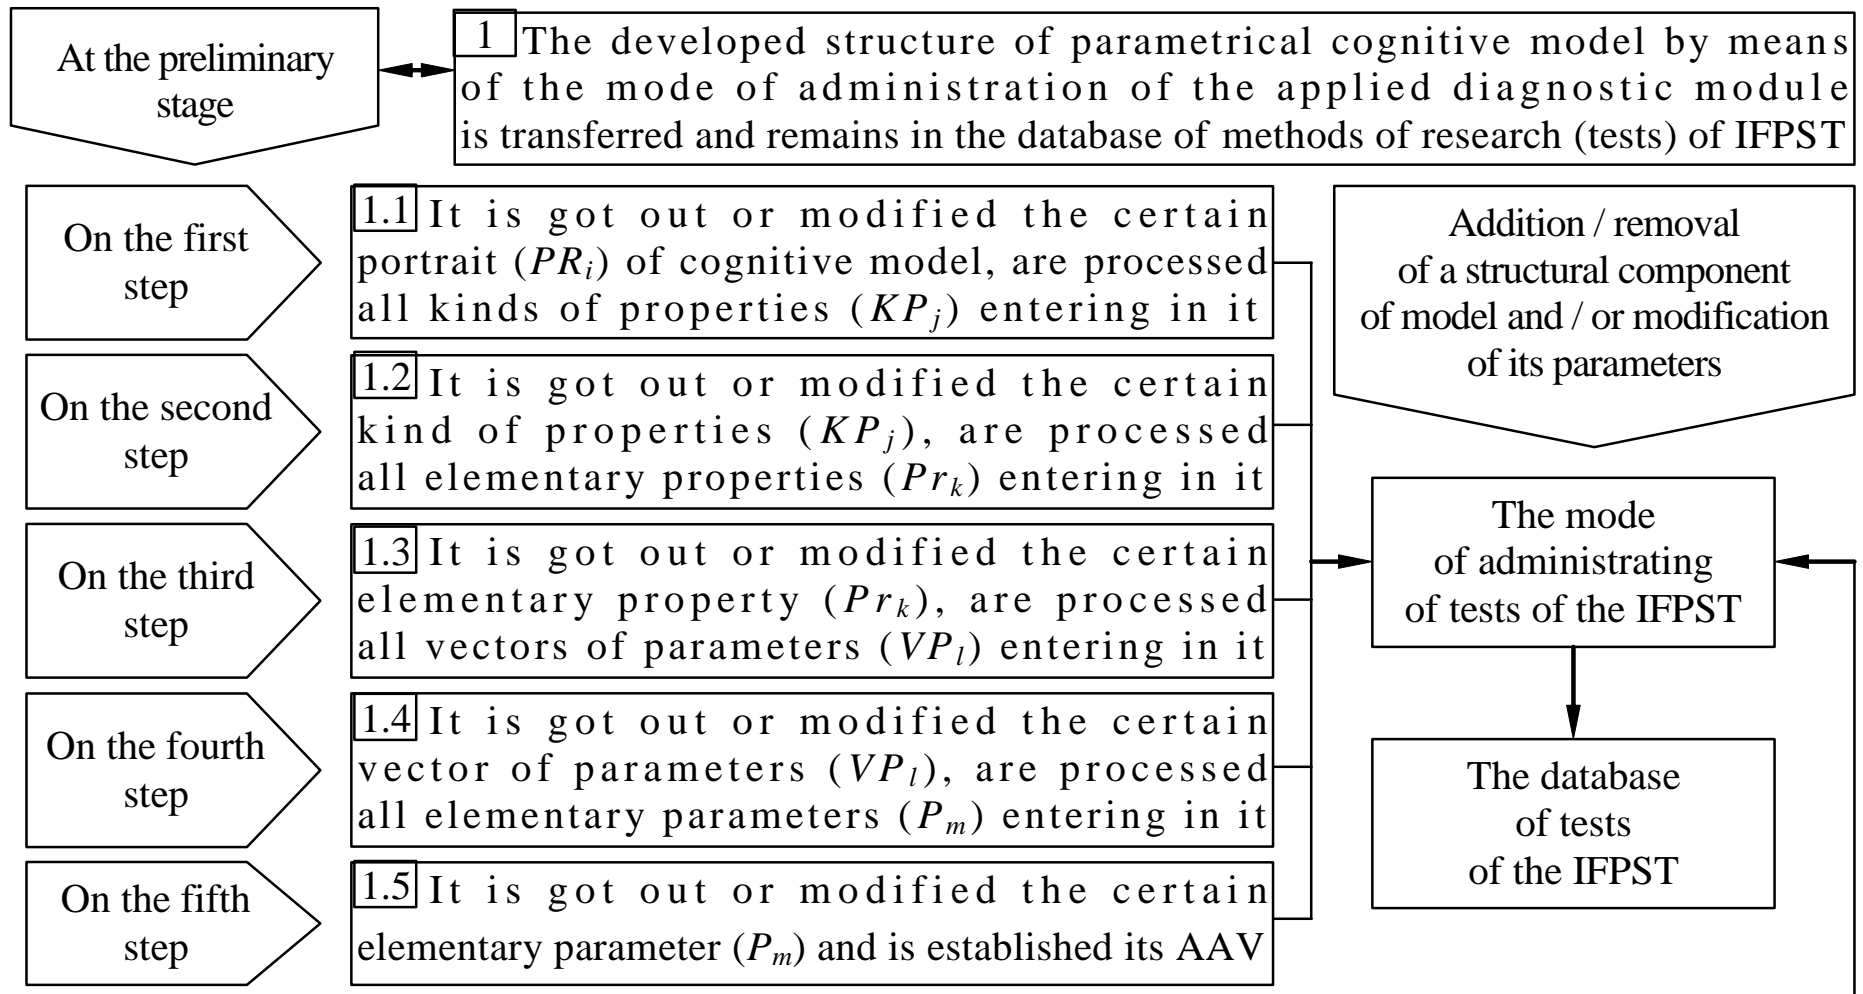

5 It is carried out the system analysis of structure of received cognitive model at the first level – a set of kinds of properties (J) and properties (K): components in a corresponding sets qualitatively characterize the object of research

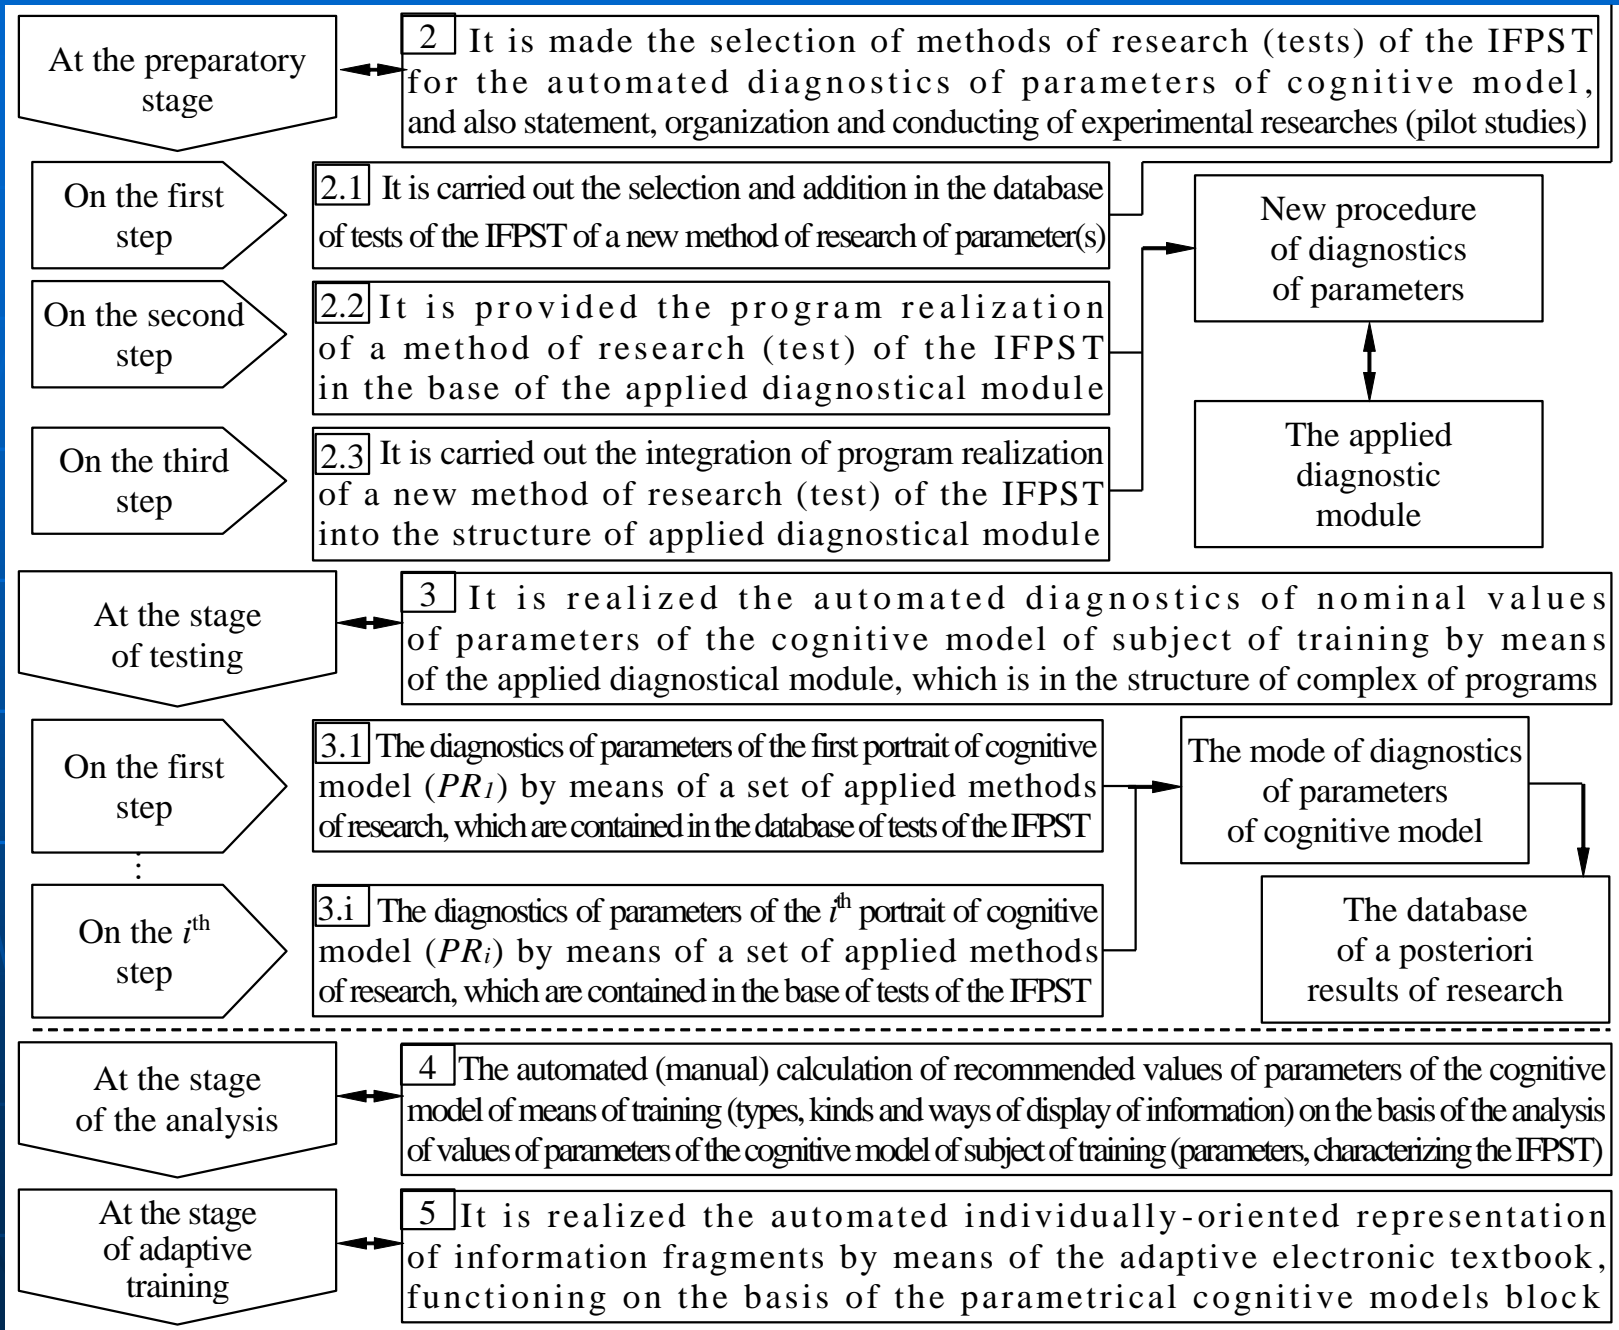

At the stage  
of the parametrical  
analysis

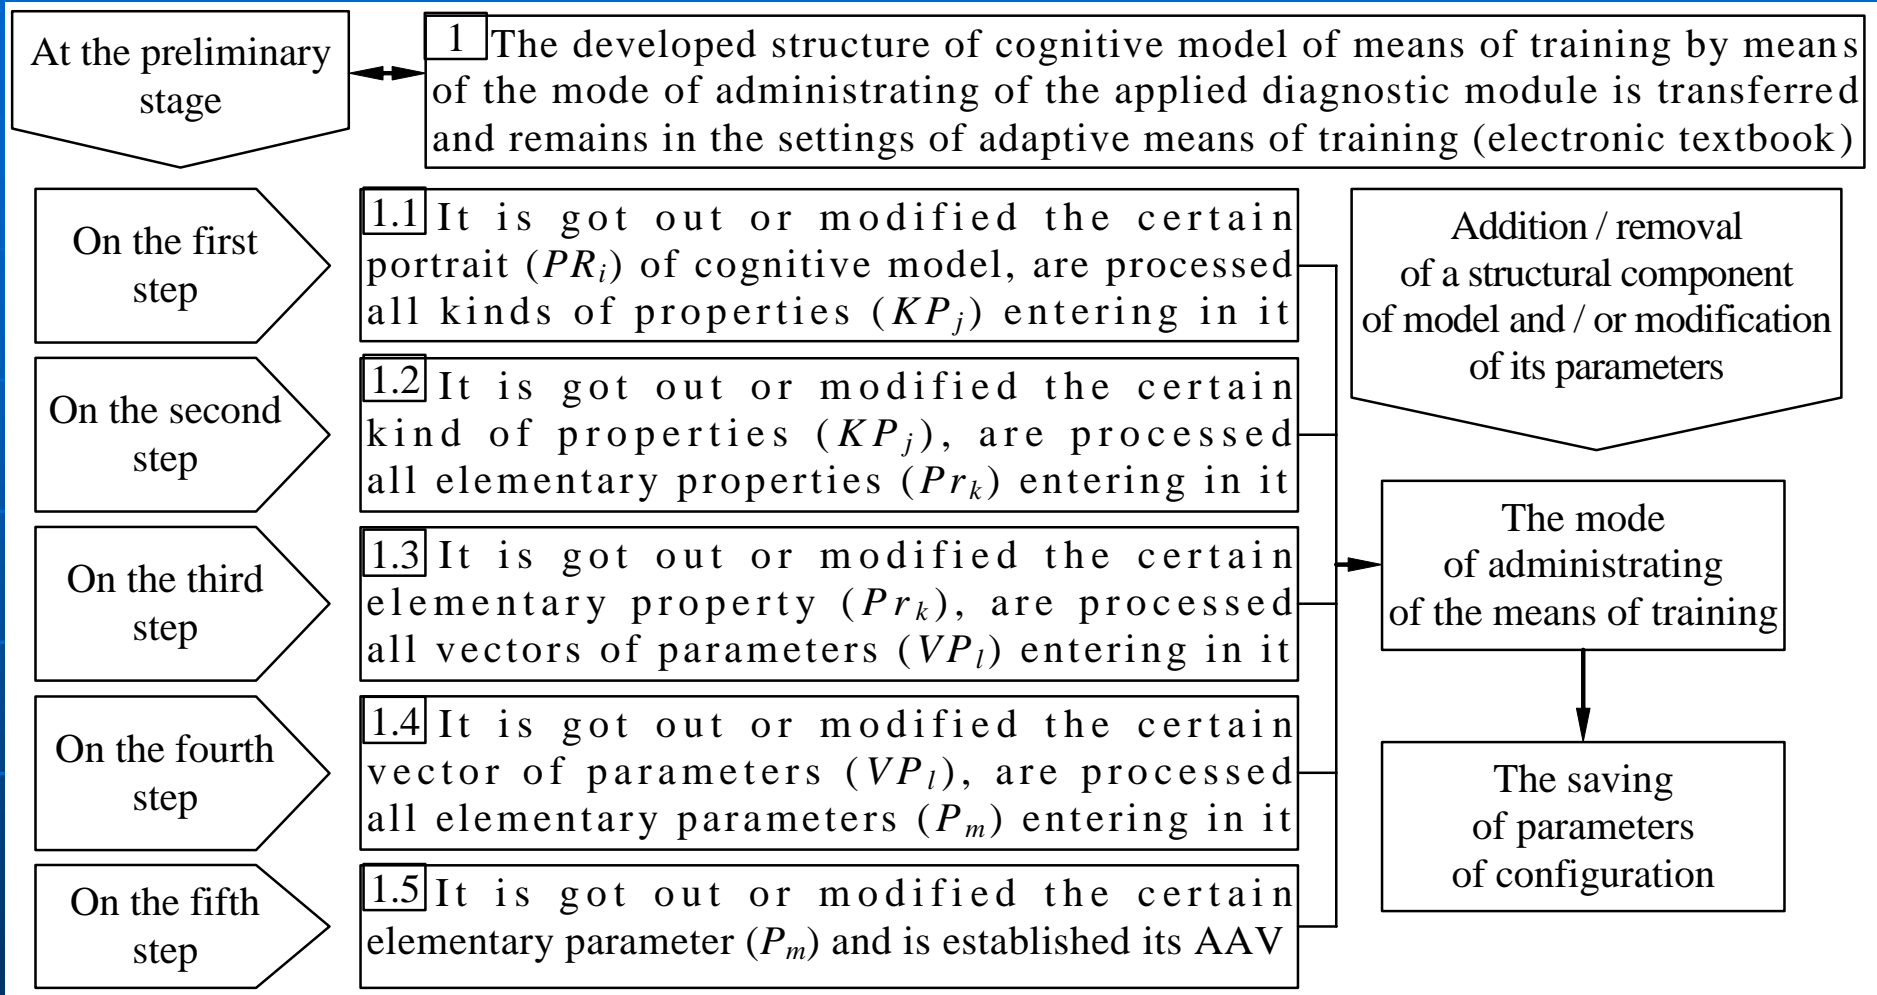

6 It is realized the analysis of structure of received cognitive model at the second level – a sets of vectors of parameters (L) and parameters (M): values of parameters of the second level of structure of cognitive model characterize the IFPST and should not be contradictory

At the stage of realization  
and subsequents

7 It is carried out the encapsulation of received structure of cognitive model in the basis of information-educational environment, the filling of parameters of model by a posteriori data of modeling, their statistical analysis and subject interpretation

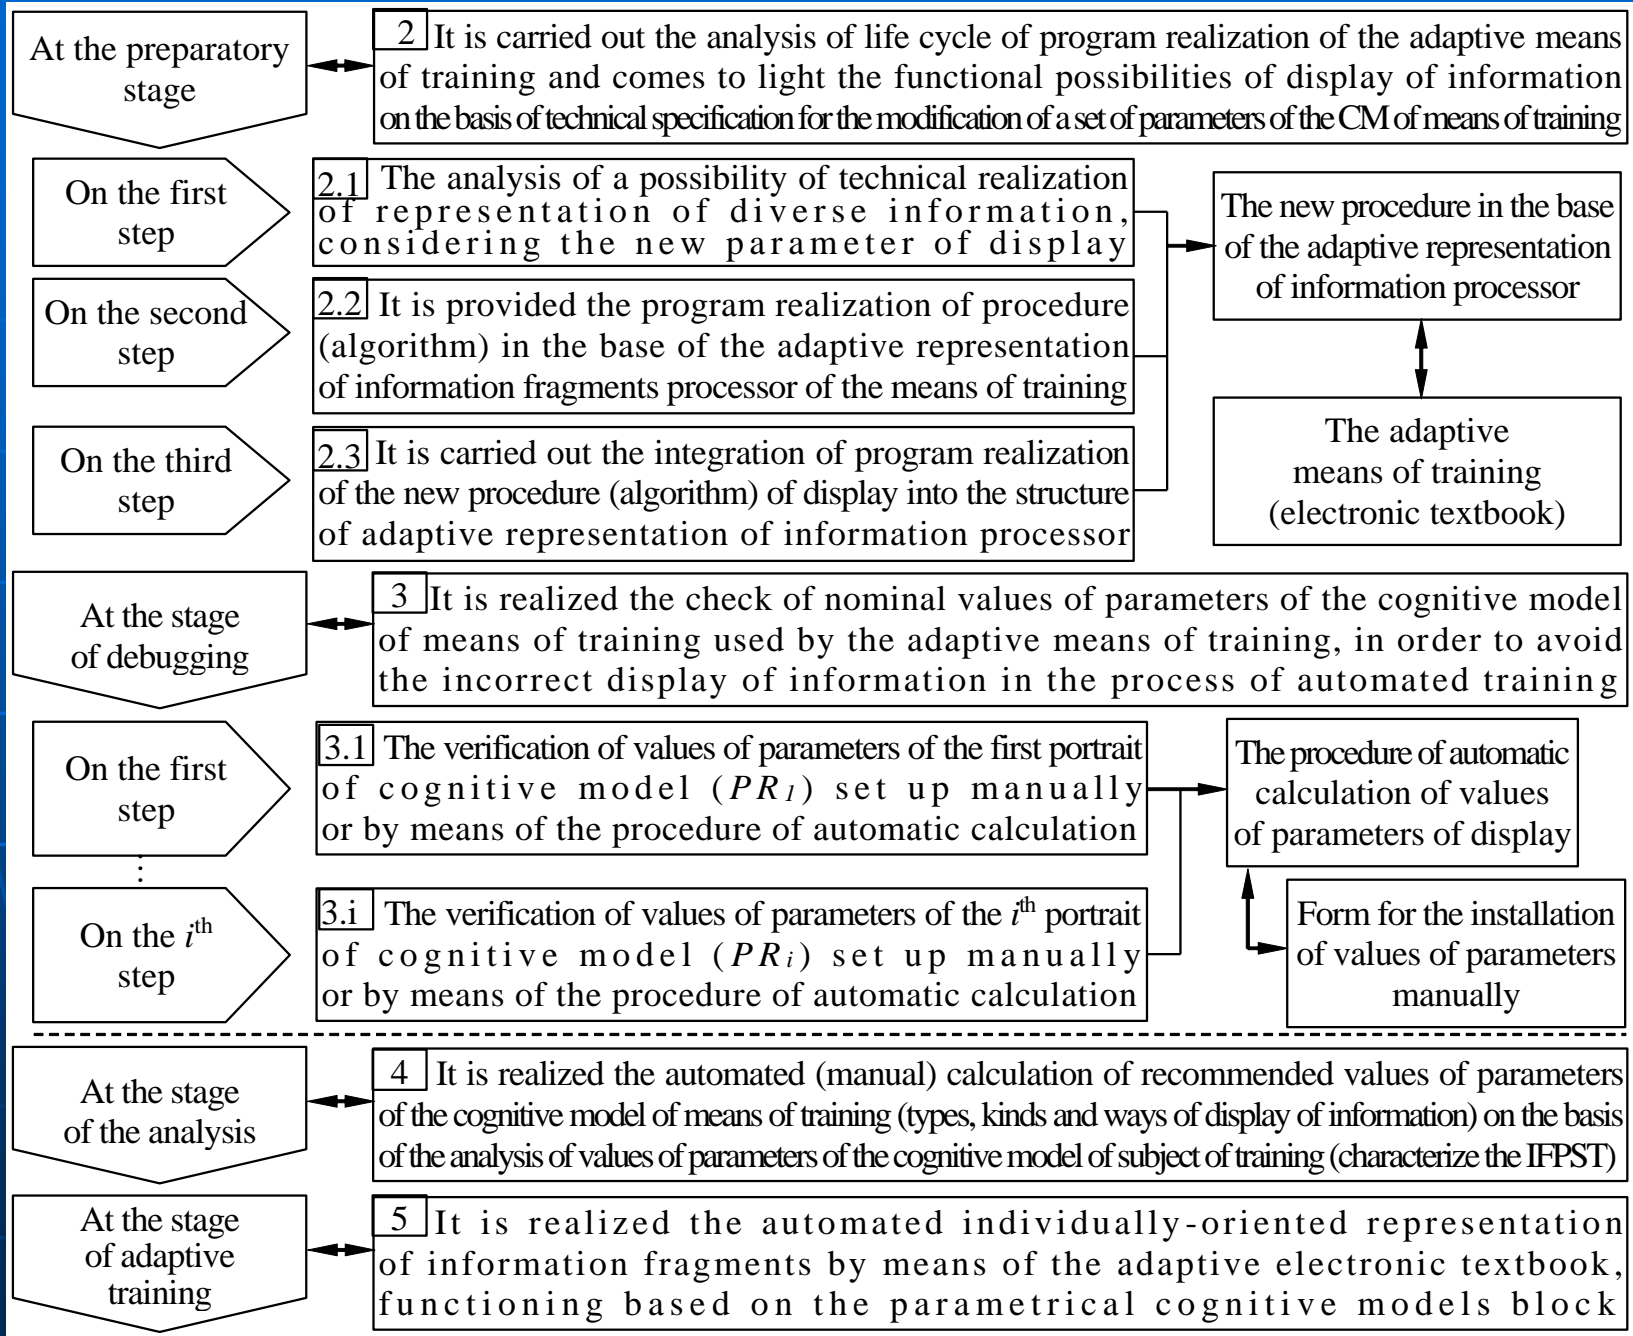

# The technique of research of parameters of the cognitive model of the means of training (2 from 2)

2.6.2

At the preliminary stage

1 In the result of the analysis of question-answers structures of test is reached the calculation of indicators necessary for the conducting of testing: it is formed the interval scale and function of estimation

$$\begin{cases} b_0 = 0; \\ b_{\max} = n \end{cases}$$

On the first step

1.1 It is defined the maximally and minimally possible number of correct answers for the procedure of estimation and formation of function of estimation

On the second step

1.2 There are set up the lower and top threshold values of sums of correct answers (points) for the exposure of corresponding nominal values of estimates

On the third step

1.3 There are formed the intermediate borders of intervals on the basis of sums of correct answers (points) for the set up of intermediate nominal values of estimates (is formed the interval scale of estimation)

On the fourth step

1.4 On the basis of interval scale the function of estimation of the diagnostical module is set up

$$\begin{cases} [b_0 = 0] - mark(nominal) = 1; \\ [b_1, b_2] - mark(nominal) = 2; \\ [b_2, b_3] - mark(nominal) = 3; \\ [b_3, b_4] - mark(nominal) = 4; \\ [b_4, b_5 = n] - mark(nominal) = 5; \\ b_0 < b_1 < b_2 < b_3 < b_4 < b_5 \\ \mu(x) = \begin{cases} 1, b_0 < x < b_1; \\ 2, b_1 < x < b_2; \\ 3, b_2 < x < b_3; \\ 4, b_3 < x < b_4; \\ 5, b_4 < x < b_5 = n; \end{cases} \end{cases}$$

At the stage of testing

2 There is carried out the preparation of software to the testing of target indicators: the interval scale and function of estimation in the mode of administrating is brought for the support of functioning of algorithmic structure

At the stage of the analysis of results

3 The saved-up a posteriori data are exposed to the statistical processing, allowing to carry out the analysis and to formulate the conclusions about current condition (level of residual knowledge of examinee and his personal characteristics)

3.1 The coefficient of difficulty of task, proceeding from which value is defined: at  $K > 0,9$  – the task is difficult, at  $K < 0,2$  – the task is easy

$$K_j = \frac{N_j}{N}$$

3.2 Total result of performance of all tasks by the  $i^{\text{th}}$  examinee

$$y_j = \sum_{j=1}^M x_{ij}$$

3.9 Standard deviation of results of testing on  $j^{\text{th}}$  task

$$\delta_j = \sqrt{\delta_j^2}$$

3.3 Total result of performance of the  $j^{\text{th}}$  task by all examinees

$$x_j = \sum_{i=1}^N x_{ij}$$

3.10 Estim. of conn. of the each  $j^{\text{th}}$  task with the sum of points on all test

$$r_j = \frac{\sum_{i=1}^N (x_{ij} y_i)^2}{N \delta_j^2 \delta_y} - p_j \bar{Y} \cdot \frac{N}{N-1}$$

3.4 Average level of testing on results of performance of all tasks

$$\bar{Y} = \frac{\sum_{i=1}^N y_i}{N}$$

3.11 Average arithmetical of independent expert estimates

$$\bar{Z} = \frac{\sum_{i=1}^N Z_i}{N}$$

$$\delta_Z = \sqrt{\frac{\sum_{i=1}^N (Z_i - \bar{Z})^2}{N-1}}$$

3.5 Average level of performance of  $j^{\text{th}}$  task by all examinees

$$p_j = \frac{x_j}{N}$$

3.12 Standard deviation of expert estimates

3.6 Dispersion of total points of all examinees (subjects of training)

$$\delta_y^2 = \frac{\sum_{i=1}^N (y_i - \bar{Y})^2}{N-1}$$

3.13 Coefficient of correlation of results of testing and independent expert estimates (validity of test)

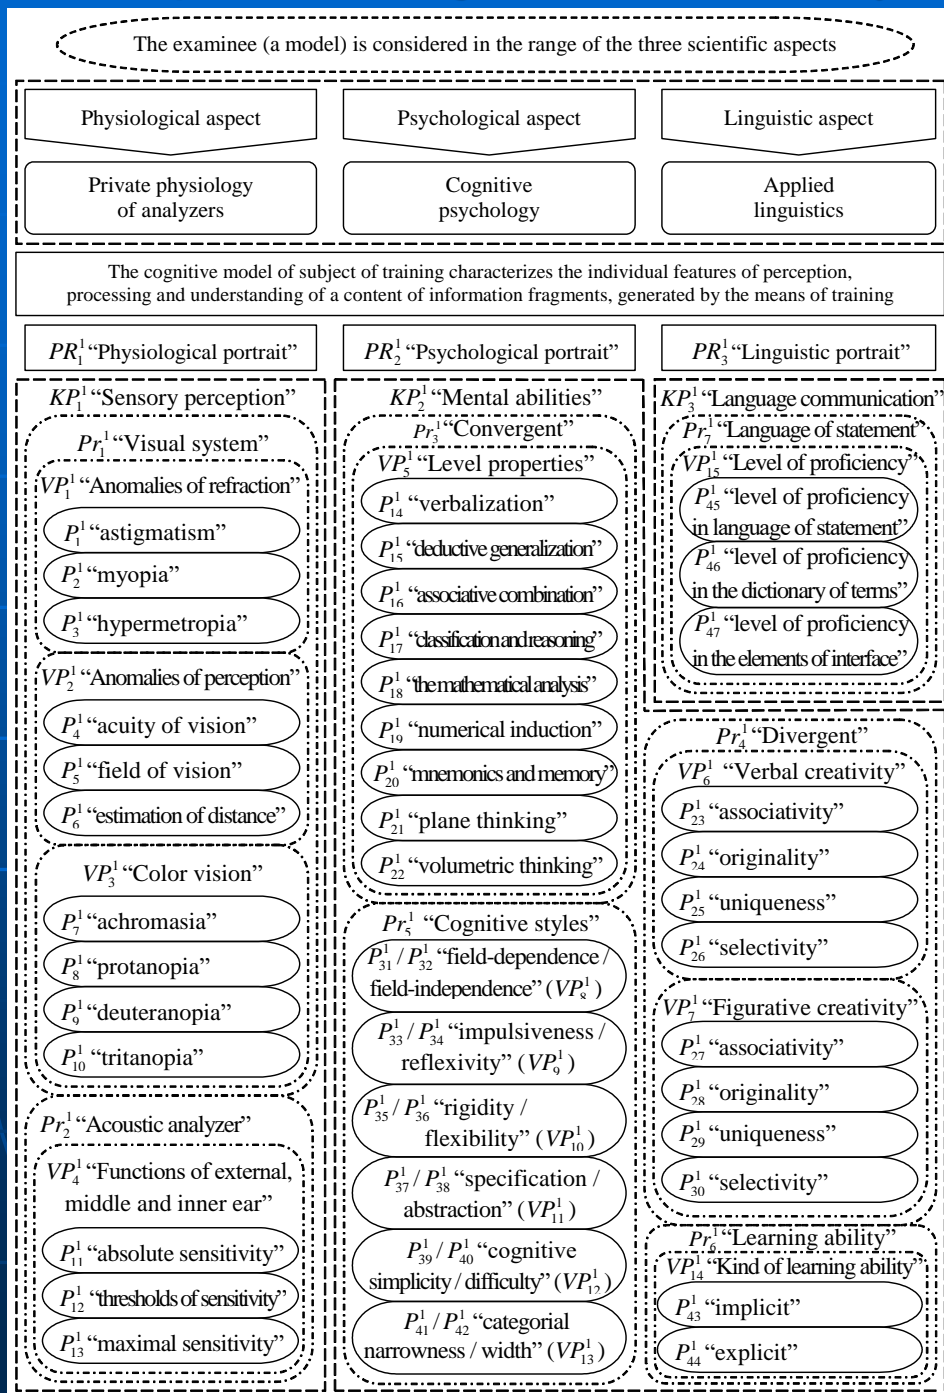

$$V = \frac{\sum_{i=1}^N (Z_i y_i)}{N} - \bar{Z} \bar{Y} \cdot \frac{N}{N-1}$$

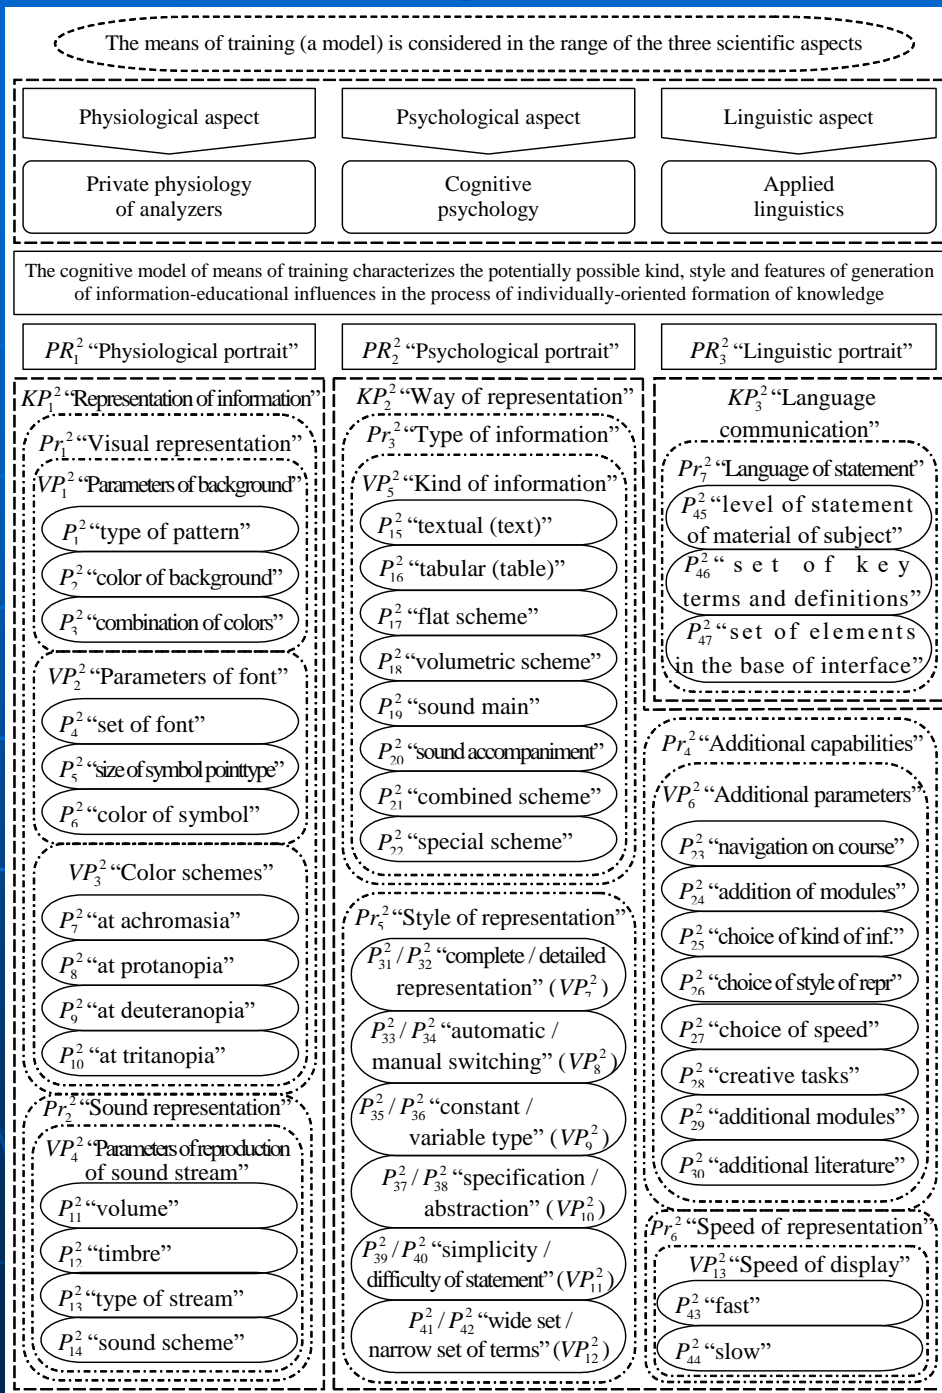

3.7 Standard deviation of total points of examinees

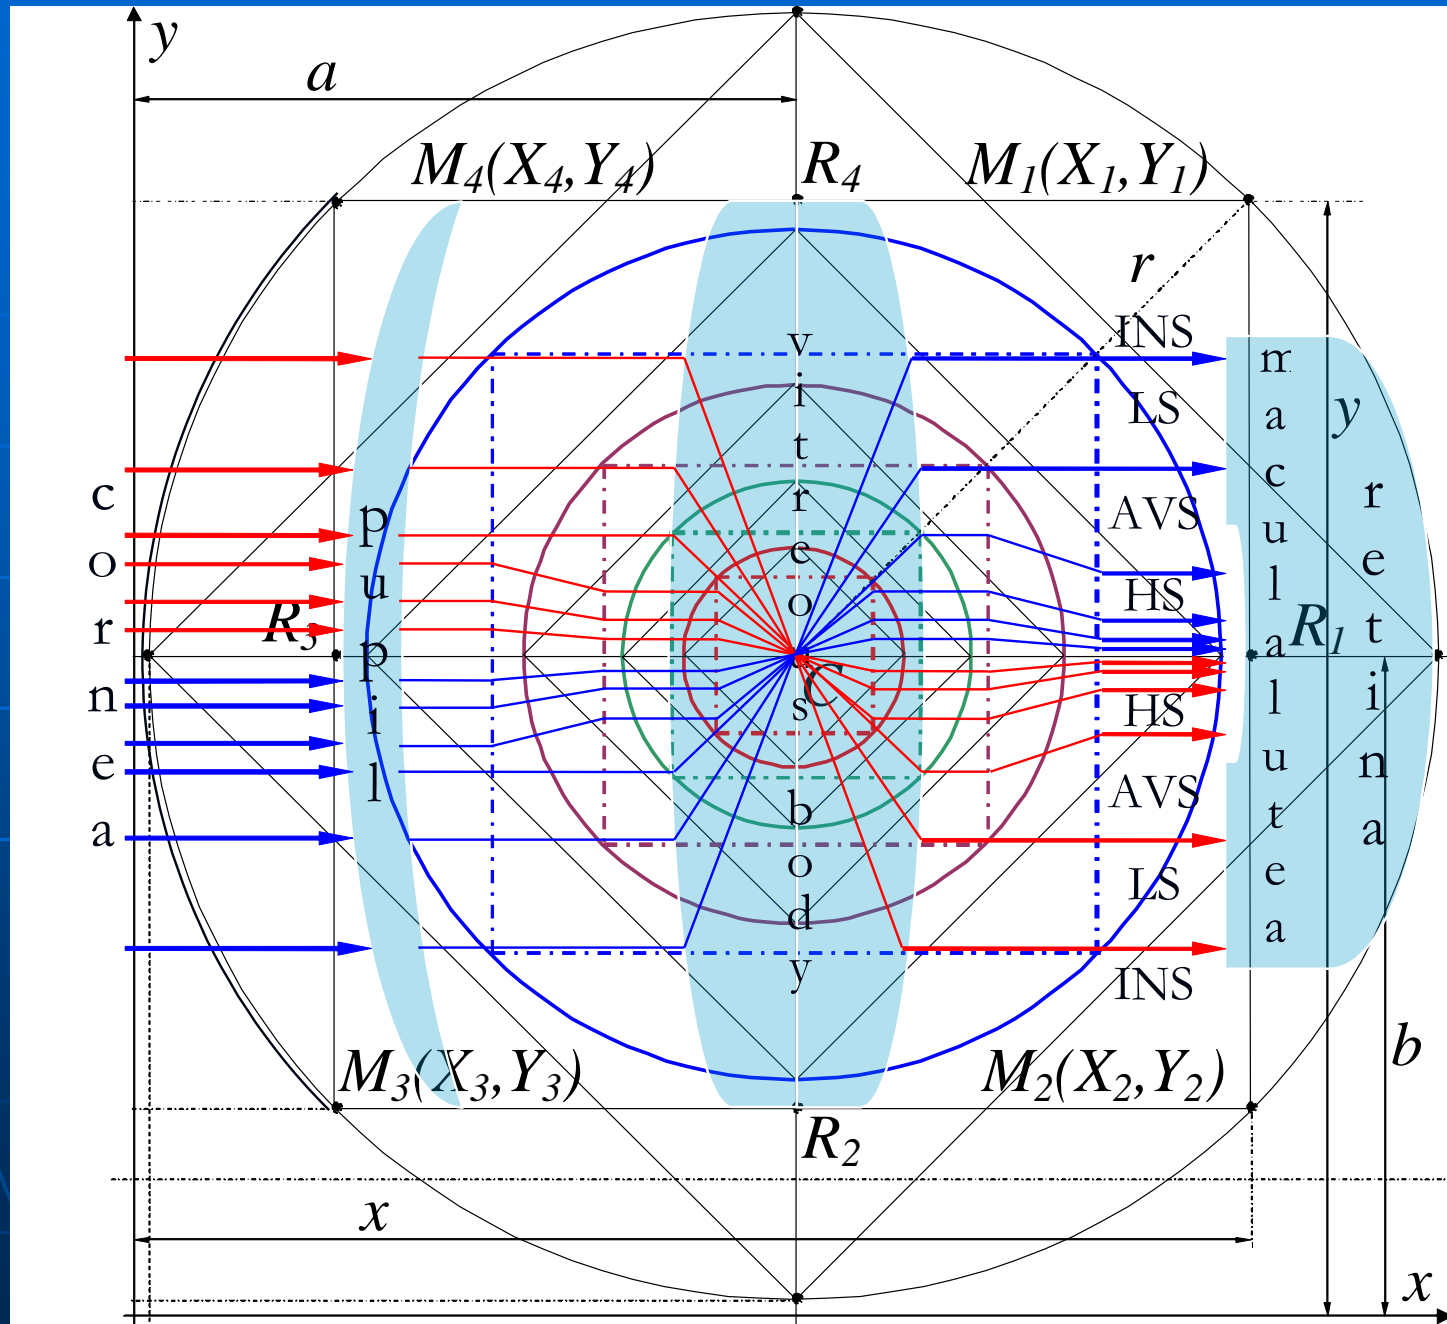

$$\delta_y = \sqrt{\delta_y^2}$$

3.8 Dispersion of results of testing on the  $j^{\text{th}}$  task

$$\delta_j^2 = \frac{\sum_{i=1}^N (x_i - p_j)^2}{N-1}$$

**AL2.4**

The discipline "Computer science" is focused on studying by students the theoretical bases of computer science, information and information interaction. It includes consideration of arithmetic, logic bases of digital automatic devices, tendencies of development of information systems architecture, and also hardware and software of the modern PC. The discipline has a practical orientation on the formation of skills to operate with numbers in various notations and skills of simplification of logic expressions by the development of block diagrams of logic devices.

In computer science the concept "system" is widely distributed and has a set of semantic values. More often it is used with reference to a set of means and programs. As a system the hardware of a computer can refer to. The set of programs for the decision of the concrete applied problems added with the procedures of conducting the documentation and management by calculations can be considered as system also.

Definition:  
SYSTEM is any object which is simultaneously considered as a unit and as the set of diverse elements incorporated for achievement object.

Attributes of system:  
- consists of elements;  
- represents functional unity;  
- occurrence of each element and its performing function is not casual.

Definition  
Magnetic disk is plastic (for flexible disks) either aluminium or ceramic (for hard disks) a circle with magnetic covering. In case of a hard disk such circles can be a little, and all of them in the center are put in one core. For a flexible disk such circle is one, when locating in the disk drive it is fixed in the center. In an operating time the disk is untwisted. The circuit of the disk drive is shown further.  
The head of reading - record can synchronously move in a horizontal and vertical direction (it is shown with arrows) that allows them to come nearer to any point of a surface of a disk. Each point of a surface is considered as a separate bats of external memory.

# The administrating of database with the values of parameters of the param. cogn. models block: the review and modification of the parameters of the cognitive model of the subject of training

4.8.1

The screenshot displays the 'Administration mode' window with several key sections:

- Users Management:** Fields for Code (GR6321), Name (Беляев Н.А.), Password (masked), Gender (male selected), and Age (03). Navigation buttons are present below the Name field.
- Cognitive Model of User:** Divided into Physiological and Psychological portraits.
- Physiological portrait:** Includes visual sensor system parameters (refraction anomalies like Astigmatism, Miopia, Hypermetropia) and color perception (Achromasia, Protanopia, Deuteranopia, Tritanopia).
- Psychological portrait:** Includes mental abilities (convergent abilities like Verbal intelligence, Mnemonic and memory, Deduction, Combination, Reasoning, Analyticity, Induction, Plane thinking, Volumetric thinking) and creativity (Verbal and Visual).
- Kind of training:** Parameters for Fast training (K18) and Slow training (K19).
- Cognitive styles:** Parameters for Field dependence (K20), Impulsiveness (K21), Flexibility (K22), Abstraction (K23), Cognitive complexity (K24), and Concept breadth (K25).
- Linguistic portrait:** Language aspects of communications including Level of mastery (K1), Knowledge of terms (K2), and Knowledge of interface (K3).

Annotations AD6.1 through AD6.4 highlight specific areas: AD6.1 (Code), AD6.2 (Gender), AD6.3 (Navigation buttons), and AD6.4 (Age field).

# The administrating of database with the values of parameters of the param. cogn. models block: the review and modification of the parameters of the cognitive model of the means of training

The screenshot displays the 'Administration mode' window with several key sections:

- User Management:** Fields for Code (GR6321), Name (Грынна 6321), Surname (Беляев Н.А.), Age (03), Password (\*\*\*\*\*), and Gender (male selected).
- Cognitive Model of user:** Includes 'Physiological portrait' (Visual representation parameters like Background, Color, Font) and 'Psychological portrait' (Representation way with sliders for information types).
- Linguistic portrait:** Language aspects of communications with sliders for statement material and key words.
- Navigation and Controls:** A set of buttons (left, right, +, -) and a 'To calculate parameters' button.

Annotations AD6.1 through AD6.5 highlight specific elements: AD6.1 (Code), AD6.2 (Gender), AD6.3 (Navigation buttons), AD6.4 (Navigation buttons), and AD6.5 (To calculate parameters button).

Display/hide control panel

The diagram illustrates the flow of information in a computer system. It features a central dashed box labeled 'Central processing unit (CPU)' containing the 'Arithmetic-logic device (ALD)', 'Memory (RAM): external and internal', and 'Control unit (CU)'. The 'Control unit (CU)' is connected to 'The device of information input (DII)' and 'The device of information output (DIO)'. Numbered arrows indicate the direction of data flow: 1 (DII to RAM), 2 (RAM to CU), 3 (CU to DII), 4 (CU to RAM), 5 (RAM to ALD), 6 (ALD to RAM), 7 (ALD to DIO), 8 (DIO to CU), and 9 (RAM to DIO). Callout boxes E1.1 through E1.9 point to various interface elements and components.

# The interface of the applied diagnostic module in the mode of diagnostics of the achromatic and chromatic field of vision of examinee by means of the computer perimetry

4.20.1

# The scheme, reflecting the sequence of actions for the support of researches of the cycle of adaptive automated training

## The summary results of the mathematical processing of a posteriori data of the experiment (1 from 4)

Previously there was carried out the analysis of the dynamics of a change of the indicator of resultativity of training (LRKT) for the last three years and there was estimated the efficiency of the use of the CMT in the educational process (from 2004-2006 y.), the results of which are presented in the tab. 1.

Table 1

### The results of the preliminary statistical analysis of resultativity of the (adaptive) training

Name of indicator	Number of group of examinees							
	1	2	3	4	5	6	7	8
The indicators of resultativity of the training for 2004 year (without CMT in the three groups, private estimation on the fourth section of discipline "Computer science")								
Quantity of trainees	20	21	25	18	18	15	0	0
Average point $Y_1$	4,05	4,286	4,24	4,611	4,056	4,4	-	-
AQD of average point	0,686	0,845	0,779	0,502	0,802	0,507	-	-
The indicators of resultativity of the training for 2005 year (without CMT in the three groups, private estimation on the fourth section of discipline "Computer science")								
Quantity of trainees	24	22	24	25	24	22	23	21
Average point $Y_2$	4,333	4,046	4,375	4,16	4,042	4,091	4,696	4
AQD of average point	0,817	0,785	0,824	0,8	0,859	0,811	0,559	0,894
The indicators of resultativity of the training for 2006 year (with CMT in the three groups, private estimation on the fourth section of discipline "Computer science")								
Quantity of trainees	26	23	29	24	25	22	22	22
Average point $Y_3$	4,5	4,609	4,379	3,708	3,92	3,773	4,455	3,818

## The summary results of the mathematical processing of a posteriori data of the experiment (2 from 4)

Previously there was carried out the analysis of the dynamics of a change of the indicator of resultativity of training (LRKT) for the last three years and there was estimated the efficiency of the use of the CMT in the educational process (from 2007-2009 y.), the results of which are presented in the tab. 1.

Table 1

### The results of the preliminary statistical analysis of resultativity of the (adaptive) training

Name of indicator	Number of group of examinees							
	1	2	3	4	5	6	7	8
The indicators of resultativity of the training for 2007 year (with CMT in the three groups, private estimation on the fourth section of discipline "Computer science")								
Quantity of trainees	21	16	17	23	21	16	20	18
Average point $Y_3$	4,524	4,5	4,588	4,174	4,571	4,375	3,9	3,167
AQD of average point	0,680	0,633	0,507	0,778	0,507	0,619	0,968	0,384
The indicators of resultativity of the training for 2008 year (with CMT in the three groups, private estimation on the fourth section of discipline "Computer science")								
Quantity of trainees	17	20	19	18	20	18	15	18
Average point $Y_3$	4,588	4,550	4,684	4,167	4,45	4,778	3,933	4,111
AQD of average point	0,507	0,759	0,582	0,707	0,686	0,428	0,799	0,758
The indicators of resultativity of the training for 2009 year (with CMT in the three groups, private estimation on the fourth section of discipline "Computer science")								
Quantity of trainees	15	14	14	14	14	14	18	-
Average point $Y_3$	4,6	4,571	4,714	4	4,357	4,786	3,944	-
AQD of average point	0,507	0,756	0,469	0,679	0,633	0,426	0,725	-

1. As the result of the carried-out regression analysis the received values of coefficient of multiple correlation (CMC) and coefficient of multiple determination (CMD) demonstrate, that **minimum 38,9%** (at the reduced set of predictors and the rough scale of estimation on the basis of the sum of the correct answers the questions) and **maximum 59,0%** (at the full set of predictors and the exact scale of estimation on the basis of the sum of the gained points) of dispersion of dependent variable Y (estimation of the LRKT) is defined by the variation of the values of the reduced and full set of independent variables of the linear regression model  $Y(K_i)$ .
2. As predictors in the received linear multiple regression model is accepted the reduced (Age,  $K_7$ ,  $K_8$ ,  $K_9$ ,  $K_{14}$ ,  $K_{15}$ ,  $K_{16}$ ,  $K_{17}$ ,  $K_{18}$ ,  $K_{19}$ ,  $K_{20}$ ,  $K_{21}$ ,  $K_{22}$ ,  $K_{23}$ ,  $K_{24}$ ,  $K_{25}$ ,  $K_{27}$ ,  $K_{28}$ ,  $K_{29}$ ,  $K_{45}$ ) and the full set (Age, RU, LIT, LG, HIS, GEO, BIO, ALG, GEOM, FIZ, CHE, SCH, AST,  $K_7$ ,  $K_8$ ,  $K_9$ ,  $K_{14}$ ,  $K_{15}$ ,  $K_{16}$ ,  $K_{17}$ ,  $K_{18}$ ,  $K_{19}$ ,  $K_{20}$ ,  $K_{21}$ ,  $K_{22}$ ,  $K_{23}$ ,  $K_{24}$ ,  $K_{25}$ ,  $K_{27}$ ,  $K_{28}$ ,  $K_{29}$ ,  $K_{45}$ ,  $L_{31N}$ ,  $L_{36N}$ ,  $L_{37}$ ,  $L_{38N}$ ) of independent variables (predictors), and as the factor (dependent variable) directly supports the resultativity of technological process of controlled formation of knowledge Y ( $Y_2$  – the estimation of LRKT on the rough scale on the basis of the sum of the correct answers the questions and  $Y_4$  – the estimation of LRKT on the exact scale on the basis of the sum of the gained points for each correct variant of answer the question).

During the regression analysis the equations of multiple regression are received:

$$Y_2 = 2,545 - 0,012 \text{Age} + 0,031 K_7 + 0,020 K_8 - 0,029 K_9 + 0,057 K_{14} - 0,017 K_{15} - 0,019 K_{16} - 0,017 K_{17} + 0,038 K_{18} + 0,012 K_{19} + 0,015 K_{20} + 0,030 K_{21} - 0,003 K_{22} - 0,031 K_{23} + 0,004 K_{24} - 0,005 K_{25} + 0,075 K_{27} - 0,035 K_{28} + 0,006 K_{29} + 0,037 K_{45}, \text{ CMC} = \mathbf{0,389}, \text{ CMD} = \mathbf{0,151}.$$

$$Y_4 = 4,924 - 0,108 \text{Age} + 0,028 K_7 + 0,005 K_8 - 0,025 K_9 + 0,016 K_{14} - 0,038 K_{15} - 0,016 K_{16} - 0,003 K_{17} + 0,038 K_{18} - 0,015 K_{19} + 0,021 K_{20} + 0,068 K_{21} - 0,019 K_{22} - 0,040 K_{23} - 0,015 K_{24} + 0,008 K_{25} + 0,090 K_{27} - 0,096 K_{28} + 0,020 K_{29} + 0,075 K_{45}, \text{ CMC} = \mathbf{0,509}, \text{ CMD} = \mathbf{0,259}.$$

$$Y_2 = 0,824 - 0,008 \text{Age} - 0,161 \text{RU} + 0,049 \text{LIT} + 0,147 \text{LG} + 0,244 \text{HIS} - 0,128 \text{GEO} - 0,008 \text{BIO} + 0,040 \text{ALG} + 0,120 \text{GEOM} - 0,100 \text{FIZ} - 0,077 \text{CHE} + 0,148 \text{SCH} + 0,041 \text{AST} + 0,030 K_7 + 0,021 K_8 - 0,035 K_9 + 0,067 K_{14} - 0,005 K_{15} - 0,034 K_{16} - 0,022 K_{17} + 0,040 K_{18} + 0,006 K_{19} + 0,007 K_{20} + 0,027 K_{21} + 0,000 K_{22} - 0,022 K_{23} - 0,003 K_{24} - 0,003 K_{25} + 0,062 K_{27} - 0,046 K_{28} + 0,008 K_{29} + 0,028 K_{45} + 0,087 L_{31N} - 0,020 L_{36N} + 0,025 L_{37} - 0,003 L_{38N}, \text{ CMC} = \mathbf{0,491}, \text{ CMD} = \mathbf{0,241}.$$

$$Y_4 = 3,035 - 0,098 \text{Age} - 0,106 \text{RU} + 0,034 \text{LIT} - 0,015 \text{LG} - 0,111 \text{HIS} - 0,077 \text{GEO} - 0,021 \text{BIO} + 0,259 \text{ALG} - 0,142 \text{GEOM} + 0,171 \text{FIZ} + 0,142 \text{CHE} + 0,024 \text{SCH} + 0,332 \text{AST} + 0,015 K_7 - 0,002 K_8 - 0,022 K_9 + 0,011 K_{14} - 0,035 K_{15} - 0,021 K_{16} + 0,003 K_{17} + 0,034 K_{18} - 0,021 K_{19} + 0,007 K_{20} + 0,055 K_{21} - 0,013 K_{22} - 0,050 K_{23} - 0,023 K_{24} + 0,011 K_{25} + 0,136 K_{27} - 0,089 K_{28} + 0,001 K_{29} + 0,097 K_{45} + 0,033 L_{31N} - 0,019 L_{36N} + 0,014 L_{37} + 0,005 L_{38N}, \text{ CMC} = \mathbf{0,590}, \text{ CMD} = \mathbf{0,348}.$$

In the equations of multiple regression the following designations are used (see the slide 3.1 – the CM of subject of training and see the slide 3.2 – the CM of means of training): Age – age, RU – estimation of LRKT in Russian language, LIT – estimation of LRKT in literature, LG – estimation of LRKT in foreign (English) language, HIS – estimation of LRKT in history, GEO – estimation of LRKT in geography, BIO – estimation of LRKT in biology, ALG – estimation of LRKT in algebra, GEOM – estimation of LRKT in geometry, FIZ – estimation of LRKT in physics, CHE – estimation of LRKT in chemistry, SCH – estimation of LRKT in drawing, AST – estimation of LRKT in astronomy,  $K_7 = \Pi_7^1$  – achromasia,  $K_8^1 = \Pi_8^1$  – protanopia,  $K_9^1 = \Pi_9^1$  – deuteranopia,  $K_{10}^1 = \Pi_{10}^1$  – tritanopia,  $K_{14}^1 = \Pi_{14}^1$  – verbalization (logical selection),  $K_{15}^1 = \Pi_{15}^1$  – deductive generalization (search of general signs),  $K_{16}^1 = \Pi_{16}^1$  – associative combinatory,  $K_{17}^1 = \Pi_{17}^1$  – classification and reasoning,  $K_{18}^1 = \Pi_{18}^1$  – the mathematical analysis (arithmetic abilities),  $K_{19}^1 = \Pi_{19}^1$  – numerical induction (recombining of numbers),  $K_{20}^1 = \Pi_{20}^1$  – mnemonics and memory (storing),  $K_{21}^1 = \Pi_{21}^1$  – plane thinking,  $K_{22}^1 = \Pi_{22}^1$  – volumetric imagination (volumetric thinking),  $K_{23}^1 = \Pi_{23}^1$  – verbal associativity,  $K_{24}^1 = \Pi_{24}^1$  – verbal originality,  $K_{25}^1 = \Pi_{25}^1$  – verbal uniqueness,  $K_{26}^1 = \Pi_{26}^1$  – verbal selectivity,  $K_{27}^1 = \Pi_{27}^1$  – figurative associativity,  $K_{28}^1 = \Pi_{28}^1$  – figurative originality,  $K_{29}^1 = \Pi_{29}^1$  – figurative uniqueness,  $K_{30}^1 = \Pi_{30}^1$  – figurative selectivity,  $K_{45}^1 = \Pi_{21}^1$  – level of proficiency in language of statement,  $L_{31N} = \Pi_2^2$  – color of background,  $L_{36N} = \Pi_4^2$  – set of font,  $L_{37} = \Pi_5^2$  – size of pointtype of symbol  $L_{38N} = \Pi_6^2$  – color of symbol (the specified and other parameters of the parametrical CM block are located in the database with a posteriori results of research of LRKT and IFPST).

The discriminant analysis allows to receive the own values of canonical functions and the chart of relative arrangement of the centroids of the classes, selected on the indicator of resultativity of the training, allowing to provide the evident interpretation of the differences between the classes of excellent, good, mediocre and poor pupils on the basis of a set of the values of parameters in the parametrical CM block (the CM of subject of training and the CM of means of training), which essential for the analysis of efficiency of a formation of knowledge of trainees in the IEE of the ART.

Table 2

**The own values for the canonical functions (Eigenvalues)**

The reduced set of independent variables $K_i$ and dependent variable $Y_2$					The reduced set of independent variables $K_i$ and dependent variable $Y_4$				
Function	Own value	Share of dispersion	Saved-up dispersion	Correlation	Function	Own value	Share of dispersion	Saved-up dispersion	Correlation
1	0,183	51,6	51,6	0,393	1	0,414	76,6	76,6	0,541
2	0,131	37,2	88,8	0,341	2	0,082	15,3	91,9	0,276
3	0,040	11,2	100,0	0,196	3	0,044	8,1	100,0	0,205
The full set of independent variables $K_i$ and dependent variable $Y_2$					The full set of independent variables $K_i$ and dependent variable $Y_4$				
Function	Own value	Share of dispersion	Saved-up dispersion	Correlation	Function	Own value	Share of dispersion	Saved-up dispersion	Correlation
1	0,350	52,9	52,9	0,509	1	0,582	67,8	67,8	0,607
2	0,206	31,1	84,0	0,413	2	0,169	19,6	87,4	0,380
3	0,106	16,0	100,0	0,309	3	0,108	12,6	100,0	0,313

The informativity of the presented canonical functions is approximately equal.

# The results of the discriminant analysis (2 from 2): the position of centroids of classes in the space of two discriminant functions

The graphical interpretation allows to analyze the received canonical functions and visually to estimate the quality of classification by the density of the distribution of the objects inside class.

a

b

c

d

## The results of the multidimensional scaling

5.5.1

Multidimensional scaling allowed to reflect the geometrical place of points of the reduced (a – method ALSCAL, c – method PROXSCAL) and the full set (b – method ALSCAL, d – method PROXSCAL) of independent variables in space of two scales by means of two specified methods.

a

b

c

d

The geometrical location of the reduced set (a) and the full set (b) of independent variables in space of three components forming several locality is received.

# The dynamics of the indicators of efficiency (resultativity) of the technological process of controlled formation of knowledge of trainees (1 from 2)

The dynamics of indicators of resultativity of training for 6 years (2004-2009 y.) is presented.

The statistical analysis of a posteriori data received at the practical use of results of research in the learning process of “The Saint-Petersburg state electrotechnical university "LETI"” and “The international banking institute” allow to draw the following conclusions:

- the effective use of CMT in the automated IEE assumes the modification of the IEE of the ART and the modernization of electronic means of training and TMM of different appointment;
- the degree of influence of the parameters of CM on efficiency (resultativity) of process of training (formation of knowledge) depends on the contingent of trainees and has individual character;
- the increase of efficiency of formation of knowledge of trainees with the use of CMT is defined by the opportunities of means of IEE, the content of ET containing the structured information on the cycle of disciplines is adequate to the purposes of training, varied according to the algorithms in the basis of various components, techniques, learning plans and working programs.

In my scientific works and the next report on SRW “The research of the information environment of the automated training with properties of adaptation based on the cognitive models and the financial analysis of the organization by means of cognitive modeling technology” for 2006-2008 y., which is carried out in the process of writing of dissertation, on fact of the difficult theoretical and practical scientific-technical work:

- the CMT for the system analysis of IEE and the increase of efficiency of the system of ART is created – this dissertation;
- the aggregate of CMT for the financial analysis of organizational structure is developed – the dissertation on spec. 08.00.10 – “Finance, monetary circulation and credit” is formed.
